1	Introduction to Computational Meso-Bio-Nano (MBN) Science and MBN EXPLORER	1
1.1	Meso-Bio-Nano Science: A Novel Field of Interdisciplinary Research.	1
1.1.1	Structure and Dynamics of MBN Systems	2
1.1.2	Clustering, Self-organisation and Structure Formation in MBN Systems	7
1.1.3	Novel Materials	10
1.1.4	Novel Technologies	12
1.1.5	Multiscale Nature of MBN Systems	14
1.2	Computational Approaches in MBN Science	16
1.2.1	Quantum Atomic and Nanoscales	16
1.2.2	Classical Nano- and Mesoscales	17
1.2.3	Monte Carlo Approach and Finite Element Method	21
1.2.4	<i>MBN EXPLORER</i> —A Universal Multiscale Approach	24
1.3	Basics of MBN EXPLORER and MBN STUDIO	25
1.3.1	<i>MBN EXPLORER</i> Main Features.	29
1.3.2	Areas of Application of <i>MBN EXPLORER</i>	30
1.3.3	<i>MBN STUDIO</i> Main Features.	36
2	Theoretical Approaches for Multiscale Computer Simulations	43
2.1	Hierarchy of Theoretical Methods and Their Limitations: ab initio Methods and Model Approaches	43
2.2	Methods for Studying Dynamical Molecular Processes and Related Phenomena.	46
2.2.1	Newtonian Dynamics	47
2.2.2	Relativistic Dynamics	47
2.2.3	Rigid Body Dynamics.	48
2.2.4	Temperature Control.	49

2.3	Modeling Interatomic Interactions	53
2.3.1	Pairwise Potentials	53
2.3.2	Many-Body Potentials.	59
2.4	Studying Biomolecules: The Force Field Concept and Beyond	64
2.4.1	Molecular Mechanics Force Field.	64
2.4.2	Rupture of Covalent Bonds.	67
2.4.3	Rupture of Valence Angles.	69
2.4.4	Rupture of Dihedral Interactions.	70
2.4.5	Formation of New Bonds	71
2.4.6	Partial Charges Redistribution.	72
2.5	Multiscale Methods	72
2.5.1	Kinetic Monte Carlo Method	73
2.5.2	Simplifications of the KMC Method.	75
2.5.3	Particle Dynamics Model	76
2.5.4	Irradiation Driven Molecular Dynamics	78
2.6	Computational Aspects of Multi-particle Simulations.	80
2.6.1	Basic Interaction Approach.	80
2.6.2	Linked Cell Interaction Approach.	81
2.6.3	Boundary Conditions	84
2.6.4	Calculation of Coulomb Interactions.	88
3	Computational Modelling of MBN Systems	97
3.1	Introduction	97
3.2	MBN STUDIO Toolkit	101
3.2.1	Basic Structure of <i>MBN STUDIO</i>	101
3.2.2	Visualisation of the Results.	105
3.2.3	Modeling MBN Systems.	106
3.3	Modeling of Crystalline Structures.	108
3.3.1	Specific Features of Crystalline Structures	108
3.3.2	Simulation of Crystalline Structures with <i>MBN STUDIO</i>	111
3.4	Modelling of Liquids	113
3.4.1	Liquids in <i>MBN STUDIO</i>	113
3.4.2	Analysing Simulations with <i>MBN STUDIO</i>	115
3.5	Modelling of Gases	116
3.6	Modelling of Material Interphases	119
4	Atomic Clusters and Nanoparticles	121
4.1	Introduction	121
4.2	The Problem of Global Minimum	124
4.2.1	Cluster Fusion Process	125
4.2.2	Scenarios for Cluster Fusion Process	126
4.2.3	Selection Criteria for Cluster Fusion Process	127

4.3	Noble Gas Clusters	127
4.3.1	Mass Spectra and Sequence of Magic Numbers	128
4.3.2	Fusion of Global Energy Minimum Clusters.	129
4.3.3	Cluster Binding Energies	136
4.3.4	Cluster Magic Numbers	139
4.4	Metal Clusters	144
4.4.1	Structure and Properties of Small Metal Clusters	144
4.4.2	Accounting for Many-Body Interactions	147
4.4.3	Validation of Classical Description of Systems on the Atomic Scale	149
4.5	Carbon Clusters: Fullerenes	153
4.5.1	Classical Approach to Formation and Fragmentation of Fullerenes	155
4.5.2	Electronic Structure Versus Geometry	160
4.6	Deposited Clusters and Nanoparticles	165
4.6.1	Liquid Drop Model Versus MD for a Cluster on a Surface	165
4.6.2	Shell-Correction Approach to Semi-spheroidal Atomic Clusters	168
5	Biomolecular Systems	171
5.1	Introduction	171
5.2	Phase and Structural Transitions in Polypeptide Chains	172
5.2.1	Statistical Model for The α -Helix \leftrightarrow Random Coil Phase Transition	173
5.2.2	Energetics of Alanine Polypeptide	175
5.2.3	Correlation of Different Amino Acids in the Polypeptide	185
5.2.4	Molecular Dynamics Simulations of π -Helix \leftrightarrow Random Coil Phase Transition	186
5.3	DNA Unzipping	189
5.3.1	Methods of Simulations	191
5.3.2	Modeling the DNA Duplex Unzipping	193
6	Nanostructured Materials	199
6.1	Introduction	199
6.2	Modeling Carbon Nanostructures	201
6.2.1	Carbon Allotropes	201
6.2.2	Carbon Nanotubes and Their Basic Properties	203
6.2.3	Molecular Dynamics of Carbon Nanotube Growth	210
6.3	Stability and Fragmentation of Metal Nanowires	214
6.3.1	Using KMC Method of MBN EXPLORER to Model Nanowire Fragmentation	215
6.3.2	Results of Simulation	216

