

Contents

1	Thermocatalytic Conversion of CO₂	1
1.1	Motivation and General Background	2
1.2	Conversion Pathways and Major Challenges	3
1.3	Catalysis and Catalyst Deactivation	5
1.4	Reactor and System Design	10
1.5	Methane Dry Reforming	14
1.6	Methanol Synthesis via CO ₂ Hydrogenation	16
1.7	Reverse Water Gas Shift Reaction	17
1.8	Sabatier Reaction, Power-to-Gas and Renewable Natural Gas	18
1.9	Future Perspectives	22
	References	24
2	Electrocatalytic Reduction of CO₂	27
2.1	Basics of Electrochemical Reduction of CO ₂	28
2.2	Fundamental Challenges	31
2.3	Catalysis for Electrochemical Reduction of CO ₂	33
2.4	Electrochemical Cell Design	36
2.5	Methanol Synthesis	38
2.6	Syngas Production in Solid Oxide Fuel Cells	40
2.7	Concluding Remarks	41
	References	42
3	Photocatalytic Reduction of CO₂	43
3.1	Basic Principles	44
3.2	Main Drawbacks	46
3.3	Photocatalysis for CO ₂ Conversion	47
3.4	Photochemical Reactor Design	50
3.5	Operational Constraints and Feasibility of Practical Operations	53
	References	54

4 Biological Conversion of CO₂	55
4.1 Biological Fixation of CO ₂ Using Microorganisms	56
4.2 Synthetic Biology	58
4.3 Biological Electrofuels	59
4.4 Biological Hydrogenation of CO ₂	61
4.5 Challenges and Opportunities	63
References	65
Closing Remarks	67
Index	69

Renewable Synthetic Fuels and Chemicals from Carbon
Dioxide

Fundamentals, Catalysis, Design Considerations and
Technological Challenges

Simakov, D.S.A.

2017, VIII, 69 p. 35 illus., 22 illus. in color., Softcover

ISBN: 978-3-319-61111-2
