
Contents

1	Economic and Academic Importance of Radish	1
	Takeshi Nishio	
2	Speciation and Diversification of Radish	11
	Hiroshi Yamagishi	
3	Genetic Maps and Whole Genome Sequences of Radish	31
	Kenta Shirasawa and Hiroyasu Kitashiba	
4	Gene Annotation and Database of the Radish	43
	Hideki Hirakawa	
5	Comparative Analysis of the Radish Genome with <i>Brassica</i> Genomes.	53
	Hee-Ju Yu, Young-Min Jeong and Jeong-Hwan Mun	
6	DNA Polymorphism and Genetic Diversity in <i>Raphanus</i> Accessions	71
	Li Zhang and Qingbiao Wang	
7	Cytoplasmic Male Sterility and Mitochondrial Genome Variations in Radish.	93
	Hiroshi Yamagishi and Toru Terachi	
8	Gene Expression Profiles During Tuberous Root Development	109
	Yuki Mitsui	
9	MicroRNAs Associated with Tuberous Root Development	121
	Yuyan Sun and Xixiang Li	
10	Genetic Profile of Glucosinolate Biosynthesis	137
	Tomohiro Kakizaki and Masahiko Ishida	
11	Genes for Bolting and Flowering	151
	Hiroyasu Kitashiba and Shuji Yokoi	
12	Molecular Mapping of Disease Resistance Genes	165
	Xiaona Yu, Su Ryun Choi and Yong Pyo Lim	
13	Polymorphism of Self-Incompatibility Genes	177
	Takeshi Nishio and Koji Sakamoto	

14	The Use of Genome Information for Intergeneric Hybridization Breeding	189
	Sang Woo Bang, Katsunori Hatakeyama and Yoshihito Takahata	
15	F₁ Hybrid Breeding Using Genome Information.	199
	Satoshi Niikura	
	Index	217

The Radish Genome

Nishio, T.; Kitashiba, H. (Eds.)

2017, XVI, 220 p. 91 illus., 81 illus. in color., Hardcover

ISBN: 978-3-319-59252-7
