

SpringerBriefs in Materials

The SpringerBriefs Series in Materials presents highly relevant, concise monographs on a wide range of topics covering fundamental advances and new applications in the field. Areas of interest include topical information on innovative, structural and functional materials and composites as well as fundamental principles, physical properties, materials theory and design. SpringerBriefs present succinct summaries of cutting-edge research and practical applications across a wide spectrum of fields. Featuring compact volumes of 50 to 125 pages, the series covers a range of content from professional to academic. Typical topics might include

- A timely report of state-of-the art analytical techniques
- A bridge between new research results, as published in journal articles, and a contextual literature review
- A snapshot of a hot or emerging topic
- An in-depth case study or clinical example
- A presentation of core concepts that students must understand in order to make independent contributions

Briefs are characterized by fast, global electronic dissemination, standard publishing contracts, standardized manuscript preparation and formatting guidelines, and expedited production schedules.

Acknowledgements

The authors thank the wonderful team at Springer, especially the very patient and understanding editors, for their wonderful insights and guidance through the writing process. Moreover, the authors would like to thank the Air Force Office of Scientific Research (S.M.) and the National Science Foundation (B.W.B.) for their generosity in supporting the work associated with this endeavor.

Contents

Acknowledgements	v
About the Authors	ix
1 An Introduction to Radical Polymers	1
1.1 Organic Materials in Modern Life	1
1.2 Organic Radicals	5
1.3 The Chemistry of Reactive Radicals.....	5
1.4 Opportunities for Stable Radicals	7
1.5 Radicals as Basic Units of Polymeric Structures.....	9
1.5.1 Radical Polymers	10
1.5.2 Polyradicals.....	10
1.6 Physical Properties of Radical Polymers	12
1.7 Chapter Summary	12
References.....	13
2 Syntheses of Radical Polymers	17
2.1 Expectations and Synthetic Limitations: Optimizing the Design of Radical Polymers.....	17
2.2 Different Strategies in the Syntheses of Radical Polymers.....	17
2.3 Conjugated Radical Polymers.....	29
2.4 Polyradicals.....	30
2.5 Chapter Summary	33
References.....	33
3 Applications of Radical Polymers in Electrolyte-Supported Devices	37
3.1 Electrolyte-Supported Redox Reactions of Radicals: Opportunities and Applications	37
3.2 Radical Polymers in Energy Storage	38
3.3 Radical Polymers as Battery Electrodes	40
3.4 Controlling Capacity Fading in ORBs.....	42

3.5	Aqueous Electrolyte Supported ORBs.....	44
3.6	Radical Polymers in Flow Batteries.....	45
3.7	Functional Carbon Composites of Radical Polymers	48
3.8	Fully Organic Rechargeable Radical Polymer Batteries.....	51
3.9	Chapter Summary	52
	References.....	53
4	Applications of Radical Polymers in Solid-State Devices	57
4.1	Application of Radical Polymers to Solid-State Devices	57
4.2	Charge Storage Inspired Organic Electronics.....	58
4.3	Charge Transport in Radical Polymers	62
4.3.1	Initial Observations and Related Opportunities.....	62
4.3.2	Chemistry and Conductivity! Doping of Radical Polymers.....	64
4.4	Radical Polymers in Other Avenues of Organic Electronics	68
4.5	Chapter Summary	70
	References.....	70
5	Conclusions and Future Outlook.....	73
5.1	A Quiet Past, an Exciting Present, and a Revolutionary Future.....	73
5.2	The Future of Radical Polymers	74
	Index.....	77

About the Authors

Sanjoy Mukherjee is currently a postdoctoral research associate working with Prof. Bryan W. Boudouris in the Charles D. Davidson School of Chemical Engineering at Purdue University. Dr. Mukherjee earned his undergraduate and graduate chemistry degrees at the University of Calcutta and the Indian Institute of Science, respectively. Dr. Mukherjee has also worked at the Institut für Anorganische Chemie, Universität Würzburg, Germany as a DAAD sponsored visiting fellow during his doctoral studies. His current research interests focus on the structure--property relationships, optical properties, and charge transport mechanisms in radical polymers.

Bryan W. Boudouris is the Robert and Sally Weist Associate Professor of Chemical Engineering and an Associate Professor of Chemistry (by courtesy) in the Charles D. Davidson School of Chemical Engineering at Purdue University. Professor Boudouris earned undergraduate and graduate chemical engineering degrees at the University of Illinois at Urbana-Champaign and the University of Minnesota, respectively. After the completion of his doctoral studies, he held a joint post-doctoral researcher position at the University of California, Berkeley and Lawrence Berkeley National Laboratory. Professor Boudouris started his independent academic career at Purdue University in August 2011, and the work of his group focuses on the synthesis, nanostructural characterization, and implementation of functional macromolecules for advanced energy, water, and security applications.
