

Contents

1	Preliminaries	1
1.1	Complex Numbers and Polynomials	1
1.1.1	Complex Numbers: Basic Operations and Formulas	1
1.1.2	Algebraic Operations with Polynomials	8
1.1.3	Roots of Polynomials and Their Properties	11
1.1.4	Viète's Formulas	14
1.1.5	Polynomials with Real Coefficients	15
1.2	Systems of Linear Equations, Matrices, Determinants	17
1.2.1	Permutations	17
1.2.2	Determinants and Their Basic Properties	19
1.2.3	Cramer's Rule	28
1.2.4	Matrices: Basic Operations and Transformations	32
1.2.5	Gaussian Elimination	43
1.2.6	The Determinant of the Product of Matrices	49
1.2.7	Basic Matrix Types	49
1.2.8	Block Matrices and Basic Operations with Block Matrices	51
2	Vector Spaces	55
2.1	The Vector Spaces \mathbb{R}^n and \mathbb{C}^n	55
2.1.1	The Vector Space \mathbb{R}^n	55
2.1.2	The Vector Space \mathbb{C}^n	57
2.2	Abstract Vector Spaces	57
2.2.1	Definitions and Examples	57
2.2.2	Linearly Dependent Vectors	59
2.2.3	Linearly Independent Sets of Vectors	62
2.2.4	The Rank of a Set of Vectors	63
2.3	Finite-Dimensional Vector Spaces. Bases	64
2.3.1	Bases in the Space \mathbb{C}^n	64
2.3.2	Finite-Dimensional Spaces. Examples	65
2.3.3	Change of Basis	66

3	Inner Product Spaces	69
3.1	Inner Products on \mathbb{R}^n and \mathbb{C}^n	69
3.2	Abstract Inner Product Spaces	71
3.2.1	Definitions and Examples	71
3.2.2	The Cauchy–Schwarz Inequality	72
3.2.3	The Gram Matrix	74
3.2.4	Orthogonal Sets of Vectors. Gram–Schmidt Orthogonalization Process	75
3.2.5	The Expansion of a Vector with Respect to a Basis in an Inner Product Space	79
3.2.6	The Calculation of an Inner Product	80
3.2.7	Reciprocal Basis Vectors	80
3.2.8	Examples of Orthogonal Bases	81
3.3	Subspaces	84
3.3.1	The Sum and Intersection of Subspaces	84
3.3.2	The Dimension of the Sum of Subspaces	86
3.3.3	The Orthogonal Projection of a Vector onto a Subspace	87
3.3.4	The Orthogonal Decomposition of an Inner Product Space	91
4	Linear Operators	93
4.1	Linear Operators and Their Basic Properties	93
4.1.1	Basic Definitions. Operations with Operators	93
4.1.2	The Inverse Operator	95
4.1.3	The Coordinate Representation Operator	96
4.1.4	Isomorphism of Finite-Dimensional Linear Spaces	97
4.1.5	The Matrix of a Linear Operator	98
4.1.6	The Matrix of the Inverse Operator	101
4.1.7	Linear Spaces of Linear Operators	102
4.1.8	The Image and the Kernel of a Linear Operator	102
4.1.9	The Rank of a Matrix	103
4.1.10	Calculating the Rank of a Matrix Using Determinants	106
4.1.11	The General Solution of a Linear Equation	107
4.1.12	Systems of Linear Algebraic Equations. Solvability Conditions	108
4.1.13	The General Solution of a System of Linear Algebraic Equations	110
4.2	Eigenvalues and Eigenvectors of a Linear Operator	113
4.2.1	Invariant Subspaces	113
4.2.2	Basic Properties of Eigenvalues and Eigenvectors	115
4.2.3	Diagonalizable Operators	121
4.2.4	Invariants of an Operator	122

4.2.5	Invariant Subspaces of an Operator in a Real Space...	125
4.2.6	Nilpotent Operators.....	126
4.2.7	The Triangular Form of the Matrix of an Operator...	127
4.2.8	The Real Schur Form.....	131
4.3	Operators on Unitary Spaces.....	132
4.3.1	Linear Functionals.....	132
4.3.2	The Adjoint Operator.....	133
4.3.3	Linear Equations in Unitary Spaces.....	135
4.3.4	Pseudosolutions. The Tikhonov Regularization Method.....	137
4.3.5	Self-adjoint and Skew-Hermitian Operators.....	139
4.3.6	Positive Definite and Positive Semidefinite Operators.....	141
4.3.7	Unitary Operators.....	141
4.3.8	Normal Operators.....	142
4.3.9	The Root of a Positive Semidefinite Self-adjoint Operator.....	145
4.3.10	Congruent Hermitian Operators.....	146
4.3.11	Variational Properties of Eigenvalues of Self-adjoint Operators.....	148
4.3.12	Examples of Application of Variational Properties of Eigenvalues.....	150
4.4	Operators on Euclidean Spaces.....	155
4.4.1	Overview.....	155
4.4.2	The Structure of Normal Operators.....	156
4.4.3	The Structure of Orthogonal Operators.....	158
4.4.4	Givens Rotations and Householder Transformations...	160
5	Canonical Forms and Factorizations.....	163
5.1	The Singular Value Decomposition.....	163
5.1.1	Singular Values and Singular Vectors of an Operator.....	163
5.1.2	The Polar Decomposition.....	167
5.1.3	Basic Properties of the Pseudoinverse Operator.....	169
5.1.4	Elements of the Theory of Majorization.....	170
5.1.5	Some Estimates of Eigenvalues and Singular Values.....	174
5.2	The Jordan Canonical Form.....	179
5.2.1	Existence and Uniqueness of the Jordan Canonical Form.....	179
5.2.2	Root and Cyclic Subspaces.....	185
5.2.3	The Real Jordan Canonical Form.....	186
5.2.4	Power Series of Matrices.....	188

