# Contents

<b>Preface</b> .....	V
<b>1 Prologue</b> .....	1
1.1 Why random and Brownian motion (white noise)? .....	1
1.2 Modeling with SPDEs .....	4
1.3 Specific topics of this book .....	7
<b>2 Brownian motion and stochastic calculus</b> .....	11
2.1 Gaussian processes and their representations .....	11
2.2 Brownian motion and white noise .....	17
2.2.1 Some properties of Brownian motion .....	18
2.2.2 Approximation of Brownian motion .....	21
2.3 Brownian motion and stochastic calculus .....	25
2.4 Stochastic chain rule: Ito formula .....	29
2.5 Integration methods in random space .....	31
2.5.1 Monte Carlo method and its variants .....	31
2.5.2 Quasi-Monte Carlo methods .....	34
2.5.3 Wiener chaos expansion method .....	35
2.5.4 Stochastic collocation method .....	37
2.5.5 Application to SODEs .....	40
2.6 Bibliographic notes .....	46
2.7 Suggested practice .....	50
<b>3 Numerical methods for stochastic differential equations</b> ...	53
3.1 Basic aspects of SODEs .....	53
3.1.1 Existence and uniqueness of strong solutions .....	54
3.1.2 Solution methods .....	56
3.2 Numerical methods for SODEs .....	60
3.2.1 Derivation of numerical methods based on numerical integration .....	60

3.2.2	Strong convergence . . . . .	62
3.2.3	Weak convergence . . . . .	64
3.2.4	Linear stability . . . . .	66
3.2.5	Summary of numerical SODEs . . . . .	69
3.3	Basic aspects of SPDEs . . . . .	69
3.3.1	Functional spaces . . . . .	72
3.3.2	Solutions in different senses . . . . .	73
3.3.3	Solutions to SPDEs in explicit form . . . . .	76
3.3.4	Linear stochastic advection-diffusion-reaction equations . . . . .	77
3.3.5	Existence and uniqueness . . . . .	77
3.3.6	Conversion between Ito and Stratonovich formulation . . . . .	78
3.4	Numerical methods for SPDEs . . . . .	80
3.4.1	Direct semi-discretization methods for parabolic SPDEs . . . . .	82
3.4.2	Wong-Zakai approximation for parabolic SPDEs . . . . .	85
3.4.3	Preprocessing methods for parabolic SPDEs . . . . .	86
3.4.4	What could go wrong? Examples of stochastic Burgers and Navier-Stokes equations . . . . .	88
3.4.5	Stability and convergence of existing numerical methods . . . . .	90
3.4.6	Summary of numerical SPDEs . . . . .	93
3.5	Summary and bibliographic notes . . . . .	94
3.6	Suggested practice . . . . .	96

---

## Part I Numerical Stochastic Ordinary Differential Equations

---

4	<b>Numerical schemes for SDEs with time delay using the Wong-Zakai approximation . . . . .</b>	<b>103</b>
4.1	Wong-Zakai approximation for SODEs . . . . .	104
4.1.1	Wong-Zakai approximation for SDDEs . . . . .	105
4.2	Derivation of numerical schemes . . . . .	106
4.2.1	A predictor-corrector scheme . . . . .	107
4.2.2	The midpoint scheme . . . . .	111
4.2.3	A Milstein-like scheme . . . . .	113
4.3	Linear stability of some schemes . . . . .	119
4.4	Numerical results . . . . .	123
4.5	Summary and bibliographic notes . . . . .	129
4.6	Suggested practice . . . . .	132

<b>5</b>	<b>Balanced numerical schemes for SDEs with non-Lipschitz coefficients</b>	135
5.1	A motivating example	135
5.2	Fundamental theorem	137
5.2.1	On application of Theorem 5.2.3	140
5.2.2	Proof of the fundamental theorem	141
5.3	A balanced Euler scheme	145
5.4	Numerical examples	153
5.4.1	Some numerical schemes	153
5.4.2	Numerical results	155
5.5	Summary and bibliographic notes	158
5.6	Suggested practice	159

