

Contents

1	Envision	1
1.1	Evolution of Metalworking	2
1.2	Advent of Computers	4
1.3	Invention of 3D Printing	5
1.4	Key Take Away Points	6
2	Additive Manufacturing Metal, the Art of the Possible	7
2.1	AM Destinations: Novel Applications and Designs	7
2.2	Artistic	9
2.3	Personalized	11
2.4	Medical	13
2.5	Aerospace	16
2.6	Automotive	19
2.7	Industrial Applications Molds and Tooling	21
2.8	Remanufacture and Repair	22
2.9	Scanning and Reverse Engineering	24
2.10	Software	26
2.11	Engineered Structures	27
2.12	Functionally Graded Structures and Intermetallic Materials	28
2.13	Technology Demonstration	30
2.14	Hybrid Additive/Subtractive Systems	31
2.15	Key Take Away Points	32
3	On the Road to AM	35
3.1	You are Here →	35
3.2	AM Metal Machines, the Vehicles to Take You There	37
3.3	Market and Technology Drivers	44
3.4	A Pocket Translator: The Language of AM	47
3.5	Key Take Away Points	48

4	Understanding Metal for Additive Manufacturing	49
4.1	Structure	50
4.1.1	Solid, Liquid, Gas, and Sometimes Plasma	50
4.1.2	Elements and Crystals	51
4.2	Physical Properties	54
4.2.1	Thermal Properties	54
4.2.2	Mechanical Properties	55
4.2.3	Electrical, Magnetic, and Optical Properties	56
4.3	Chemistry and Metallurgy	57
4.3.1	Physical Metallurgy	57
4.3.2	Ease of Fabrication	59
4.3.3	Process Metallurgy	59
4.3.4	Sintered Microstructures	60
4.3.5	Solidification Microstructures	62
4.3.6	Bulk Properties	68
4.4	Forms of Metal	69
4.4.1	Commercial Shapes	69
4.4.2	Metal Powder	71
4.4.3	Wire and Electrodes	77
4.4.4	Graded Materials	78
4.4.5	Composites, Intermetallic, and Metallic Glass	79
4.4.6	Recycled Metal	80
4.4.7	Recycle and Reuse of AM Metal Powders	81
4.5	Key Take Away Points	82
5	Lasers, Electron Beams, Plasma Arcs	85
5.1	The Molten Pool	85
5.2	Lasers	87
5.3	Electron Beams	90
5.4	Electric and Plasma Arcs	93
5.5	Hybrid Heat Sources	96
5.6	Key Take Away Points	96
6	Computers, Solid Models, and Robots	99
6.1	Computer-Aided Design	100
6.2	Computer-Aided Engineering	105
6.3	Computer-Aided Manufacturing	109
6.4	Computerized Numerical Control	111
6.5	Robotics	112
6.6	Monitoring and Real-Time Control	114
6.7	Remote Autonomous Operations	115
6.8	Key Take Away Points	116

7	Origins of 3D Metal Printing	119
7.1	Plastic Prototyping and 3D Printing	120
7.2	Weld Cladding and 3D Weld Metal Buildup	123
7.3	Laser Cladding	125
7.4	Powder Metallurgy	126
7.5	Key Take Away Points.	128
8	Current System Configurations	131
8.1	Laser Beam Powder Bed Fusion Systems.	134
8.1.1	Advantages of PBF-L	135
8.1.2	Limitations of PBF-L	140
8.2	Laser Beam Directed Energy Deposition Systems	147
8.2.1	Advantages of DED-L.	151
8.2.2	Limitations of DED-L.	155
8.3	Additive Manufacturing with Electron Beams	157
8.3.1	Electron Beam Powder Bed Fusion Systems.	157
8.4	Electron Beam-Directed Energy Deposition Systems	161
8.5	3D Metal Printing with Arc Welding Systems	166
8.6	Other AM Metal Technology	171
8.6.1	Binder Jet Technology.	172
8.6.2	Plastic Tooling in Support of Metal Fabrication	174
8.6.3	Plastic and Wax Printing Combined with Casting	174
8.6.4	Ultrasonic Consolidation	175
8.6.5	Cold Spray Technology.	175
8.6.6	Nano and Micro Scale Methods	176
8.7	Key Take Away Points.	177
9	Inspiration to 3D Design.	181
9.1	Inspired Design.	181
9.2	Elements of Design.	184
9.2.1	Material Selection	185
9.2.2	Process Selection.	189
9.3	Solid Freeform Design	190
9.3.1	Design Freedom Offered by AM.	194
9.3.2	AM Metal Design Constraints.	198
9.4	Additional Design Requirements.	201
9.4.1	Support Structure Design.	201
9.4.2	Design of Fixtures, Jigs, and Tooling	203
9.4.3	Test Specimen Design.	204
9.4.4	Prototype Design.	204
9.4.5	Hybrid Design.	205
9.5	Cost Analysis	205
9.6	Key Take Away Points.	209

10 Process Development	211
10.1 Parameter Selection	211
10.2 Parameter Optimization	216
10.3 Specifying Pre-build and Monitoring Procedures	223
10.3.1 Monitoring of Process Quality	225
10.3.2 In-Process Part Quality Monitoring	226
10.4 Repair or Restart Procedures	227
10.5 Key Take Away Points	228
11 Building, Post-Processing, and Inspecting	229
11.1 Building the Part	229
11.2 Post-Processing and Finishing	230
11.3 Bulk Deposit Defects	234
11.4 Dimensional Accuracy, Shrinkage, and Distortion	242
11.5 Inspection, Quality, and Testing of AM Metal Parts	242
11.5.1 Nondestructive Test Methods	243
11.5.2 Destructive Test Methods	246
11.5.3 Form, Fit, Function, and Proof Testing	249
11.6 Standards and Certification	250
11.7 Key Take Away Points	252
12 Trends in AM, Government, Industry, Research, Business	255
12.1 Government and Community	256
12.2 University and Corporate Research	264
12.3 Industrial Applications	268
12.4 Business and Commerce	275
12.5 Intellectual Property, Security, and Regulation	281
12.6 Social and Global Trends	287
12.6.1 Diffusion of Power	289
12.6.2 Demographics, Information, Mobility, Education, Connectivity	289
12.6.3 Food, Water, Energy, Population Growth	290
12.7 Trends in Additive Manufacturing	290
12.7.1 Top AM Technology and Market Destinations	291
12.7.2 The First Steps Toward AM Metal	292
Professional Society and Organization Links	293
AM Machine and Service Resource Links	295
Appendix A: Safety in Configuring a 3D Metal Printing Shop	299
Appendix B: Exercises in Metal Fusion	307
Appendix C: OpenSCAD Programming Example	311

Appendix D: 3D Printer Control Code Example 315

Appendix E: Building an Arc Based 3D Shape Welding System. 317

Appendix F: Exercises in 3D Printing 319

Appendix G: Score Chart of AM Skills. 323

Glossary 325
