

# Contents

## Part I Theory

<b>Emergence of Non-Gaussianity in Turbulence</b> . . . . .	3
Michael Wilczek, Dimitar G. Vlaykov and Cristian C. Lalescu	
<b>Percolation: Statistical Description of a Spatial and Temporal Highly Resolved Boundary Layer Transition</b> . . . . .	11
Tom T.B. Wester, Dominik Traphan, Gerd Gülker and Joachim Peinke	
<b>The Key Role of Pressure in the Turbulence Cascading Process.</b> . . . .	17
Patrick Bechlars and Richard D. Sandberg	
<b>Lagrangian Intermittency Based on an Ensemble of Gaussian Velocity Time Series</b> . . . . .	23
Laura J. Lukassen and Michael Wilczek	

## Part II Wall Bounded Flows

<b>Convection Velocity Variation as a Result of Amplitude Modulation Phenomena</b> . . . . .	33
Artur Drózdź and Witold Elsner	
<b>On the Turbulent Boundary Layer with Wall Suction.</b> . . . .	39
Marco Ferro, Bengt E.G. Fallén and Jens H.M. Fransson	
<b>DNS of Couette Flows With Wall Transpiration up to <math>Re_\tau = 1000</math></b> . . . .	45
Stefanie Kraheberger, Sergio Hoyas and Martin Oberlack	
<b>Flow Structures and Momentum Transport in Turbulent Rotating Plane Couette Flow</b> . . . . .	51
Takuya Kawata and P. Henrik Alfredsson	

<b>Towards a Physical Scale Decomposition of Mean Skin Friction Generation in the Turbulent Boundary Layer</b> . . . . .	59
Nicolas Renard and Sébastien Deck	
<b>Identifying Well-Behaved Turbulent Boundary Layers</b> . . . . .	67
Carlos Sanmiguel Vila, Ricardo Vinuesa, Stefano Discetti, Andrea Ianiro, Philipp Schlatter and Ramis Örlü	
<b>Scaling of Adverse-Pressure-Gradient Turbulent Boundary Layers in Near-Equilibrium Conditions</b> . . . . .	73
Ricardo Vinuesa, Alexandra Bobke, Ramis Örlü and Philipp Schlatter	
<b>Part III Pipe Flows</b>	
<b>Transitional and Turbulent Bent Pipes</b> . . . . .	81
Philipp Schlatter, Azad Noorani, Jacopo Canton, Lorenz Hufnagel, Ramis Örlü, Oana Marin and Elia Merzari	
<b>Turbulent Pipe Flow Near-Wall Statistics</b> . . . . .	89
Tommaso Fiorini, Gabriele Bellani, Ramis Örlü, Antonio Segalini, P. Henrik Alfredsson and Alessandro Talamelli	
<b>High Reynolds Number Experimental Facilities for Turbulent Pipe Flow at NMIJ</b> . . . . .	95
Noriyuki Furuichi, Yoshiya Terao and Yoshiyuki Tsuji	
<b>Wavenumber Dependence of Very Large-Scale Motions in CICLoPE at <math>4800 \leq Re_\tau \leq 37,000</math></b> . . . . .	101
Emir Öngüner, El-Sayed Zanoun, Tommaso Fiorini, Gabriele Bellani, Amir Shahirpour, Christoph Egbers and Alessandro Talamelli	
<b>Streamwise Auto-Correlation Analysis in Turbulent Pipe Flow Using Particle Image Velocimetry at High Reynolds Numbers</b> . . . . .	107
Emir Öngüner, El-Sayed Zanoun and Christoph Egbers	
<b>Part IV Modelling</b>	
<b>Subgrid-Scale Model with Structural Effects Incorporated Through the Helicity</b> . . . . .	115
Nobumitsu Yokoi and Akira Yoshizawa	
<b>Fractional Turbulence Models</b> . . . . .	123
Peter W. Egolf and Kolumban Hutter	
<b>A Framework for the Assessment and Creation of Subgrid-Scale Models for Large-Eddy Simulation</b> . . . . .	133
Maurits H. Silvis, Ronald A. Remmerswaal and Roel Verstappen	

