

Contents

Part I Introduction: Research Motivations, Approaches, Challenges, and Overview of Results

1 Research Motivations 3

1.1 “Understanding Intelligence” as the Greatest Problem of the 21st Century. 3

1.2 Personal Research Motivations Based on the Author’s Technical CSE Experiences 7

1.2.1 Author’s Technical Experience: Development of AI Applications and CSE Project Management. 7

1.2.2 PC-TPGP: A Summary of Conclusions Related to Causes of TPGP 11

1.3 Economic Motivations 13

1.4 Summary of Research Motivations 15

2 Research Objectives and Selected Approaches 17

2.1 The Main Research Objectives 17

2.2 Selected Approaches to the Objectives 19

3 Challenges of WisTech (Based on IGrC) for CAS Modeling, Controlling, and Monitoring. 25

3.1 Understanding CAS 29

3.2 Symbol Grounding Problem and Semantic Pointers 30

3.3 Computability by C-granules 31

3.4 Asymptotic Correctness of Learning and Real-Life Problems 33

3.5 Concepts, Agents, Ontologies, Languages, and Societies of Agents 35

3.6 Modeling Compound C-granules as Networks of C-granules 35

3.7	Adaptive Judgment	38
3.8	Wisdom	42
4	Main Overview of Results	45
5	Guide to the Contents of the Book	49
 Part II CSE: Rudiments		
6	The Concept of Complex System	55
6.1	Complex System	55
6.2	Software Intensive Systems	58
6.3	Cyber-Physical System (CPS)	58
6.4	Internet of Things and Wisdom Web of Things	59
6.5	Ultra-Large-Scale Systems (ULS-S)	61
7	Examples of Complex Systems	63
7.1	Natural Computing Systems	63
7.2	Political Systems	66
7.3	Economical Systems	67
7.4	Risk Management Systems	67
7.5	Quality Assurance Systems	68
7.6	Information Security Management Systems	68
7.7	Other Examples of Complex Systems	69
8	Concept of Complex Systems Engineering (CSE)	71
 Part III The Theory-Practice Gap Problem (TPGP)		
9	CSE Practice: CSE Crisis	81
9.1	CSE Crisis: Introduction	81
9.2	CSE Crisis Case Study: Software Crisis	83
9.3	CSE Crisis Case Study: Global Financial Crisis and Risk Management Systems	90
10	CSE Theory: Some Approaches	97
11	TPGP: The Concept of the Theory—Practice Gap Problem	111
12	CSE Crisis: Some Examples of Causes	115
12.1	Causes of CSE Crisis: Communication and Vague Requirements	115
12.2	Causes of CSE Crisis: Partial Perception of Multidimensional Dynamic Complexity	121
12.3	Causes of CSE Crisis: Pitfalls of Thinking Using “Modern” Mathematics	122
12.4	Causes of CSE Crisis: Some Other Common Causes	129

13	Fundamental Precause of CSE Crisis (FP3C)	137
13.1	FP3C: Description	137
13.2	FP3C: Complexity of the Problem	139
13.2.1	FP3C: Problem of Granulation	140
13.2.2	FP3C: Problem of Distributed Computing	141
13.2.3	FP3C: Problem of Interactions and Adaptive Strategies	142
13.2.4	FP3C: Problem of Adaptive Reasoning About Interactive Granular Computations, Induction of Local Models, Their Aggregations and Aggregation of Aggregations	146
14	TPGP: An Approach to Large Scale Context by Adaptive Selection of CSE Principles	151
14.1	TPGP: Y2K and Ultra-Large-Scale Systems (ULS-S) as Examples of Large Scale Contexts	151
14.2	TPGP: Links to Risk Management, Software Engineering, and Artificial Intelligence	154
14.3	TPGP: The Problem of Selection and Adaptation of CSE Principles	157
14.3.1	Approach to TPGP Based on a Skillful Selection, Obedience, and Adaptation of an Appropriate Family of Principles	159
14.3.2	Examples of Universal CSE Principles	163
14.3.3	Examples of Dedicated CSE Principles Concerning Projects Described in Case Studies	181
14.4	Research Motivations Related to the Selection of CSE Principles	182
15	TPGP: WisTech as a “Silver Bullet” for Interactive Approximations	187

Part IV CSE: Case Studies

16	POLTAX	193
16.1	Introduction to POLTAX	193
16.2	POLTAX: Background, Genesis and Goals	198
16.3	POLTAX: Examples of CSE Principles	200
16.3.1	Introduction to POLTAX CSE Principles	201
16.3.2	Examples of Fundamental POLTAX CSE Principles	204
16.3.3	POLTAX Offset Agreements and the HR Development Principle	208
16.3.4	Political Support for the POLTAX CSE Principles	211
16.3.5	Difficulties with the Implementation of the ABC Book for POLTAX	216

