1	Introduction	1
1.1	Backgrounds	1
1.2	Major Issues on Slip Resistance Measurements	4
1.3	Surface Finishes Versus Slip Resistance Performance	6
1.4	Wear Development Versus Slip Resistance Performance	6
1.5	Optimal Floor Surface Finishes	8
1.6	Major Significances and Contributions	8
1.7	Specific Aims	9
1.8	Limitations	10
1.9	Summary	11
	References	12
2	Pedestrian Fall Incidence and Slip Resistance Measurements	17
2.1	Brief Overview of Slip and Fall Incidences	17
2.2	Injuries Owing to Slips and Falls	18
2.3	Improvements of Fall Prevention	19
2.4	Factors Influencing Pedestrian Fall Incidence	20
	2.4.1 Intrinsic Fall Risk Factors	21
	2.4.2 Extrinsic Fall Risk Factors	22
	2.4.3 Mechanics of Human Walking	22
2.5	Human Gait and Its Impacts on Fall Incidents	23
2.6	Observation of Human Gait	25
2.7	Gait Analysis and Fall Risk Prediction	26
2.8	Measuring Devices for Slip Resistance Properties	28
	2.8.1 Articulated Strut Devices	28
	2.8.2 Drag and Towed-Sled Devices	28
	2.8.3 Pendulum Type Devices	31
	2.8.4 Other Type Devices	31
	2.8.5 Slip Measuring Testers Used in This Book	34
	2.8.6 Comparisons of Slip Measuring Devices	37

2.9	Testing Standards and Safety Criteria for Slip Resistance	
	Performance	39
2.9.1	Slip Resistance Test Methods and Safety Criteria	39
2.9.2	Undependable Test Methods and Removed Standards.	46
2.9.3	Clean and Dry and Wet Slip Resistance Measurements	47
2.10	Relationships Between Human Gait and Slip Resistance	
	Properties	50
2.11	Chapter Summary	54
	References.	55
3	Pedestrian Slip Resistance Measurements: Verities and Challenges	67
3.1	Introduction	67
3.2	Brief Overview	68
3.3	Theoretical Backgrounds	70
3.4	Mislead Issues on Slip Resistance Measurements	72
3.5	Definition of a COF	73
3.6	Friction Development Between Two Solid Surfaces	75
3.7	What Does a COF Quantity Mean?—Misconception and Restraint	79
3.8	A Concept of Average COF—Case Study No. 1	80
3.9	A Concept of Average COF—Case Study No. 2	82
3.10	Issues of Frictional Force and Heel Strike Angle	84
	3.10.1 Frictional Force	84
	3.10.2 Heel Strike Angle	87
3.11	Maintenance Issues.	88
3.12	Conclusions	89
3.13	Chapter Summary	90
	References.	91
4	Tribological Approaches for the Pedestrian Safety Measurements and Assessments	95
4.1	Introduction	95
4.2	Tribo-Physical Approaches	95
	4.2.1 Overview.	95
	4.2.2 Limitations and Issues.	96
	4.2.3 Main Problems	100
4.3	Studies on Surface Roughness Measurements.	102
	4.3.1 Background.	102
	4.3.2 Measuring Devices for Surface Roughness	104
4.4	Understanding of the Shoe-Floor Sliding Friction Interface	106
	4.4.1 Significance of Friction Process.	107

4.4.2	Measuring Slipperiness	107
4.4.3	Measuring Devices for Slip Resistance	108
4.5	Basic Tribology for the Shoe-Floor Sliding	
	Friction Mechanism	109
4.5.1	Pedestrian Slip Resistance Requirements	109
4.5.2	Shoe-Floor Friction and COF Measurements	109
4.5.3	Function of Shoes on Slip Resistance	110
4.5.4	Function of Floors on Slip Resistance	110
4.5.5	Factors Affecting Film Formations	111
4.6	Slip Resistance Measurement and Reaction	112
4.7	Conflict over Slip Resistance, Hygiene, and Maintenance	113
4.8	Chapter Summary	114
	References	114
5	Friction and Wear Mechanisms	121
5.1	Introduction	121
5.2	Friction Mechanism	122
	5.2.1 Definition of Friction	122
	5.2.2 The Laws of Friction	123
	5.2.3 The Origins of Friction	126
5.3	Friction Mechanism at the Shoe-Floor Sliding Interface	133
	5.3.1 Introduction	133
	5.3.2 Adhesion Component	134
	5.3.3 Deformation Component	137
5.4	Wear Mechanism	139
	5.4.1 Introduction	139
	5.4.2 Main Considerations	139
5.5	Wear Model for the Shoe-Floor Sliding Friction System	141
5.6	Chapter Summary	144
	References	145
6	Surface Measurement and Analysis	149
6.1	Introduction	149
6.2	Nature of Surfaces and Their Contact Mechanism	150
	6.2.1 Fundamental Concepts	150
	6.2.2 Contact Mechanism Between Two Surfaces	151
	6.2.3 Simple Theory of Rough Surface Contact	152
	6.2.4 Statistical Theories of Rough Surface Contact	155
6.3	Some Geometrical Properties of Surface Texture	157
	6.3.1 Introduction	157
	6.3.2 Surface Texture	157
6.4	Measurement of Surface Topography	160
	6.4.1 Surface Texture Analysis	160
	6.4.2 Surface Profilometry	160

6.4.3	Laser Scanning Confocal Microscope	165
6.5	Importance of Surface Analysis for Slip Resistance Assessment	169
6.6	Effects of Surface Roughness on Slip Resistance Performance	170
6.7	Quantifying Surface Roughness	171
6.7.1	Introduction	171
6.7.2	Measuring Lengths	172
6.7.3	Reference Line	172
6.7.4	Traditional Surface Roughness Parameters	173
6.8	Statistical Analysis of Surface Finishes.	174
6.8.1	Background	174
6.8.2	Statistical Analysis of Surface Roughness	175
6.8.3	Height Distribution of Surface Texture	175
6.8.4	Spatial Distribution of Surface Texture	182
6.8.5	Hybrid Parameters	183
6.9	Relationships Amongst Surface Roughness Parameters	185
6.10	Surface Analysis for the Shoe-Floor Friction System	186
6.11	Development of a Contact Model Between the Shoe and Floor Surface	187
6.11.1	Introduction	187
6.11.2	Main Hypotheses for Contact Model Development	188
6.11.3	Model Development	190
6.12	Conclusions	192
6.13	Chapter Summary	193
	References	194
7	A Practical Design Search for Optimal Floor Surface Finishes—A Case Study	199