<b>Towards an Improved Subgrid-Scale Model for Thermally Driven Flows . . . . .</b>	<b>141</b>
Riccardo Togni, Andrea Cimarelli and Elisabetta De Angelis	
<b>Integral Formula for Determination of the Reynolds Stress in Canonical Flow Geometries . . . . .</b>	<b>147</b>
Tae-Woo Lee and Jung Eun Park	
<b>A Matrix-Free Incompressible DG Algorithm for the Simulation of Turbulent Flows . . . . .</b>	<b>153</b>
Andrea Crivellini, Matteo Franciolini and Alessandra Nigro	
<b>Part V Experiments</b>	
<b>Measurement of Turbulent Spatial Structure and Kinetic Energy Spectrum—Part 1: Convection Record Method. . . . .</b>	<b>163</b>
Preben Buchhave and Clara M. Velte	
<b>Measurement of Turbulent Spatial Structure and Kinetic Energy Spectrum—Part 2: Convection Record Measurements . . . . .</b>	<b>171</b>
Clara M. Velte, Preben Buchhave and Azur Hodžić	
<b>Comparison of the Development of a Wind Turbine Wake Under Different Inflow Conditions . . . . .</b>	<b>177</b>
Ingrid Neunaber, Jannik Schottler, Joachim Peinke and Michael Hölling	
<b>The Development of Packets of Hairpin Vortices in Laminar Channel Flows in Response to Localized Disturbances . . . . .</b>	<b>183</b>
Jun-De Li	
<b>Very Large-Scale Feature of Transitional and Turbulent Channel Flows: Dependence on Facilities . . . . .</b>	<b>189</b>
Shun Horii, Yoshiyuki Sagawa, Makoto Miyazaki and Masaharu Matsubara	
<b>Part VI Miscellaneous Topics</b>	
<b>Turbulence Structure Analysis of DNS Data Using DMD and SPOD: Mixing Jet and Channel Flow . . . . .</b>	<b>199</b>
Abouelmagd Abdelsamie, Gábor Janiga, Cheng Chi and Dominique Thévenin	
<b>Signature of a Cubical Canopy on the Spatial Dynamics of an Atmospheric Boundary Layer . . . . .</b>	<b>205</b>
Jérémy Basley and Laurent Perret	
<b>Near and Far-Field Analysis of an Axisymmetric Fractal-Forced Turbulent Jet. . . . .</b>	<b>211</b>
Massimiliano Breda and Oliver R.H. Buxton	

<b>Study of Energetics in Drag-Reduced Turbulent Channel Flows . . . . .</b>	<b>219</b>
Davide Gatti, Maurizio Quadrio, Andrea Cimarelli, Yosuke Hasegawa and Bettina Frohnappel	
<b>Evolution of Vortex Formation in the Wake of Thin Flat Plates with Different Aspect-Ratios. . . . .</b>	<b>227</b>
Arman Hemmati, David H. Wood and Robert J. Martinuzzi	
<b>Structure of Turbulence in a Flow Around a Rectangular Cylinder. . . . .</b>	<b>233</b>
Adriano Leonforte, Andrea Cimarelli and Diego Angeli	
<b>Application of Sponge Boundary Conditions to Large-Eddy Simulation of Multiple Thermal Plumes . . . . .</b>	<b>239</b>
Chandra Shekhar Pant and Amitabh Bhattacharya	
<b>Heat Transport in Horizontal and Inclined Convection. . . . .</b>	<b>245</b>
Olga Shishkina	

Progress in Turbulence VII

Proceedings of the iTi Conference in Turbulence 2016

Örlü, R.; Talamelli, A.; Oberlack, M.; Peinke, J. (Eds.)

2017, XV, 250 p. 113 illus., 89 illus. in color., Hardcover