16.3.6	POLTAX CSE Principles and Japanese Approach to Complex IT Projects for the Ministry of Finance in Japan.	220
16.3.7	Today and the Future of CSE Principles in POLTAX-Type Projects	224
16.4	POLTAX: Brief History of the First Decade	225
16.5	POLTAX: Main Results	232
16.6	POLTAX: Conclusions.	238
17	AlgoTradix.	243
17.1	AlgoTradix: Background, Genesis and Goals	243
17.2	AlgoTradix: Examples of CSE Principles	249
17.3	AlgoTradix: Brief History.	256
17.4	AlgoTradix: Main Results.	257
17.5	AlgoTradix: Conclusions	264
18	Merix	269
18.1	Merix: Background, Genesis and Goals	269
18.2	Merix: Examples of CSE Principles	270
18.3	Merix: A Brief History.	271
18.4	Merix: Main Results.	272
18.5	Merix: Conclusions.	279
19	Excavio.	281
19.1	Excavio: Background, Genesis and Goals.	281
19.2	Excavio: Examples of CSE Principles	283
19.3	Excavio: A Brief History	295
19.4	Excavio: Main Results	295
19.5	Excavio: Conclusions	296
20	Unmanned Aerial Vehicle (UAV).	297
20.1	UAV: Background, Genesis and Goals.	297
20.2	UAV: Examples of CSE Principles.	298
20.3	UAV: A Brief History	302
20.4	UAV: Main Results	302
20.5	UAV: Conclusions	302
21	Conclusions: Toward Science-Friendly Languages for Interaction Rules & CSE Principles.	303
21.1	Introduction to Some Conclusions from Case Studies.	303
21.2	How to Understand the Essence of Wisdom of Project Managers and Other CSE Project Participants?.	305
21.3	Representation of Interaction, Perception, and Learning Rules by C-granules	306

21.4	Need for Constructing and Improving “a Science-Friendly Language”	309
21.5	Relationships with Rough Sets and Ecorithms	310
Part V CSE as a Metaphor of Mind “Computations”		
22	CSE as Interactive Thinking by Society of Agents	315
23	The Model of Thinking Problem (MT): How Do We Understand and Describe the Processes of Human Thinking, Communicating and Thought-Refinement?	321
23.1	Definition of the Model of Thinking Problem (MT)	321
23.2	Some Acceptance Criteria for Potential MT Solutions	322
23.3	MT Solution Framework.	324
24	Judgment, Constructive Mathematics, and Intuitionism.	327
25	Thinking as a “Languageless Activity of the Mind” Having Its Origin in the Perception of a Move of Time	335
26	Physical World and Uncertainty as Parts of the “Essence of Human Language”	341
Part VI WisTech Approach to Models of Mind: Preliminaries		
27	Preliminaries of IGrC in the Context of Agent Architecture	351
27.1	Agents, Interactions, Perceiving Glasses, and Complex Windows	351
27.2	Some Preliminaries of IGrC	362
28	Selected Distinguishing Properties of WisTech IGrC Models.	367
28.1	Limiting the IGrC Model to Physical World	367
28.1.1	The Physical Nature of Interactions.	368
28.1.2	The Physical Nature of Agent’s Perceiving.	369
28.1.3	The Physical Nature of Agent’s Memory	373
28.1.4	The Physical Nature of Agent’s Control	378
28.1.5	The Physical Nature of Agent’s Perception.	381
28.2	C-granules as Computational Building Blocks for WisTech	389
28.2.1	C-granules as Components of Perception via Interactions	389
28.2.2	Context of Using C-granules in Perception Functioning Schemes in WisTech	397
28.2.3	Examples of C-granules.	403
28.2.4	Interactive Granulation: Aggregation, Decomposition, and Transformation of C-granules	406

28.3	Adaptive Learning of Concept Approximations to Support Agent in the Decision-Making Process	417
28.3.1	Learning Through Memorizing “Important” Patterns	417
28.3.2	“Machine-Like” Learning Process—Interactive Granulation	419
28.4	Language of Agents and Communication	425
28.4.1	Private Language and the Agent’s Infogranules.	425
28.4.2	Language of Communication Among Agents	432
29	The Wisdom Equation and C-granules	435
29.1	Interpretation of the Wisdom Equation as a Basis of C-granules	435
29.2	Wisdom Equation in the Context of CSE Projects	438
30	Some C-granule “Links” to Socratic Dialogues, Tarski Truth, and Semantic Games.	443

