

Contents

An Algebraic Method to Compute the Mobility of Closed-Loop Overconstrained Mechanisms	1
Anissa Ali, Mireille Moinet and Philippe Serre	
Simplicial Topological Coding and Homology of Spin Networks.	11
Vesna Berek	
Trial Set and Gröbner Bases for Binary Codes	21
Mijail Borges-Quintana, Miguel A. Borges-Trenard and Edgar Martínez-Moro	
Automated Study of Envelopes of One-Parameter Families of Surfaces	29
Thierry Dana-Picard and Nurit Zehavi	
Complex Roots of Quaternion Polynomials.	45
Petroula Dospra and Dimitrios Poulakis	
Mathematical Renormalization in Quantum Electrodynamics via Noncommutative Generating Series	59
G.H.E. Duchamp, V. Hoang Ngoc Minh, Ngo Quoc Hoan, K. Penson and P. Simonnet	
The Root Lattice A_2 in the Construction of Substitution Tilings and Singular Hypersurfaces.	101
Juan García Escudero	
Finding Eigenvalues of Self-maps with the Kronecker Canonical Form	119
Marc Ethier, Grzegorz Jabłoński and Marian Mrozek	
Algorithm for Predicting Mathematical Formulae from Linear Strings for Mathematical Inputs.	137
Tetsuo Fukui	

Algebraic Modelling of Covering Arrays.	149
Bernhard Garn and Dimitris E. Simos	
Applications of Signatures Curves to Characterize Melanomas and Moles	171
Anna Grim and Chehrzad Shakiban	
Contemporary Interpretation of a Historical Locus Problem with the Use of Computer Algebra	191
Roman Hašek, Zoltán Kovács and Jan Zahradník	
Computing the Chern–Schwartz–MacPherson Class of Complete Simplicial Toric Varieties	207
Martin Helmer	
The Generalized Rabinowitsch Trick	219
Deepak Kapur, Yao Sun, Dingkang Wang and Jie Zhou	
A Web-Based Quantum Computer Simulator with Symbolic Extensions	231
O.G. Karamitrou, C. Tsimpouris, P. Mavridi and K.N. Sgarbas	
Dixon-EDF: The Premier Method for Solution of Parametric Polynomial Systems	237
Robert H. Lewis	
Visualization of Orthonormal Triads in Cylindrical and Spherical Coordinates	257
J. López-García, J.J. Jiménez Zamudio and M.E. Canut Díaz Velarde	
Geometric and Computational Approach to Classical and Quantum Secret Sharing	267
Ryutaroh Matsumoto and Diego Ruano	
Computing the Dixon Resultant with the Maple Package DR	273
Manfred Minimair	
Collaborative Computer Algebra	289
Manfred Minimair	
States and Channels in Quantum Mechanics Without Complex Numbers	305
J.A. Mischczak	
Double Hough Transform for Estimating the Position of the Mandibular Canal in Dental Radiographs	317
Darian Onchis-Moaca, Simone Zappalá, Smaranda Laura Goția and Pedro Real	

Simple and Nearly Optimal Polynomial Root-Finding by Means of Root Radii Approximation	329
Victor Y. Pan	
A Fast Schur–Euclid-Type Algorithm for Quasiseparable Polynomials	341
Sirani M. Perera and Vadim Olshevsky	
The Use of CAS Piranha for the Construction of Motion Equations of the Planetary System Problem	385
A.S. Perminov and E.D. Kuznetsov	
Code-Based Cryptosystems Using Generalized Concatenated Codes	397
Sven Puchinger, Sven Muelich, Karim Ishak and Martin Bossert	
Univariate Real Root Isolation over a Single Logarithmic Extension of Real Algebraic Numbers	425
Adam Strzeboński and Elias P. Tsigaridas	
On the Complexity of Multivariate Polynomial Division	447
Joris van der Hoeven	
Preserving Syntactic Correctness While Editing Mathematical Formulas	459
Joris van der Hoeven, Grégoire Lecerf and Denis Raux	
About Balanced Application of CAS in Undergraduate Mathematics	473
Elena Varbanova	
Some Remarks on Taylor’s Polynomials Visualization Using Mathematica in Context of Function Approximation.	487
Włodzimierz Wojas and Jan Krupa	
Zooming Algorithms for Accurate Plotting of Functions of Two Real Variables	499
David G. Zeitoun and Thierry Dana-Picard	

Applications of Computer Algebra

Kalamata, Greece, July 20–23 2015

Kotsireas, I.S.; Martínez-Moro, E. (Eds.)

2017, XIV, 515 p. 126 illus., 73 illus. in color., Hardcover

ISBN: 978-3-319-56930-7