---

## Part II Temporal White Noise

---

<b>6</b>	<b>Wiener chaos methods for linear stochastic advection-diffusion-reaction equations</b>	165
6.1	Description of methods	165
6.1.1	Multistage WCE method	166
6.1.2	Algorithm for computing moments	170
6.2	Examples in one dimension	173
6.2.1	Numerical results for one-dimensional advection-diffusion-reaction equations	175
6.3	Comparison of the WCE algorithm and Monte Carlo type algorithms	177
6.4	A two-dimensional passive scalar equation	181
6.4.1	A Monte Carlo method based on the method of characteristics	184
6.4.2	Comparison between recursive WCE and Monte Carlo methods	185
6.5	Summary and bibliographic notes	186
6.6	Suggested practice	188
<b>7</b>	<b>Stochastic collocation methods for differential equations with white noise</b>	191
7.1	Introduction	191
7.2	Isotropic sparse grid for weak integration of SDE	193
7.2.1	Probabilistic interpretation of SCM	193
7.2.2	Illustrative examples	194
7.3	Recursive collocation algorithm for linear SPDEs	202
7.4	Numerical results	206
7.5	Summary and bibliographic notes	212
7.6	Suggested practice	214

<b>8</b>	<b>Comparison between Wiener chaos methods and stochastic collocation methods</b>	215
8.1	Introduction	215
8.2	Review of Wiener chaos and stochastic collocation	216
8.2.1	Wiener chaos expansion (WCE)	216
8.2.2	Stochastic collocation method (SCM)	217
8.3	Error estimates	220
8.3.1	Error estimates for WCE	221
8.3.2	Error estimate for SCM	227
8.4	Numerical results	236
8.5	Summary and bibliographic notes	244
8.6	Suggested practice	245
<b>9</b>	<b>Application of collocation method to stochastic conservation laws</b>	247
9.1	Introduction	247
9.2	Theoretical background	249
9.2.1	Stochastic Euler equations	250
9.3	Verification of the Stratonovich- and Ito-Euler equations	252
9.3.1	A splitting method for stochastic Euler equations	252
9.3.2	Stratonovich-Euler equations versus first-order perturbation analysis	253
9.3.3	Stratonovich-Euler equations versus Ito-Euler equations	254
9.4	Applying the stochastic collocation method	255
9.5	Summary and bibliographic notes	258
9.6	Suggested practice	261

---

## Part III Spatial White Noise

---

<b>10</b>	<b>Semilinear elliptic equations with additive noise</b>	267
10.1	Introduction	267
10.2	Assumptions and schemes	269
10.3	Error estimates for strong and weak convergence order	271
10.3.1	Examples of other PDEs	272
10.3.2	Proofs of the strong convergence order	275
10.3.3	Weak convergence order	278
10.4	Error estimates for finite element approximation	282
10.5	Numerical results	288
10.6	Summary and bibliographic notes	289
10.7	Suggested practice	291

<b>11</b>	<b>Multiplicative white noise: The Wick-Malliavin approximation</b>	293
11.1	Introduction	293
11.2	Approximation using the Wick-Malliavin expansion	295
11.3	Lognormal coefficient	297
11.3.1	One-dimensional example	299
11.4	White noise as coefficient	300
11.4.1	Error Estimates	303
11.4.2	Numerical results	310
11.5	Application of Wick-Malliavin approximation to nonlinear SPDEs	311
11.6	Wick-Malliavin approximation: extensions for non-Gaussian white noise	313
11.6.1	Numerical results	318
11.6.2	Malliavin derivatives for Poisson noises	321
11.7	Summary and bibliographic notes	325
11.8	Suggested practice	329
<b>12</b>	<b>Epilogue</b>	331
12.1	A review of this work	331
12.2	Some open problems	334

---

## Appendices

---

<b>A</b>	<b>Basics of probability</b>	339
A.1	Probability space	339
A.1.1	Random variable	339
A.2	Conditional expectation	340
A.2.1	Properties of conditional expectation	341
A.2.2	Filtration and Martingales	342
A.3	Continuous time stochastic process	343
<b>B</b>	<b>Semi-analytical methods for SPDEs</b>	345
<b>C</b>	<b>Gauss quadrature</b>	347
C.1	Gauss quadrature	347
C.2	Gauss-Hermite quadrature	350
<b>D</b>	<b>Some useful inequalities and lemmas</b>	353
<b>E</b>	<b>Computation of convergence rate</b>	357
	<b>References</b>	359
	<b>Index</b>	391

Numerical Methods for Stochastic Partial Differential  
Equations with White Noise

Zhang, Z.; Karniadakis, G.E.

2017, XV, 394 p. 36 illus., 34 illus. in color. With online  
files/update., Hardcover

ISBN: 978-3-319-57510-0
