

Contents

1	Introduction and Orientation	1
2	Units and Orders of Magnitude	13
2.1	External Interactions and Newton's Unit.	14
2.2	Speed of Light as Space-Time Hinge	17
2.3	Gravity and Maximal Speed of Action	20
2.4	Quantum Structure and Planck's Unit.	22
2.5	Minimal Quantum of Action and Maximal Speed of Action	24
2.6	Intrinsic Units	25
2.7	The (\hbar, c, G) -System — Universal Units?	29
2.8	Electrodynamics and Sommerfeld's Fine-Structure Constant	34
2.9	Binding Energies and Couplings.	38
2.10	Electroweak Interactions	41
2.11	Units and Symmetry Normalizations.	45
3	How Complex Is Nature?	51
3.1	Numbers for Objects and Time.	53
3.2	Numbers as Operations — From the Naturals to the Rationals.	56
3.3	Discrete and Continuous — From the Rationals to the Reals.	60
3.4	Constancy in Change — From the Real to the Complex Numbers	64
3.5	Dynamics as Time Action.	68
3.6	Modalities.	74
3.7	Non-commutative Numbers — Quaternions	75
3.8	Non-commutative Complex Operations.	77
3.9	Causal Minkowski Spacetime	80

3.10	Hypercharge Group and Isospin Group	82
3.11	Lorentz Group and Poincaré Group	83
3.12	Internal Scalar Product and External Lorentz Metric	88
3.13	Operational Spacetime	90
4	Plato's Beautiful Symmetry	93
4.1	Regular Polygons and Platonic Triangles	94
4.2	Platonic Solids	98
4.3	Plato's Immaterial Basic Physics	99
4.4	Dual Platonic Solids	101
4.5	Soccer Molecules	102
4.6	Coordinates for Platonic Solids	104
4.7	Kepler's <i>Mysterium Cosmographicum</i>	106
4.8	Polytopes and Mosaics	109
4.9	Orthogonal Symmetry Groups	112
4.10	Erlangen Program of Geometry	118
4.11	Erlangen Program of Flat Space-Time	119
4.12	Simple Lie Operations	121
4.13	Lie Symmetries and Metrical Structures	124
4.14	The Simplest Simple Symmetry	126
4.15	Quantum Numbers and Weights of Simple Lie Algebras	129
4.16	Weights, Roots, and Weyl Mirrors	130
4.17	Decomposition of Product Representations	131
4.18	Squares and the Physics of Atoms	132
4.19	Plato's Polytopes and Cartan's Weight Diagrams	137
4.20	Quark Flavors	142
4.21	Plato's Triangles and Dynkin's Diagrams	144
4.22	Fundamental Representations	147
4.23	Quantum Theory and Symmetry	151
4.24	Basic Internal Symmetry Program	153
4.25	Basic External Symmetry Program	155
5	Circles and Winding Numbers	159
5.1	Circles on the Earth and in the Sky	160
5.2	Winding Numbers and Unit Roots	161
5.3	Electromagnetic Winding Numbers	164
5.4	Energies and Time-Winding Numbers	165
5.5	Spin Winding Numbers	167
5.6	Windings of the Binary Alternative	169
5.7	Charge Numbers of Leptons and Quarks	171
5.8	Winding Number Matrices and Representation Weights	172
5.9	Fractionality of Unitary Group Representations	175
5.10	Adjoint Winding Numbers and Adjutopes	179
5.11	Additive Unification of Unitary Symmetries	180

