

Contents

1	Two-Dimensional Geophysical Fluid Dynamics	1
1.1	Equilibrium Distributions for Hydrodynamic Flows	1
1.2	Plane Motion Under the Action of a Periodic Force	8
2	Parametrically Excited Dynamic Systems	15
2.1	Lognormal Random Process	16
2.2	Uncorrected Error of the Past Unavoidably Results in Errors of the Present and Future	17
2.3	Oscillator with Randomly Varying Frequency (Stochastic Parametric Resonance)	19
3	Examples of Stochastic Dynamic Systems	21
3.1	Particles Under the Random Velocity Field	21
3.1.1	The Simplest Numerical Example of Particle Dynamics	22
3.2	Plane Waves in Layered Media	26
3.3	Partial Differential Equations	36
3.4	Model of a Stochastic Velocity Field Allowing Analytical Solutions to Transport Problems	41
3.4.1	Model of Passive Tracer Diffusion	42
3.4.2	Turbulent Dynamo Model	42
4	Statistical Characteristics of a Random Velocity Field $u(r, t)$	45
5	Lognormal Processes, Intermittency, and Dynamic Localization	49
5.1	Typical Realization Curve of a Random Process	51
5.2	Dynamic Localization	52
6	Stochastic Parametric Resonance	55

7	Wave Localization in Randomly Layered Media	59
7.1	Statistics of Scattered Field at Layer Boundaries	60
7.1.1	Reflection and Transmission Coefficients.	60
7.1.2	Source Inside the Layer of a Medium	67
7.1.3	Statistical Localization.	68
7.2	Statistical Theory of Radiative Transfer	69
7.2.1	Normal Wave Incidence on the Layer of Random Media	69
7.2.2	Nondissipative Medium (Stochastic Wave Parametric Resonance and Dynamic Wave Localization)	72
7.2.3	Dissipative Medium.	80
7.2.4	Plane Wave Source Located in Random Medium	84
7.3	Numerical Simulation	87
7.3.1	Wave Incident on the Medium Layer	89
7.3.2	Plane Wave Source in the Medium Layer	90
8	Lognormal Fields, Statistical Topography, and Clustering	95
8.1	Lognormal Random Fields	95
8.2	Statistical Topography of Random Fields	97
8.2.1	Conditions of Cluster Structure Formation	99
8.2.2	Statistical Topography of Lognormal Random Fields	104
9	Stochastic Transport Phenomena in a Random Velocity Field	109
9.1	Clustering of the Density Field in a Random Velocity Field	109
9.2	Probabilistic Description of a Magnetic Field and Its Energy in a Random Velocity Field	116
9.2.1	Probabilistic Description of a Magnetic Field	116
9.2.2	Probabilistic Description of Magnetic Field Energy.	118
9.2.3	The Critical Case of $\alpha = 0$ ($D^P = D^s$).	120
10	Parametrically Excited Dynamic Systems with Gaussian Pumping	123
10.1	Statistical Analysis of Simple Turbulent Dynamo Problem with Gaussian Pumping	123
10.2	Anomalous Sea Surface Structures	126
10.2.1	Problem Statement.	127
10.2.2	Equation in Probability Density.	132
10.2.3	Statistical Analysis of the Problem	137
10.2.4	Statistical Topography of the Sea Surface Elevation Field	140
	Conclusion	143

**Appendix: Elements of Mathematical Tools for Describing
Coherent Phenomena 145**

Bibliography 187

Fundamentals of Stochastic Nature Sciences

Klyatskin, V.I.

2017, XII, 190 p. 62 illus., 11 illus. in color., Hardcover