5.3	Matrix Pencils	191
5.3.1	Definitions and Basic Properties	191
5.3.2	The Quasidiagonal Form of a Regular Pencil	195
5.3.3	Weierstrass Canonical Form	196
5.3.4	Hermitian and Definite Pencils	197
5.3.5	Singular Pencils. The Theorem on Reduction	198
5.3.6	Kronecker Canonical Form	203
5.3.7	Applications to Systems of Linear Differential Equations	204
6	Vector and Matrix Norms	209
6.1	Basic Inequalities	209
6.2	Norms on the Space \mathbb{C}^n	211
6.3	The Hahn–Banach Theorem. Dual Norms	214
6.4	Norms on the Space of Matrices	218
6.5	The Gap Between Two Subspaces of \mathbb{C}^n	226
7	Elements of Perturbation Theory	231
7.1	Perturbations in the Symmetric Eigenvalue Problem	231
7.2	Perturbations of Singular Values and Singular Vectors	236
7.3	Perturbations of Characteristic Values of Arbitrary Matrices	237
7.4	Perturbations and the Invertibility of a Matrix	241
7.5	The Stability of Systems of Linear Equations	243
7.6	Perturbations in the Linear Least Squares Problem	246
8	Solving Systems of Linear Equations	249
8.1	Algorithms for Gaussian Elimination	249
8.1.1	LU Factorization with Pivoting	249
8.1.2	The Need for Pivoting	252
8.1.3	A Numerical Example	255
8.2	Error Analysis	258
8.2.1	Rounding Analysis in Polynomial Evaluation	259
8.2.2	Error Analysis in Gaussian Elimination	265
8.2.3	Estimating the Condition Number	268
8.2.4	Estimating the Relative Condition Number	271
8.2.5	Practical Error Bounds	271
8.3	Algorithms for Improving the Accuracy of the Solution	272
8.4	Special Linear Systems	275
8.4.1	Real Symmetric Positive Definite Matrices	275
8.4.2	Symmetric Indefinite Matrices	279
8.4.3	Band Matrices	279
8.4.4	A Numerical Example	284
	Questions	284

9	Numerical Solution of Linear Least Squares Problems	291
9.1	Linear Least Squares Problems	292
9.2	Nonlinear Least Squares Problems	297
9.3	Method of Normal Equations	303
9.4	QR Decomposition	305
9.5	Orthogonalization Methods	307
9.5.1	Householder Transformations	307
9.5.2	Givens Rotation	319
9.5.3	Gram–Schmidt Orthogonalization	323
9.6	Singular Value Decomposition	326
9.6.1	Rank-Deficient Least Squares Problems	333
9.6.2	How to Solve Rank-Deficient Least Squares Problems	336
9.7	Software for the Solution of Linear Least Squares Problems	338
	Questions	339
10	Algorithms for the Nonsymmetric Eigenvalue Problem	345
10.1	Power Method	345
10.2	Inverse Iteration	348
10.3	Orthogonal Iteration	351
10.4	QR Iteration	355
10.5	QR Iteration with Shifts	356
10.6	Hessenberg Reduction	358
10.7	Tridiagonal and Bidiagonal Reduction	362
10.7.1	Tridiagonal Reduction Using Householder Transformation	365
10.7.2	Tridiagonal Reduction Using Givens Rotation	367
10.8	QR Iteration with Implicit Shifts	370
	Questions	373
11	Algorithms for Solution of Symmetric Eigenvalue Problems	375
11.1	Tridiagonal QR Iteration	376
11.2	Rayleigh Quotient Iteration	377
11.3	Divide and Conquer	380
11.4	Bisection and Inverse Iteration	385
11.5	Jacobi’s Method	388
11.6	Algorithms for the Singular Value Decomposition	393
11.7	Different Versions of QR Iteration for the Bidiagonal SVD	396
11.8	Jacobi’s Method for the SVD	400
	Questions	403
12	Introduction to Iterative Methods for the Solution of Linear Systems	407
12.1	Basic Iterative Methods	407
12.2	Jacobi Method	409
12.3	Gauss–Seidel Method	411

12.4	Successive Overrelaxation $SOR(\omega)$ Method	413
12.5	Symmetric Successive Overrelaxation $SSOR(\omega)$ Method	414
12.6	Convergence of Main Iterative Methods	418
12.7	Krylov Subspace Methods	424
12.8	Conjugate Gradient Method	429
12.9	Preconditioning for Linear Systems	433
	Questions	436
	References	441
	Index	445

Numerical Linear Algebra: Theory and Applications

Beilina, L.; Karchevskii, E.; Karchevskii, M.

2017, XIV, 450 p. 15 illus., 14 illus. in color. With online files/update., Hardcover

ISBN: 978-3-319-57302-1