5.12	Fractionality Correlations for Unitary Groups	183
5.13	Broken Winding Numbers	185
5.14	Broken Hypercharges and Nonabelian Internal Symmetry	187
5.15	Young Frames for $SU(n)$ -Representations	191
5.16	Young Tableaux for Young Frames	193
5.17	Box-Matrix Algebras	195
5.18	Algebras for Finite Groups	197
6	The Hall of Mirrors	201
6.1	Reflection Group and Orthogonality	202
6.2	Reflections of Time and Position	205
6.3	Reflection by Conjugation	206
6.4	Dual Involutors and Conjugations.	207
6.5	Creation-Annihilation Conjugation	208
6.6	The Dual Reflection Klein Group.	210
6.7	(Iso)Spin Reflections.	211
6.8	Euclidean Conjugation and Anticonjugation	213
6.9	Particle-Antiparticle Quartets	214
6.10	Spinless Particles with Isospin	216
6.11	Quartets of Complex Representations	219
6.12	The Weyl Spinor Quartet	222
6.13	Interlocking Field and Particle Quartets	224
6.14	Left-Right (Chiral) Reflection	229
6.15	Fields with Spin and Isospin.	230
6.16	Quark Fields Without Quark Particles.	231
7	Telescopes for Symmetries	233
7.1	Symmetry Telescopes	234
7.2	Subgroup Equivalences and Embedding Manifolds.	235
7.3	Self-Operations	237
7.4	Normal and Ideal Transitions, Simple Symmetries	239
7.5	Relativities and Homogeneous Spaces	241
7.6	Products and Factorizations of Groups	243
7.7	Abel Telescopes	245
7.8	Power Telescopes	248
7.9	The Heisenberg Lie Algebra and Group	249
7.10	Orbits and Fixgroups	253
7.11	Orbits of Minkowski Spacetime	256
7.12	Orbits of the Heisenberg Group	259
7.13	Squares and Their Symmetries	260
7.14	Stability Groups of Vector Space Decompositions	263
7.15	Polar Decompositions	264
7.16	Sylvester and Witt Transitions	267
7.17	Bases of Minkowski Translations	269

7.18	The Manifold of the Lorentz Tetrads	272
7.19	External Transitions in the Electroweak Standard Model	275
7.20	Fields with Group Actions	277
7.21	Symmetry Transitions by Fields	279
7.22	Decomposition-Transmutators	281
7.23	Field-Particle Transmutators in the Standard Model	282
7.24	The Four Symmetry Regimes of the Standard Model	284
7.25	Fiber Bundles and Spacetime Bundles	287
7.26	Riemannian Manifolds	290
7.27	Spheres and Hyperboloids.	295
7.28	Maximally Symmetric Manifolds	299
7.29	Derivations and Gauge Fields	301
7.30	Curvatures and Field Strengths	303
7.31	Electroweak and Strong Gauge Interactions	307
7.32	Representation Currents and Gauge Vertices	311
7.33	Electroweak Ground State and Masses	314
8	Classical and Quantum Logics	321
8.1	Predicates and Relations	323
8.2	Aristotelian Syllogisms	325
	8.2.1 Strong Syllogisms	326
	8.2.2 Weak Syllogisms	329
	8.2.3 Traditional Syllogisms	329
8.3	Conjunction, Negation, and Adjunction	330
8.4	The System of the Junctors	332
8.5	Falsum and Verum	333
8.6	Classes and Sets	334
	8.6.1 Compression of Sets	335
	8.6.2 Subclasses and Junctor Classes	336
	8.6.3 Atom Classes and Power Classes	338
8.7	The Natural Numbers	340
8.8	Axioms of Set Theory	341
8.9	Implication (Order) and Equivalence	342
	8.9.1 Examples for Order and Implication	344
8.10	Lattices and Logics	346
8.11	Classical (Boole–Stone) Logics	349
8.12	Quantum (Birkhoff–von Neumann) Logics	351
9	Classical and Quantum Probability	355
9.1	Truth Tables and Truth Valuations	357
9.2	Measures of Lattices and Logics	358
9.3	Probabilities of Boole–Stone Logics	360
9.4	Probability Densities and Distributions	362
9.5	Lebesgue Function Spaces	364

9.6	Haar Measures of Operation Groups	366
9.7	Operators and Matrices	367
9.8	Probability Amplitudes and Uncertainties	371
	9.8.1 States of Operator Algebras	371
	9.8.2 Cyclic Hilbert Spaces for Algebra States	373
9.9	Bose and Fermi Quantum Algebras	375
9.10	Hilbert Spaces for $U(1)$ and $D(1)$	379
9.11	Group Algebras and Representation Spaces	380
	9.11.1 Bi-Regular and Induced Representations	383
	9.11.2 Finite Groups and Convolution Algebras	384
	9.11.3 Algebras and Vector Spaces for Locally Compact Groups	385
9.12	Schur Product and Hilbert Spaces for Groups	388
	9.12.1 Duality for Group Function Spaces	389
	9.12.2 Hilbert Metrics of Cyclic Representation Spaces	389
9.13	Harmonic Analysis of Group Functions	393
9.14	Schur Orthogonality and Frobenius Reciprocity for Compact Groups	396
9.15	Translation Representations	401
	9.15.1 Fourier Transformation	401
	9.15.2 Cyclic Translation Representations	402
9.16	Product Representations on Polynomials	404
9.17	Harmonic Polynomials for Orthogonal Groups	406
9.18	Harmonic Analysis of Hyperboloids	408
9.19	Irreducible Representations of the Lorentz Group	410
9.20	Compact–Noncompact Pairing	413
9.21	Special Functions in Basic Physics	416
10	Free States and Particles	425
10.1	Irreducible Representations of Translations	427
10.2	Euclidean and Minkowskian Translations	429
10.3	Time and Position Projections	431
10.4	Rotations and Translations	432
10.5	Rotation and Translation Invariants	435
10.6	Hilbert Metric Inducing Functions	438
10.7	Hilbert Spaces for Translations	440
10.8	Orbits and Decomposition-Transmutators	445
	10.8.1 Axial Rotations in Rotations	446
	10.8.2 Rotations in Lorentz Transformations	448
10.9	Polarization and Spin Projectors	450
	10.9.1 Polarized States for Nonrelativistic Scattering	450
	10.9.2 Spinning Particles in Relativistic Fields	451
10.10	Hilbert Spaces for Euclidean Position and Minkowski Spacetime	453

