1	Mathematics in Laser Processing	1
	John Dowden	
1.1	Mathematics and Its Application.	1
1.2	Formulation in Terms of Partial Differential Equations.	3
1.2.1	Length Scales	3
1.2.2	Rectangular Cartesian Tensors.	4
1.2.3	Conservation Equations and Their Generalisations	7
1.2.4	Governing Equations of Generalised Conservation Type.	9
1.2.5	Gauss's Law	13
1.3	Boundary and Interface Conditions.	14
1.3.1	Generalised Conservation Conditions	14
1.3.2	The Kinematic Condition in Fluid Dynamics	19
1.4	Fick's Laws	20
1.5	Electromagnetism	21
1.5.1	Maxwell's Equations	21
1.5.2	Ohm's Law	23
	References.	24
2	Simulation of Laser Cutting	25
	Wolfgang Schulz, Markus Nießen, Urs Eppelt and Kerstin Kowalick	
2.1	Introduction	26
2.1.1	Physical Phenomena and Experimental Observation . . .	28
2.2	Mathematical Formulation and Analysis.	31
2.2.1	The One-Phase Problem	33
2.2.2	The Two-Phase Problem	46
2.2.3	Three-Phase Problem.	54
2.3	Outlook.	68
	References.	69

3	Glass Cutting	73
	Wolfgang Schulz	
3.1	Introduction	74
3.2	Phenomenology of Glass Processing with Ultrashort Laser Radiation	74
3.3	Modelling the Propagation of Radiation and the Dynamics of Electron Density.	76
3.4	Radiation Propagation Solved by BPM Methods	77
3.5	The Dynamics of Electron Density Described by Rate Equations.	77
3.6	Properties of the Solution with Regard to Ablation and Damage	79
3.7	Electronic Damage Versus Thermal Damage	82
3.8	Glass Cutting by Direct Ablation or Filamentation?	86
	References.	87
4	Keyhole Welding: The Solid and Liquid Phases	89
	Alexander Kaplan	
4.1	Heat Generation and Heat Transfer.	89
4.1.1	Absorption.	89
4.1.2	Heat Conduction and Convection	91
4.2	Steady State 3D-Solutions Based on Moving Point Sources of Heat	92
4.3	Steady State 2D-Heat Conduction from a Moving Cylinder at Constant Temperature.	94
4.4	Sophisticated Quasi-3D-Model Based on the Moving Line Source of Heat	96
4.4.1	Surface Convection and Radiation.	97
4.4.2	Phase Transformations.	98
4.4.3	Transient and Pulsed Heat Conduction	99
4.5	Model for Initiation of Laser Spot Welding	99
4.5.1	Geometry of the Liquid Pool.	101
4.6	Mass Balance of a Welding Joint	102
4.7	Melt Flow.	103
4.7.1	Melt Flow Passing Around the Keyhole	104
4.7.2	Numerical 2D-Simulation of the Melt Flow Around a Prescribed Keyhole Shape	105
4.7.3	Marangoni Flow Driven by Surface Tension Gradients.	107
4.7.4	Flow Redirection, Inner Eddies, Spatter and Stagnation Points	108
4.7.5	Humping Caused by Accumulating Downstream Flow	109

4.7.6	Keyhole Front Melt Film Flow Downwards, Driven by Recoil Pressure.	109
4.8	Concluding Remarks.	110
	References.	111
5	Laser Keyhole Welding: The Vapour Phase	113
	John Dowden	
5.1	Notation	113
5.2	The Keyhole.	115
5.3	The Keyhole Wall	119
5.3.1	The Knudsen Layer.	119
5.3.2	Fresnel Absorption	123
5.4	The Role of Convection in the Transfer of Energy to the Keyhole Wall	124
5.5	Fluid Flow in the Keyhole	128
5.5.1	General Aspects.	128
5.5.2	Turbulence in the Weld Pool and the Keyhole	129
5.5.3	Stability of the Keyhole Wall	131
5.5.4	Stability of Waves of Acoustic Type.	131
5.5.5	Elongation of the Keyhole.	135
5.6	Further Aspects of Fluid Flow	136
5.6.1	Simplifying Assumptions for an Analytical Model	136
5.6.2	Lubrication Theory Model.	136
5.6.3	Boundary Conditions.	137
5.6.4	Solution Matched to the Liquid Region.	141
5.7	Electromagnetic Effects.	142
5.7.1	Self-induced Currents in the Vapour.	142