6.4	Crystalline Superlattice of Nanoparticles	220
6.4.1	C ₆₀ Crystals and Nanowires	220
6.4.2	Modeling C ₆₀ -TMB Superlattice	220
6.4.3	Asymmetric Growth of the C ₆₀ -TMB Superlattice	223
6.4.4	Outlook for Modeling Other Superlattices	228
6.5	Self-assembly, Growth, Surface Pattern Formation.	228
6.5.1	Silver Nanoparticle Self-assembly on a Graphite Surface	229
6.5.2	Comparison of 3D with 2D Morphologies on a Surface	232
6.6	Nanofractals and Morphological Transitions	237
6.6.1	Experimental Observation and Characterization of Morphological Transition	239
6.6.2	Theoretical Description of Morphological Transition	242
7	Composite Systems and Material Interfaces	255
7.1	Introduction	255
7.2	Nanoparticles in Biological Environments	256
7.2.1	Radiosensitizing Nanoparticles	256
7.2.2	Simulation of Coated Gold Nanoparticles in Water Environment.	257
7.3	Nanoalloys and Composite Metal Systems.	262
7.3.1	Many-Body Potentials for Nanoalloys and Composite Systems	262
7.3.2	Modeling Titanium and Nickel-Titanium Samples	264
7.4	Atomic, Molecular and NP Diffusion.	265
7.4.1	Basics of the Diffusion Process.	266
7.4.2	Diffusion at Ti-Ni Interfaces	268
7.4.3	Diffusion of Nickel Cluster at the Interface of Titanium and Water	269
7.5	Diffusion at Interfaces	271
7.5.1	Theoretical and Computational Aspects	271
7.5.2	Results of Numerical Simulations.	274
8	Thermo-Mechanical Properties of Materials.	277
8.1	Introduction	277
8.2	Simulation of Thermo-Mechanical Properties Up to the Bulk Limit	279
8.2.1	Modification of the EAM Potential.	280
8.2.2	Simulations of Metal Melting with the Modified EAM potential	282

8.3	Nanoindentation	286
8.3.1	Modeling the Crystals and the Indenter	288
8.3.2	Simulation of the Nanoindentation Process	289
8.3.3	Quantification of Mechanical Properties	292
8.4	Nanoscale Phase Transitions	295
8.4.1	Melting Phase Transitions on the Nanoscale	295
8.4.2	Martensite-Austenite Phase Transition on the Nanoscale	307
8.5	Thermodynamic Model for Protein Folding	310
8.5.1	Theoretical Methods	312
8.5.2	Verification of the Model Through Experiment	317
9	Collisional Processes Involving MBN Systems	323
9.1	Introduction	323
9.2	Collision Processes Involving Atomic Clusters and NPs	326
9.3	Collision Processes Involving Biomolecules	335
9.3.1	Electrons and Biomolecular Interactions	337
9.3.2	Ions and Biomolecular Interactions	339
9.4	Particles Propagation Through Medium	345
9.5	Collision Induced Fragmentation Processes	352
9.5.1	Water Splitting	353
9.5.2	Fragmentation of Alanine Dipeptide	356
9.5.3	Binding of Two Alanine Amino Acids	357
9.6	Molecular Desorption Processes	359
9.7	Thermo-Mechanical Effects in Collision Processes	362
9.7.1	Hydrodynamic Expansion on the Nanometre Scale	363
9.7.2	MD Simulations of Ion-induced Shock Waves in Biological Media	364
9.7.3	Damaging Effects Due to Shock Waves	366
9.7.4	Evaluation of the Shock Wave damaging effect	368
9.7.5	Transport of Reactive Species by the Radial Collective Flow	370
10	Novel and Emerging Technologies	373
10.1	Introduction	373
10.2	Crystalline Undulator as a Novel Light Source	374
10.3	Fundamental Nanoscopic Processes in Ion Beam Cancer Therapy	384
10.3.1	Basic Facts About Ion Beam Cancer Therapy	384
10.3.2	Multiscale Scenario of Radiation Damage	388

10.4	Surface Deposition Technologies: The Case of FEBID	390
10.4.1	Surface Deposition Techniques and Irradiation Driven Chemistry	390
10.4.2	Modeling of FEBID with IDMD	392
10.4.3	Results of Simulations and Their Validation.	397
11	Future Outlook	403
11.1	State-of-the-art and Outlook	403
11.2	Further Development of MBN EXPLORER and MBN STUDIO	404
11.3	How to Get MBN EXPLORER and MBN STUDIO?	408
	References	411
