1	General Considerations	1
1.1	Introduction	1
1.2	General Concepts Related to Grids	2
1.2.1	Grid Cells	3
1.2.2	Requirements Imposed on Grids	6
1.2.3	Grid Classes	13
1.3	Methods for Grid Generation	27
1.3.1	Mapping Methods	28
1.3.2	Methods for Unstructured Grids	36
1.4	Big Codes	37
1.4.1	Interactive Systems	38
1.4.2	New Techniques	39
1.5	Comments	40
	References	42
2	Coordinate Transformations	47
2.1	Introduction	47
2.2	General Notions and Relations	48
2.2.1	Jacobi Matrix	48
2.2.2	Tangential Vectors	49
2.2.3	Normal Vectors	51
2.2.4	Representation of Vectors Through the Base Vectors	53
2.2.5	Metric Tensors	55
2.2.6	Cross Product	58
2.3	Relations Concerning Second Derivatives	61
2.3.1	Christoffel Symbols	62
2.3.2	Differentiation of the Jacobian	63
2.3.3	Basic Identity	64

2.4	Conservation Laws	67
2.4.1	Scalar Conservation Laws	67
2.4.2	Vector Conservation Laws.	69
2.5	Time-Dependent Transformations	73
2.5.1	Reformulation of Time-Dependent Transformations . . .	74
2.5.2	Basic Relations	75
2.5.3	Equations in the Form of Scalar Conservation Laws	77
2.5.4	Equations in the Form of Vector Conservation Laws	81
2.6	Comments.	85
	References.	85
3	Grid Quality Measures	87
3.1	Introduction	87
3.2	Curve Geometry	88
3.2.1	Basic Curve Vectors	88
3.2.2	Curvature.	90
3.2.3	Torsion	91
3.3	Surface Geometry	92
3.3.1	Surface Base Vectors.	93
3.3.2	Metric Tensors.	94
3.3.3	Second Fundamental Form	96
3.3.4	Surface Curvatures	97
3.3.5	Curvatures of Discrete Surfaces.	99
3.4	Metric-Tensor Invariants.	101
3.4.1	Algebraic Expressions for the Invariants	101
3.4.2	Geometric Interpretation	102
3.5	Characteristics of Grid Lines	104
3.5.1	Sum of Squares of Cell Edge Lengths.	104
3.5.2	Eccentricity	105
3.5.3	Curvature.	105
3.5.4	Measure of Coordinate Line Torsion.	109
3.6	Characteristics of Faces of Three-Dimensional Cells	109
3.6.1	Cell Face Skewness.	109
3.6.2	Face Aspect-Ratio	110
3.6.3	Cell Face Area Squared.	111
3.6.4	Cell Face Warping	111
3.7	Characteristics of Grid Cells.	113
3.7.1	Cell Aspect-Ratio	113
3.7.2	Square of Cell Volume	113
3.7.3	Cell Area Squared	114
3.7.4	Cell Skewness.	114
3.7.5	Characteristics of Nonorthogonality.	115

3.7.6	Grid Density	116
3.7.7	Characteristics of Deviation from Conformality.	117
3.7.8	Grid Eccentricity	121
3.7.9	Measures of Grid Warping and Grid Torsion	122
3.7.10	Quality Measures of Simplexes	122
3.8	Comments.	123
	References.	124
4	Stretching Method.	127
4.1	Introduction	127
4.2	Formulation of the Method.	129
4.3	Theoretical Foundation	130
4.3.1	Model Problems	132
4.3.2	Basic Majorants.	135
4.4	Basic Intermediate Transformations	150
4.4.1	Basic Local Stretching Functions.	150
4.4.2	Basic Boundary Contraction Functions	154
4.4.3	Other Univariate Transformations	160
4.4.4	Construction of Basic Intermediate Transformations	162
4.4.5	Multidirectional Equidistribution	165
4.5	Comments.	167
	References.	170
5	Algebraic Grid Generation	175
5.1	Introduction	175
5.2	Transfinite Interpolation	175
5.2.1	Unidirectional Interpolation	176
5.2.2	Tensor Product	177
5.2.3	Boolean Summation	178
5.3	Algebraic Coordinate Transformations	181
5.3.1	Formulation of Algebraic Coordinate Transformation	181
5.3.2	General Algebraic Transformations	183
5.4	Lagrange and Hermite Interpolations	185
5.4.1	Coordinate Transformations Based on Lagrange Interpolation	186
5.4.2	Transformations Based on Hermite Interpolation.	191
5.5	Control Techniques.	194
5.6	Transfinite Interpolation from Triangles and Tetrahedrons	196
5.7	Drag and Sweeping Methods	199
5.8	Comments.	199
	References.	200
