

Contents

1	New Perspectives on the Econometrics of Carbon Markets	1
1.1	Significance of Pricing and Forecasting Carbon Market	1
1.2	Review of Pricing and Forecasting Carbon Market	2
1.2.1	Carbon Price Drivers	2
1.2.2	Carbon Price Singlescale Forecasting	4
1.2.3	Carbon Price Multiscale Forecasting	5
1.3	The Organization of This Book	6
	References	9
2	European Carbon Futures Prices Drivers During 2006–2012	13
2.1	Introduction	13
2.2	Carbon Price Drivers	15
2.3	Data	17
2.3.1	Carbon Price	17
2.3.2	Energy Prices	17
2.3.3	Temperature Conditions	17
2.3.4	Economic Activities	18
2.3.5	Institutional Decisions	18
2.4	Cointegration Test and Ridge Regression Results	19
2.4.1	Cointegration Test	19
2.4.2	Ridge Regression Estimation	21
2.4.3	Granger Causality Test	24
2.5	Equilibrium Carbon Price	26
2.5.1	Equilibrium Carbon Price Equation	26
2.5.2	Comparison of Observed Carbon Price and Equilibrium Carbon Price	28
2.6	Conclusion	30
	References	30

3	Examining the Structural Changes of European Carbon Futures Price 2005–2012.	33
3.1	Introduction	33
3.2	Methodology	34
3.2.1	Iterative Cumulative Sums of Squares (ICSS).	34
3.2.2	Event Study	35
3.2.3	The ICSS-ES Model	37
3.3	Empirical Analysis	37
3.3.1	Data	37
3.3.2	Structural Breakpoint Test Using the ICSS Method	38
3.3.3	Structural Changes Analysis Using the ES Model.	39
3.4	Conclusion	44
	References.	44
4	A Multiscale Analysis for Carbon Price with Ensemble Empirical Mode Decomposition	47
4.1	Introduction	47
4.2	Methodology	50
4.2.1	Empirical Mode Decomposition	50
4.2.2	Ensemble Empirical Mode Decomposition	52
4.2.3	Fine-to-Coarse Reconstruction.	53
4.3	Decomposition	54
4.3.1	Data	54
4.3.2	IMFs	55
4.3.3	IMF Statistics	56
4.4	Composition	58
4.4.1	Trend	60
4.4.2	Effects of Significant Events	61
4.4.3	Normal Market Disequilibrium	63
4.5	Conclusion	64
	References.	64
5	Modeling the Dynamics of European Carbon Futures Prices: A Zipf Analysis	67
5.1	Introduction	67
5.2	Methodology	68
5.2.1	Zipf Analysis	68
5.2.2	Economic Significance of the Parameters ε and τ	70
5.3	Empirical Analyses.	70
5.3.1	Data	70
5.3.2	The Influences of Investment Timescale and Investor Psychology on the Expected Returns	71
5.3.3	Division of Speculators Based on Parameters	72

5.3.4	Absolute Frequencies of Carbon Price Fluctuations	77
5.3.5	Relative Frequencies of Carbon Price Fluctuations	77
5.4	Results: Analysis and Discussion	81
5.5	Concluding Remarks	83
	References.	84
6	Carbon Price Forecasting with a Hybrid ARIMA and Least Squares Support Vector Machines Methodology	87
6.1	Introduction	87
6.2	Methodology	89
6.2.1	ARIMA Model	89
6.2.2	Least Squares Support Vector Machines for Regression . .	89
6.2.3	The Hybrid Models.	91
6.3	The Optimal LSSVM Model by Particle Swarm Optimization . . .	92
6.4	Forecasting of Carbon Prices	95
6.4.1	Data	95
6.4.2	Forecasting Evaluation Criteria	96
6.4.3	Parameters Determination of Three Models.	99
6.4.4	Statistical Performance	101
6.4.5	Trading Performance.	104
6.5	Conclusions	105
	References.	106
7	Carbon Price Forecasting Using a Parameters Simultaneous Optimized Least Squares Support Vector Machine with Uniform Design.	109
7.1	Introduction	109
7.2	Methodology	111
7.2.1	Parameter Selection of a LSSVM Predictor.	111
7.2.2	Uniform Design for Parameter Selection of a LSSVM Predictor (UD-LSSVM).	113
7.3	Carbon Forecasting Results and Analyses.	114
7.3.1	Data	114
7.3.2	Evaluation Criteria	115
7.3.3	Establishment of the UD-LSSVM Model	116
7.3.4	Comparison with PSO.	122
7.4	Conclusion	130
	References.	131
8	Forecasting Carbon Price with Empirical Mode Decomposition and Least Squares Support Vector Regression	133
8.1	Introduction	133
8.2	Methodology	134
8.2.1	Hybridizing EMD and LSSVR for Carbon Price Prediction	134

8.3	Experimental Analysis	136
8.3.1	Carbon Prices	136
8.3.2	Evaluation Criteria	136
8.3.3	Predicted Results.	137
8.4	Conclusion	142
	References.	143
9	An Adaptive Multiscale Ensemble Learning Paradigm for Carbon Price Forecasting.	145
9.1	Introduction	145
9.2	Methodology	147
9.2.1	Kernel Function Prototype	147
9.2.2	The Adaptive Parameter Selection for LSSVM with the PSO Algorithm	148
9.2.3	The Proposed Adaptive Multiscale Ensemble Model for Carbon Price Forecasting	151
9.3	Empirical Analysis	154
9.3.1	Data	154
9.3.2	Evaluation Criteria	154
9.3.3	Nonstationary and Nonlinear Tests of Carbon Price	155
9.3.4	Decomposition of EEMD	156
9.3.5	Identification of HFs, LFs, and T	157
9.3.6	Forecasting Results and Analysis	158
9.4	Conclusion	163