Part VII Framework Postulates for Ontology of WisTech Models

31	Complexity of Designing an Ontology for Practically Useful IGrC Models	451
31.1	IGrC and CSE Development Synergy Hypothesis	451
31.2	Communication in CSE Projects from the Perspective of IGrC and CSE Synergy Hypothesis	455
31.3	Level of Difficulty with Basic Ontological Task for IGrC	460
31.4	Logical Structures of Contemporary Mathematics and C-granules for IGrC Models	464
31.4.1	An Introduction to Logical Structures	464
31.4.2	Fundamental Differences Between Concept of C-granule and Concept of Logical Structure.	472
32	Framework Postulates for WisTech (FPW).	477
32.1	The Main Objectives of FPW.	477
32.2	General Structure of Packages of FPW Postulates	478
32.3	Physical Character of Agent, C-granule, and Agent’s Perception.	480
32.3.1	FPW-01: Physical World.	480
32.3.2	FPW-02: Agent’s Networks of Interactions.	480
32.3.3	FPW-03: Agent’s C-granules.	484
32.3.4	FPW-04: Perceivability and Hunk Configurations	486
32.3.5	FPW-05: Predictability and M-hunks.	489
32.3.6	FPW-06: Interactive Computations, Perceiving Attributes, and Hunk Properties.	490
32.3.7	FPW-07: Interaction Properties and Interaction Scene	492

32.3.8	FPW-08: Interaction Plans	494
32.3.9	FPW-09: Agent's Perception	496
32.4	Need Satisfiability, Effectiveness, and Efficiency of Interaction Plans	497
32.4.1	FPW-10: Adaptive Judgment Relative to the Agent's Hierarchy of Needs	497
32.4.2	FPW-11: Cost/Benefit Analysis CBA for Interaction Plans	502
32.4.3	FWP-12: SWOT Analysis and Risks of Interaction Plan	507
32.4.4	FPW-13: Co-risks and Efficiency of Interaction Plans	509
32.4.5	FPW-14: Agent's Most Important Tasks and Their Execution Based on the Process of Perception of a Perceived Situation and Reasoning About It.	511
32.4.6	FPW-15: Communication Among C-granules and Among Agents	513
32.4.7	FPW-16: Cooperation Among Agents for Problem Solving	518

Part VIII WisTech Introduction to Efficient Acting, Learning, and CSE Project Implementation

33	WisTech Approach to Agent's Efficiency Management	525
33.1	"Efficiency" in the Most Important Agent's Tasks	525
33.2	The Role of "Efficiency" and Its Interpretation in AI and CSE Projects	527
33.3	Efficiency Management as an Extension to Risk Management	530
33.4	Agent's Control and Reasoning Based on Agent's Efficiency Management as Illustrated by the Fire and Rescue Operation.	534
33.5	Engine for Efficiency Management (EEM)	540
33.6	An Approach to CSE Based on WisTech Efficiency Management	544
33.7	"Parametrizability" of Efficiency Management Framework (EMF).	554
34	Some Issues of WisTech Approach to CSE	555
34.1	Learning How to Perform Adaptive Judgment About Important Properties of Interactive Computations	555
34.2	Cooperation of Agents and Cooperation of c-granules	561
34.2.1	Some Roots of Wistech Approach to Language	561

34.2.2	Communication by C-granules and/or Agents	566
34.2.3	Cooperation and Competition of C-granules and/or Agents).	569
34.2.4	Agent Language and Communication for Cooperation	573
35	A WisTech Approach to CSE.	579
35.1	Main Objectives for WisTech Approach to Frameworks for CSE	579
35.2	CSE Projects for the Generation of New AI Technologies	581
35.3	C-granular Fire and Rescue Operations: A WisTech Approach to an Intelligent Commander's Remote Control	585
36	Conclusions and Future Research	587
36.1	Conclusions	587
36.2	Future Research	601
Appendix A: Principle of Anchoring a Project in Top Management—Examples of Detailed Principles		603
Appendix B: Principle of Providing a Proper Role of the Human Factor in Management—Examples of Detailed Principles.		605
Appendix C: Principle of Providing a Proper Level of Communication—Examples of Detailed Principles		607
Appendix D: IV&V Team—Examples of Detailed Principles		611
Appendix E: Principle of an Appropriate Document Management—Examples of Detailed Principles		613
Appendix F: Examples of Basic Principles of CSE Project Development (BPCD)		617
Appendix G: Criteria for the Optimization of a Family of Currently Used Principles—Examples		623

Interactive Granular Computations in Networks and
Systems Engineering: A Practical Perspective

Jankowski, A.

2017, XLIII, 654 p. 137 illus., 102 illus. in color.,

Hardcover

ISBN: 978-3-319-57626-8