10.11	Harmonic Analysis for Euclidean Position and Minkowski Spacetime	455
10.12	Unstable Particles	457
	10.12.1 Reflections of Translations.	458
	10.12.2 Breit–Wigner Functions for Time	458
	10.12.3 Hilbert Spaces for Unstable Particles.	460
10.13	Collectives with Unstable Particles	462
	10.13.1 Metrical Matrices for Collectives.	462
	10.13.2 The Neutral Kaon Collective	465
10.14	Unstable Relativistic Particles	466
	10.14.1 Breit–Wigner Functions for Position	466
	10.14.2 Breit–Wigner Densities of Energy-Momenta	467
	10.14.3 Time-Position Projections for Unstable Particles	468
11	Operational Position and the Atomic Spectrum	469
11.1	Operational Positions	470
11.2	Special Position Functions	472
11.3	Schrödinger’s Position Representations.	475
11.4	Euclidean Position and Free Scattering	476
11.5	Kepler Position and the Atomic Spectrum	479
11.6	Dipoles for Hyperbolic 3-Position.	483
11.7	Maximally Symmetric Positions	487
	11.7.1 Spherical and Hyperbolic Coefficients	487
	11.7.2 Odd-Dimensional Hyperboloids and Spheres.	489
11.8	Normalized Position Representations	492
11.9	Harmonic Oscillators	494
	11.9.1 Position Representation	495
	11.9.2 “Color” SU(3) for 3-Position.	498
11.10	Quantum Fields of Positions.	500
	11.10.1 Quantum Fields of Euclidean Position.	500
	11.10.2 Quantum Fields of Hyperbolic Position.	501
12	Operational Spacetime and the Particle Spectrum	507
12.1	Operational Spacetimes.	509
12.2	Special Spacetime Distributions	512
12.3	Maximally Symmetric Spacetimes	514
12.4	Minkowski Spacetime.	516
12.5	Coulomb and Newton Interactions	522
12.6	General Feynman Propagators.	527
12.7	Spherical and Hyperbolic Invariants for Indefinite Orthogonal Groups	529

- 12.8 Chirally Degenerate Ground-State. 532
 - 12.8.1 Chirality. 533
 - 12.8.2 Chiral Degeneracy and Representation
Normalization 534
 - 12.8.3 Massless Chiral Boson. 536
- 12.9 Electroweak Spacetime 538
 - 12.9.1 Dilation and Translation Parametrizations
of Causal Spacetimes. 539
 - 12.9.2 The Causal Cartan Plane 541
 - 12.9.3 Even-Dimensional Causal Spacetimes 543
 - 12.9.4 Spacetime Hilbert Spaces. 546
- 12.10 Products of Representation Distributions. 548
 - 12.10.1 Residual Normalizations 548
 - 12.10.2 Convolution Products of Feynman Distributions 549
 - 12.10.3 Point and Line Convolutions 551
 - 12.10.4 Convolution Modules and Algebras. 553
- 12.11 Normalizations of Feynman Measures 556
- 12.12 Normalized Spacetime Representations 558
 - 12.12.1 Logarithmic Mass Ratios
for Indefinite Spacetimes 559
 - 12.12.2 Multiplicities for External Degrees of Freedom 561
 - 12.12.3 Multiplicities for Internal Degrees of Freedom 561
- 12.13 Particles and Interactions of Spacetime 563
- 12.14 Massless Poles for $D(1)$ -Degeneracy 565
- Bibliography** 567
- Index** 571
