

Contents

1	Background and Motivation	1
1.1	What Is a Principle-Based Theory?	3
1.2	First Cornerstone: Soloviev's Proof	7
1.3	Comments on the Reliability Function	9
1.4	Questioning the Bathtub Curve	9
1.5	Scopes, Methods and Overview of the Present Work	13
	References	14
 Part I Properties of Functioning Systems		
2	Old and Novel Tools for the Calculus of the Hazard Rate	19
2.1	The Reliability of What?	19
2.2	Entropic Systems	23
2.3	Boltzmann-like Entropy	26
2.4	Physical Meaning of the Boltzmann-like Entropy	29
	References	33
3	How Systems Break Down	35
3.1	Interferences Overlap	35
3.2	Factors Leading to Work Interruption	37
3.3	Systematic Factors of Failure	37
3.4	Simplified Models and Realistic Models	40
3.5	Enduring Obtrusion and Decadence	41
3.6	Comments on the Principle of Progressive Deterioration	42
	References	46
4	Constant Decline	49
4.1	Two Introductory Remarks	49
4.2	Comments on the Linearity Assumption	51

4.3	Hazard Rate Caused by Constant Decline.	53
4.4	Comments on Theorem 4.1 and Lemma 4.1.	55
	References.	56
5	Random Factors	59
5.1	Random Factors of Failure	59
5.2	Comments on the Principle of Random Accidents	60
5.3	Behavior of Accidents	60
5.4	Hazard Rate Caused by Random Accidents	62
5.5	Comments on Theorem 5.2 and Lemma 5.1.	63
5.6	Shock Theories.	65
	References.	67
6	Accelerated Decline	69
6.1	Compound Degradation	70
6.2	Hazard Rate Caused by a Linear Cascade Effect	71
6.3	Comments on Theorem 6.3 and Lemma 6.1.	73
6.4	Hazard Rate Caused by Complex Cascade Effect.	77
6.5	Comments on Theorem 6.5 and Lemma 6.2.	80
6.6	Additional Remarks on the Constant and Accelerated Decline of Systems.	85
	References.	87
7	When the Premises Are Untrue	89
7.1	The Entropy Does not Exist	89
7.2	The Linearity Assumption Is False.	90
7.3	The Cascade Effect Is False	95
7.4	Binomial Assumption Is False	96
7.5	The Linearity Assumption Is Alternatively False and True.	98
7.6	Intent on Completeness.	99
	References.	99
8	Ideal Hazard Rate	101
8.1	Genericness.	101
8.2	Deductive Logic and the Tripartite Curve.	102
8.3	Comments on the Bathtub Curve	103
	References.	106

Part II Properties of Repairable Systems

9	Properties of Repairable Systems	109
9.1	The Functioning State and the Recovery State	109
9.2	The Repairability Function	110
9.3	Property of the Extreme States	111
9.4	Comments on the Extreme States of the System.	112
9.5	Property of the Repair Outcomes	114

9.6	Comments on the Repair Outcomes	117
9.7	Property of the Repair Process	118
9.8	Comments on the Repair Process	118
	References.	120
 Part III Overall Conclusion		
10	Conclusive Remarks and Comments	125
10.1	What We Meant to Do	125
10.2	What Principles	126
10.3	What We Have Found in Part 1	126
10.4	What We Have Found in Part 2	127
10.5	Overall Discussion of the Results	128
	References.	132
	Appendix A: History of Reliability in Literature	133
	Appendix B: Two Sided Estimates of Rate Convergence in Limit	
	Theorem for Minimums of Random Variables.	135
	Appendix C: Mortality Plateau	143
	Index	151

Reliability is a New Science

Gnedenko Was Right

Rocchi, P.

2017, XV, 152 p. 50 illus., Hardcover

ISBN: 978-3-319-57471-4
