1	Introduction to Particle Physics at Hadron Colliders	1
1.1	The Standard Model of Particle Physics	1
1.1.1	Particles and Interactions	2
1.1.2	Perturbation Theory and Renormalization	5
1.1.3	Electroweak Symmetry Breaking	7
1.1.4	Beyond the Standard Model	8
1.2	Proton-Proton Collisions	9
1.2.1	Parton Distribution Functions	9
1.2.2	The Factorization Theorem	10
1.2.3	Underlying Event and Pile-Up	11
1.3	Basic Detector Concepts	11
1.3.1	Tracking Detectors	12
1.3.2	Calorimeters	13
1.4	Simulations Using the Monte Carlo Method	13
	References	14
2	The CMS Experiment at the LHC	17
2.1	The Large Hadron Collider	17
2.1.1	Luminosity and Event Rate	18
2.1.2	Experiments	20
2.2	The Compact Muon Solenoid	20
2.2.1	Tracking Detectors	21
2.2.2	Calorimeters	24
2.2.3	The Solenoid	26
2.2.4	Muon Systems	26
2.2.5	The Trigger and Data Acquisition System	27
2.3	Upgrades to the CMS Experiment	28
2.3.1	The Phase I Upgrades	28
2.3.2	The Phase II Upgrades	29
	References	30

Part I Test Beam Measurements and Data Acquisition for the Phase I Upgrade of the CMS Pixel Detector

3	Basic Concepts of Semiconductor Tracking Detectors	35
3.1	Semiconductor Sensors and Signal Formation	36
3.1.1	Extrinsic Semiconductors	38
3.1.2	The pn -Junction	39
3.1.3	Depletion Voltage, Capacitance, and Leakage Current	40
3.1.4	Implant Segmentation	41
3.1.5	Signal Formation	42
3.2	Front-End Electronics and Detector Readout	44
3.3	Pattern Recognition and Tracking	45
3.3.1	Clustering	46
3.3.2	Trajectory Reconstruction	47
3.4	Detector Alignment	49
3.5	Intrinsic Resolution	50
	References	51
4	The CMS Pixel Detector for Phase I	55
4.1	Sensor Design	56
4.2	The Readout Chip	57
4.2.1	The Pixel Unit Cell	58
4.2.2	The Double Column Periphery	60
4.2.3	The ROC Controller and Interface	61
4.2.4	Header and Pixel Data Format	62
4.3	Detector Modules and the Token Bit Manager	63
4.3.1	TBM Header and Trailer	64
4.4	Detector Geometry and Material Budget	65
4.5	Power Supply, Readout, and Data Links	66
	References	66
5	Simulation of CMS Pixel Detector Modules	69
5.1	Charge Deposition	69
5.2	Charge Transport	71
5.3	Digitization and Reconstruction	72
	References	74
6	The pxar Data Acquisition and Calibration Framework	75
6.1	The Digital Test Board	76
6.1.1	Deserializers and Data Recording	76
6.1.2	The Nios II CPU	77
6.1.3	Trigger Generation	78
6.2	The pxarCore Library	79
6.2.1	The Software Architecture	79
6.2.2	Event Building and Data Decoding	81
6.2.3	Front-End Emulation for System Testing	81

6.3	Phase I Pixel Module Qualification.	82
6.3.1	The Module Pretest	82
6.3.2	The Module Fulltest	83
6.3.3	X-Ray Calibration	87
	References.	88

7.1	The DESY-II Beamlines.	89
7.1.1	Beam Energy Measurement in TB21.	90
7.2	Beam Telescopes	91
7.2.1	Pointing Resolution	93
7.2.2	The DATURA Beam Telescope	94
7.3	The Test Beam Setup	95
7.3.1	DUT Installation	96
7.3.2	Timing Reference	96
7.3.3	Trigger Logic	97
7.4	Data Acquisition.	98
7.4.1	The EUDAQ Data Acquisition Framework	99
7.4.2	Data Quality Monitoring and Correlations.	102
7.4.3	The CMS Pixel DAQ System	103
7.5	Offline Track Reconstruction	104
7.5.1	Job Submission to Computing Clusters	104
7.5.2	Clustering and Hot Pixel Suppression	105
7.5.3	Telescope Alignment.	105
7.5.4	Tracking	107
	References.	108
8	Qualification of the Phase I Readout Chip	111
8.1	Samples and Naming Conventions	112
8.2	Electrical Calibration, Trimming, and Operation Parameters.	113
8.3	Reconstruction	113
8.3.1	Pixel and Cluster Charge Calibration.	114
8.3.2	Charging Effects in the DCol Transmission.	116
8.3.3	Clustering and Cluster Center Interpolation.	117
8.3.4	Even/Odd Effect in the Column Occupancy	118
8.3.5	Track Impact Reconstruction on the DUT.	120
8.3.6	Detector Alignment for DUT and REF	121
8.4	Event Selection.	123
8.4.1	Geometric Constraints on the Sensor.	124
8.4.2	Track Matching and Isolation Criteria	125
8.4.3	Constraints on the Cluster Charge	126
8.5	Statistical and Systematic Uncertainties	127
8.6	Control Distributions	129
8.7	Tracking Efficiency.	130

