

Contents

1	Introduction	1
1.1	Low-Budget Space Travel	1
1.2	A Topical Overview	6
2	Warming Up: Integers, Sequences, and Experimental Mathematics	13
2.1	From the Lebombo Bone to OEIS	13
2.2	Experimental Mathematics	14
2.3	Primes	15
2.3.1	Harmonic Numbers Revisited	17
2.4	Periodic Sequences: Visualization, Periods, Preperiods, Floyd's Cycle-Finding Algorithm	21
2.5	Mathematical Beauty at the Addition/Multiplication Interface	26
2.6	Some Classical Recurrent Sequences. Ducci Games	28
2.7	Deeper into the Randomness	35
2.8	The Greatest Prime Factor Function	39
2.9	Overview of Some Other Number-Theoretic Functions and Sequences	40
2.10	MATLAB Too!	45
2.11	An Experiment with Pairs of Primitive Roots Modulo Primes	51
2.12	Traffic Flow and Quadratic Residues	55
3	Greatest Prime Factor Sequences	67
3.1	The Prehistory: GPF Sequences, First Contact	67
3.2	GPF-Fibonacci: Toward a Generalized GPF Conjecture	74
3.3	Vector-Valued MGPF Sequences	84
3.4	The Ubiquitous 2, 3, 5, 7 and an Interesting Magma Structure	92
3.5	Solvability: A Surprising Property of a Class of Infinite-Order GPF Recurrences	103
3.5.1	The Case of an Arbitrary Seed	109

3.6	GPF Ducci Games: A Combinatorial Unleashing of 2, 3, 5, 7	114
3.6.1	GPF Ducci Period Fishing with a Monte Carlo Rod	126
3.6.2	An Infinite-Dimensional Analogue	126
3.7	All Primes in Terms of a Single Prime and Related Puzzles	130
3.7.1	Prologue: An Exercise with Commuting Pairs.	130
3.7.2	A Cyclicity Conjecture	131
3.7.3	Exploring the Possible Cyclicity of a General Magma ($\Pi, f_{a,b}$): Necessary Conditions and Computational Evidence	135
4	Conway's Subprime Function and Related Structures with a Touch of Fibonacci Flavor	151
4.1	An Euler–Fibonacci Sequence	151
4.1.1	A Kepler Moment?	155
4.1.2	The Euler–Fibonacci Sequence Modulo 4	157
4.2	Conway's Subprime Fibonacci Sequences	158
4.2.1	A Monte Carlo Approach to Subprime Fib Period Search	160
4.2.2	General Second-Order Subprime Sequences	161
4.3	Subprime Tribonacci Sequences and Beyond	162
4.3.1	What Lies Beyond?	164
4.3.2	Are All of Them Ultimately Periodic?	164
4.4	Conway Subprime Ducci Games	165
4.5	Conway Subprime Magmas, a Remarkable Cyclicity Result, and an Unexpected Sighting of the Golden Ratio.	170
4.5.1	On a Class of Nontrivial Finite Submagmas of (\mathbb{N}, \oplus)	177
4.5.2	Substructures with Two Elements	178
4.5.3	Substructures with Three Elements	179
4.5.4	Concluding the Proof of Theorem 4.5.	180
4.5.5	On a Class of Nontrivial Infinite Submagmas of (\mathbb{N}, \oplus)	181
5	Going All Experimental: More Games and Applications	185
5.1	The Greatest Prime Factor and “Nonassociative” Quaternary Cellular Automata.	186
5.1.1	Two-Dimensional Nonassociative Quaternary Cellular Automata.	190
5.2	Complex Evolution for a Class of Integer-Valued Nonassociative Automata	191
5.2.1	Taking the Boundary into Account	194
5.2.2	MATLAB for 2D GPF Automata	196
5.2.3	2D Conway Subprime Automata.	199

5.3	Walks from Greatest Prime Factor Sequences and a Mysterious Chebyshev-Like Bias	203
5.3.1	Self-correlations.	214
5.3.2	A Quasirandomness Test for the Limit Cycles of GPF Sequences	217
5.3.3	The Curious Negative-Leaning Trend	219
5.3.4	Limitations and Opportunities	225
5.3.5	2D and 3D Walks	225
5.3.6	WYSIWYG (Well, Almost...)	232
5.4	Linear Complexity of Bitstreams Derived from GPF Sequences	234
Appendix A: Review of Frequently Used Functions, Hands-On Visualization		249
Appendix B: Review of Floyd’s Algorithm and Floyd–Monte Carlo Data Acquiring for Periods		255
Appendix C: Julia Programs Used in Exploring GPF and Conway Magmas		259
Appendix D: What’s Next? Epilogue and Some Reflections		269
References		273
