

Contents

1 The State of Art	1
1.1 Introduction	1
1.2 Synthesis of Potential Fields and Airborne Gamma Spectrometry	2
1.3 Synthesis of Geological-Geophysical-Geochemical Aspects	4
1.4 Conclusions	5
References	6
2 Overview of the Geology of Cuba	9
2.1 Introduction	10
2.2 The Cuban Orogenic Belt	10
2.2.1 Proterozoic Basement and Jurassic Granites	11
2.2.2 Mesozoic Basement	12
2.2.3 Paleogene Folded and Faulted Belt	24
2.2.4 Eocene-Quaternary Cover	30
2.3 Conclusions	35
References	35
3 Tectonic-Structural Regionalization with Purposes of Hydrocarbon Exploration and Mapping of New Potential Oil-Gas Goals	39
3.1 Introduction	39
3.2 Materials and Methods	40
3.2.1 Materials	40
3.2.2 Methods and Techniques	40
3.3 Results	42
3.3.1 Region of Block 9	42
3.3.2 Region of Block 23	52
3.3.3 Region of Blocks 17–18	55

3.4	Conclusions	62
	References.	62
4	Geological-Structural Mapping of Weathered Igneous and Metamorphic Rock Units	65
4.1	Introduction	65
4.2	Materials and Methods	66
4.2.1	Materials	66
4.2.2	Methods and Techniques.	66
4.3	Results	68
4.3.1	Central Region	68
4.3.2	Camagüey-Las Tunas-Holguín Region	71
4.3.3	Habana-Matanzas Region	73
4.4	Conclusions	76
	References.	76

Oil and Gas Exploration in Cuba

Geological-Structural Cartography using Potential Fields
and Airborne Gamma Spectrometry

Pardo Echarte, M.E.; Cobiella Reguera, J.L.

2017, XIV, 76 p. 48 illus., 45 illus. in color., Softcover

ISBN: 978-3-319-56743-3
