

Contents

1	Biological Models	1
1.1	Introduction	1
1.2	Birth-Death Processes	2
1.3	Grasshopper and Kangaroo Movement	3
1.4	Velocity Jump Process	4
1.5	Size of Cells in a Single Line	5
1.6	Two-Phase Cell Cycle Model	7
1.7	Stochastic Billiard as a Cell Cycle Model	9
1.8	Stochastic Gene Expression I	11
1.9	Stochastic Gene Expression II	13
1.10	Gene Regulatory Models with Bursting	16
1.11	Neural Activity	17
1.12	Processes with Extra Jumps on a Subspace	19
1.13	Size-Structured Population Model	21
1.14	Age-Structured Population Model	24
1.15	Asexual Phenotype Population Model	25
1.16	Phenotype Model with a Sexual Reproduction	26
1.17	Coagulation-Fragmentation Process in a Phytoplankton Model	28
1.18	Paralog Families	29
1.19	Definition of PDMP	30
2	Markov Processes	33
2.1	Transition Probabilities and Kernels	33
2.1.1	Basic Concepts	33
2.1.2	Transition Operators	36
2.1.3	Substochastic and Stochastic Operators	38
2.1.4	Integral Stochastic Operators	39
2.1.5	Frobenius–Perron Operator	41
2.1.6	Iterated Function Systems	42

2.2	Discrete-Time Markov Processes	44
2.2.1	Markov Processes and Transition Probabilities	44
2.2.2	Random Mapping Representations	46
2.2.3	Canonical Processes	47
2.3	Continuous-Time Markov Processes	49
2.3.1	Basic Definitions	49
2.3.2	Processes with Stationary and Independent Increments	51
2.3.3	Markov Jump-Type Processes	52
2.3.4	Generators and Martingales	54
2.3.5	Existence of PDMPs	56
2.3.6	Transition Functions and Generators of PDMPs	59
3	Operator Semigroups	63
3.1	Generators and Semigroups	63
3.1.1	Essentials of Banach Spaces and Operators	63
3.1.2	Definitions and Basic Properties	65
3.1.3	The Resolvent	67
3.2	Basic Examples of Semigroups	69
3.2.1	Uniformly Continuous Semigroups	69
3.2.2	Multiplication Semigroups	70
3.2.3	Translation Semigroups	71
3.3	Generators of Contraction Semigroups	73
3.3.1	The Hille–Yosida Theorem	73
3.3.2	The Lumer–Phillips Theorem	76
3.3.3	Perturbations of Semigroups	78
3.3.4	Perturbing Boundary Conditions	80
4	Stochastic Semigroups	83
4.1	Aspects of Positivity	83
4.1.1	Positive Operators	83
4.1.2	Substochastic Semigroups	84
4.1.3	Resolvent Positive Operators	86
4.1.4	Generation Theorems	87
4.1.5	Positive Perturbations	88
4.1.6	Positive Unbounded Perturbations	91
4.1.7	Adjoint and Transition Semigroups	94
4.2	Stochastic Semigroups for PDMPs	96
4.2.1	Jump-Type Markov Processes	96
4.2.2	Semigroups for Semiflows	99
4.2.3	PDMPs Without Boundaries	101
4.2.4	Dynamical Systems with Jumps	103
4.2.5	Randomly Switched Dynamical Systems	104

4.2.6	Jumps from Boundaries.	106
4.2.7	Semigroups for the Stein Model	109
5	Asymptotic Properties of Stochastic Semigroups—General	
	Results	115
5.1	Asymptotic Stability and Sweeping	115
5.1.1	Definitions of Asymptotic Stability and Sweeping	115
5.1.2	Lower Function Theorem	116
5.1.3	Partially Integral Semigroups and Asymptotic Stability.	117
5.1.4	Sweeping via the Existence of σ -finite Invariant Function	118
5.2	Asymptotic Decomposition of Stochastic Semigroups	120
5.2.1	Theorem on Asymptotic Decomposition	120
5.2.2	Sweeping and the Foguel Alternative	122
5.2.3	Asymptotic Stability	124
5.2.4	Hasminskiĭ Function	125
6	Asymptotic Properties of Stochastic Semigroups—Applications	129
6.1	Continuous-Time Markov Chains.	129
6.1.1	Foguel Alternative.	129
6.1.2	Non-explosive Markov Chains and Asymptotic Stability.	130
6.1.3	Markov Chain with an Absorbing State	131
6.1.4	Asymptotics of Paralog Families.	132
6.1.5	Applications to Pure Jump-Type Markov Processes	133
6.2	Dynamical Systems with Random Switching	135
6.2.1	General Formulation	135
6.2.2	Applications to Stochastic Gene Expression Models	137
6.3	Cell Maturation Models	140
6.3.1	Introductory Remarks	140
6.3.2	Flows with Jumps	141
6.3.3	Size-Structured Model.	142
6.3.4	Two-Phase Cell Cycle Model	144
6.3.5	Lebowitz–Rubinow’s Model	146
6.3.6	Stein’s Model	147
	Appendix A: Measure and Probability Essentials.	149
	References	159
	Index	165

Piecewise Deterministic Processes in Biological Models

Rudnicki, R.; Tyran-Kamińska, M.

2017, IX, 169 p. 10 illus., Softcover

ISBN: 978-3-319-61293-5