8.8	Intra-pixel Resolution and Efficiency	132
8.8.1	Charge Collection	133
8.8.2	Tracking Efficiency	134
8.8.3	Intra-pixel Spatial Resolution	135
8.9	Intrinsic Spatial Resolution	137
8.9.1	Resolution as a Function of the Lorentz Angle	138
8.9.2	Resolution as a Function of the Pseudorapidity	139
8.9.3	Resolution as a Function of the Pixel Threshold	141
8.10	Summary	142
	References.	143
9	Improving the Position Resolution Using the Cluster Skewness. . .	145

11.1	Event Generation	170
11.1.1	Matrix Element Simulation	170
11.1.2	The Parton Shower	171
11.1.3	Hadronization and Decay	172
11.1.4	Detector Simulation.	173
11.2	Simulation of $t\bar{t}$ Events	173
11.2.1	Central $t\bar{t}$ Samples from MadGraph.	173
11.2.2	Production of Powheg $t\bar{t}J$ Samples	174
11.3	Simulation of Background Processes	175
	References.	176

12	Object Reconstruction and Event Selection	179
12.1	Trigger Selection	179
12.2	The Particle Flow Algorithm	180
12.3	Primary Vertex Reconstruction	181
12.4	Lepton Reconstruction and Selection	181
12.5	Jet Reconstruction	183
12.5.1	Identification of b Jets	185
12.6	Missing Transverse Energy	185
12.7	Kinematic Reconstruction of the Event Topology	185
12.8	Leading Additional Jet	186
12.9	Summary and Control Distributions	186
	References	190
13	Systematic Uncertainties	193
13.1	Experimental Uncertainties	193
13.2	Modeling Uncertainties	196
13.3	Propagation of Systematic Uncertainties	197
	References	198
14	Measurement of the Top Quark Mass from the ρ_s Distribution of $t\bar{t}$+jet Events	199
14.1	Global χ^2 Template Fit	199
14.1.1	Statistical Uncertainty	203
14.1.2	Systematic Uncertainties	203
14.2	Tests of the Extraction Technique Using Pseudo-Data	204
14.3	Measurement of the Top Quark Mass	205
	References	207
15	Measurement of the Top Quark Mass from Differential $t\bar{t}$+jet Cross Sections	209
15.1	Measurement of the Differential $t\bar{t}$ +jet Cross Section	209
15.1.1	Cross Section Definition	210
15.1.2	Migration and Binning	211
15.1.3	Regularized Unfolding	212
15.1.4	Differential $t\bar{t}$ +jet Production Cross Section as a Function of ρ_S	215
15.2	Global χ^2 Template Fit Including Statistical Correlations	217
15.3	Tests of the Unfolding and Extraction Technique	218
15.4	Determination of the Top Quark Mass	219
15.4.1	Measurement of m_t^{MC} from Differential Cross Sections	219
15.4.2	Measurement of m_t^{pole} from Differential Cross Sections	222
15.5	Summary	228
	References	229

Summary and Prospects	231
Appendix - Part I	235
Appendix A: Photographs	235
Appendix B: Test Beam Analysis: Supplemental Material	241
Appendix C: Cluster Skewness: Supplemental Material	245
Appendix D: Measurements with Phase I Detector Modules	251
Appendix - Part II	257
Appendix E: Powheg Monte Carlo Sample Production	257
Appendix F: Trigger Paths, Event Yield, and Control Distributions . . .	259
Appendix G: Bin Distributions and Local χ^2_i Estimators for the Top Quark Mass Extraction	265
Appendix H: Differential Cross Section: Supplemental Material	269

CMS Pixel Detector Upgrade and Top Quark Pole Mass
Determination
