

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Space, Geometry, and Linear Algebra	1
1.2	Vectors as Geometrical Objects	2
1.3	Differentiable Manifolds: First Contact	3
1.4	Digression on Notation and Mappings	6
	References	8
<b>2</b>	<b>Notes on Point Set Topology</b>	9
2.1	Preliminary Remarks and Basic Concepts	9
2.2	Topology in Metric Spaces	10
2.3	Topological Space: Definition and Basic Notions	15
2.4	Connectedness, Compactness, and Separability	17
2.5	Product Spaces and Product Topologies	19
2.6	Further Reading	21
	References	22
<b>3</b>	<b>The Finite-Dimensional Real Vector Space</b>	23
3.1	Definitions	23
3.2	Linear Independence and Basis	25
3.3	Some Common Examples for Vector Spaces	28
3.4	Change of Basis	29
3.5	Linear Mappings Between Vector Spaces	30
3.6	Linear Forms and the Dual Vector Space	32
3.7	The Inner Product, Norm, and Metric	35
3.8	The Reciprocal Basis and Its Relations with the Dual Basis	37
	References	40
<b>4</b>	<b>Tensor Algebra</b>	41
4.1	Tensors and Multi-linear Forms	41
4.2	Dyadic Product and Tensor Product Spaces	43
4.3	The Dual of a Linear Mapping	46

4.4	Remarks on Notation and Inner Product Operations . . . . .	46
4.5	The Exterior Product and Alternating Multi-linear Forms . . . . .	48
4.6	Symmetric and Skew-Symmetric Tensors . . . . .	50
4.7	Generalized Kronecker Symbol . . . . .	51
4.8	The Spaces $\mathcal{A}^k\mathcal{V}$ and $\mathcal{A}^k\mathcal{V}^*$ . . . . .	52
4.9	Properties of the Exterior Product and the Star-Operator . . . . .	53
4.10	Relation with Classical Linear Algebra . . . . .	55
	References . . . . .	57
<b>5</b>	<b>Affine Space and Euclidean Space . . . . .</b>	<b>59</b>
5.1	Definitions and Basic Notions . . . . .	59
5.2	Alternative Definition of an Affine Space by Hybrid Addition . . . . .	61
5.3	Affine Mappings, Coordinate Charts and Topological Aspects . . . . .	62
	References . . . . .	67
<b>6</b>	<b>Tensor Analysis in Euclidean Space . . . . .</b>	<b>69</b>
6.1	Differentiability in $\mathbb{R}$ and Related Concepts Briefly Revised . . . .	69
6.2	Generalization of the Concept of Differentiability . . . . .	72
6.3	Gradient of a Scalar Field and Related Concepts in $\mathbb{R}^N$ . . . . .	73
6.4	Differentiability in Euclidean Space Supposing Affine Relations . . . . .	77
6.5	Characteristic Features of Nonlinear Chart Relations . . . . .	84
6.6	Partial Derivatives as Vectors and Tangent Space at a Point . . . .	86
6.7	Curvilinear Coordinates and Covariant Derivative . . . . .	89
6.8	Differential Forms in $\mathbb{R}^N$ and Integration . . . . .	93
6.9	Exterior Derivative and Stokes' Theorem in Form Language . . . .	95
	References . . . . .	98
<b>7</b>	<b>A Primer on Smooth Manifolds . . . . .</b>	<b>99</b>
7.1	Introduction . . . . .	99
7.2	Basic Concepts Regarding Analysis on Surfaces in $\mathbb{R}^3$ . . . . .	103
7.3	Transition to Smooth Manifolds . . . . .	108
7.4	Tangent Bundle and Vector Fields . . . . .	109
7.5	Flow of Vector Fields and the Lie Derivative . . . . .	114
7.6	Outlook and Further Reading . . . . .	118
	References . . . . .	119
	<b>Solutions for Selected Problems . . . . .</b>	<b>121</b>
	<b>Index . . . . .</b>	<b>123</b>

Fundamentals of Tensor Calculus for Engineers with a  
Primer on Smooth Manifolds

Mühlich, U.

2017, XII, 125 p. 23 illus., Hardcover

ISBN: 978-3-319-56263-6
