|          |                                                                      |    |
|----------|----------------------------------------------------------------------|----|
| <b>1</b> | <b>Introduction</b>                                                  | 1  |
| <b>2</b> | <b>Lagrangian Mechanics</b>                                          | 5  |
| 2.1      | Lagrangian Mechanical Systems<br>and their Equations of Motion       | 5  |
| 2.2      | Integrals of Motion                                                  | 10 |
| 2.3      | Motion in a Radial Potential                                         | 14 |
| 2.3.1    | Motion in Newton's Gravitational Potential                           | 16 |
| <b>3</b> | <b>Hamiltonian Mechanics</b>                                         | 19 |
| 3.1      | Symplectic Geometry and Hamiltonian Systems                          | 19 |
| 3.2      | Relation between Lagrangian and Hamiltonian Systems                  | 21 |
| 3.2.1    | Hamiltonian Formulation for the Lagrangian Systems<br>of Example 2.3 | 22 |
| 3.2.2    | The Legendre Transform                                               | 23 |
| 3.3      | Linearization and Stability                                          | 29 |
| <b>4</b> | <b>Hamilton–Jacobi Theory</b>                                        | 37 |
| <b>5</b> | <b>Classical Field Theory</b>                                        | 47 |
| 5.1      | The Lagrangian, the Action and the Euler–Lagrange<br>Equations       | 47 |
| 5.2      | Automorphisms and Conservation Laws                                  | 52 |
| 5.3      | Why are Conservation Laws called Conservation Laws?                  | 60 |
| 5.4      | Examples of Field Theories                                           | 61 |
| 5.4.1    | Sigma Models                                                         | 62 |
| 5.4.2    | Pure Yang–Mills Theory                                               | 64 |
| 5.4.3    | The Einstein–Hilbert Lagrangian                                      | 72 |
| 5.5      | The Energy-Momentum Tensor                                           | 76 |
