

CONTENTS

Preface	ix
Notation	xiii
Chapter I. Basic facts	1
§ 1. Random variables	1
§ 2. Conditional expectations	8
§ 3. Stochastic processes. Continuity criterion	18
§ 4. Stopping times	24
§ 5. Martingales	27
§ 6. Markov processes	43
§ 7. Processes with independent increments	51
§ 8. Gaussian processes	56
§ 9. Stationary processes	59
§10. Brownian motion process	64
§11. Brownian bridge	76
Chapter II. Stochastic calculus	85
§ 1. Stochastic integration with respect to Brownian motion	85
§ 2. Stochastic integrals with variable upper limit	89
§ 3. Extension of the class of integrands	94
§ 4. Itô's formula	97
§ 5. Brownian local time. Tanaka's formula	111
§ 6. Stochastic exponent	121
§ 7. Stochastic differential equations	129
§ 8. Methods of solving of stochastic differential equations	143
§ 9. Dependence of solutions of stochastic differential equations on initial values	153
§10. Girsanov's transformation	163
§11. Probabilistic solution of the Cauchy problem	171
§12. Ordinary differential equations, probabilistic approach	176
§13. The Cauchy problem, existence of a solution	190
Chapter III. Distributions of functionals of Brownian motion	197
§ 1. Distributions of integral functionals of Brownian motion	197
§ 2. Distributions of integral functionals of Brownian motion and of infimum and supremum functionals	206

§ 3. Distributions of functionals of Brownian motion and local times	212
§ 4. Distributions of functionals of Brownian bridge	218
§ 5. Distributions of functionals of Brownian motion stopped at the first exit time	231
§ 6. Distributions of functionals of Brownian motion stopped at the moment inverse of integral functional	241
§ 7. Distributions of functionals of Brownian motion stopped at the inverse local time	249
§ 8. Distributions of functionals of Brownian motion stopped at the inverse range time	254
§ 9. Distributions of functionals of Brownian motion with linear drift	258
§10. Distributions of functionals of reflected Brownian motion	263
 Chapter IV. Diffusion processes	 267
§ 1. Diffusion processes	267
§ 2. Backward and forward Kolmogorov equations	269
§ 3. Diffusions as solutions of stochastic differential equations	273
§ 4. Distributions of integral functionals of a diffusion and of infimum and supremum functionals	279
§ 5. Distributions of functionals of a diffusion stopped at the moment inverse of integral functional	284
§ 6. Distributions of functionals of diffusion bridges	287
§ 7. Distributions of integral functionals of a diffusion at the first exit time	291
§ 8. Distributions of functionals of a diffusion connected with location of maximum or minimum	294
§ 9. Semigroup of operators related to diffusion	307
§10. Transition density of a homogeneous diffusion	312
§11. Main characteristics of a homogeneous diffusion	317
§12. Recurrence and explosion criteria for a homogeneous diffusion	319
§13. Random time change	325
§14. Diffusion local time	328
§15. Boundary classification for regular diffusion	330
§16. Special diffusions	335
§17. Homogeneous diffusions with identical bridges	354

Chapter V. Brownian local time 359

§ 1. Brownian local time	359
§ 2. Markov property of Brownian local time stopped at an exponential moment	366
§ 3. Markov property of Brownian local time stopped at the first exit time	378
§ 4. Markov property of Brownian local time stopped at the inverse local time	386
§ 5. Distributions of functionals of Brownian local time stopped at an exponential moment	394
§ 6. Distributions of functionals of Brownian local time stopped at the first exit time and at the inverse local time	403
§ 7. Distributions of functionals of sojourn time type	410
§ 8. Distribution of supremum of Brownian local time increments	421
§ 9. The law of the iterated logarithm for Brownian local time	427
§10. The exact modulus of continuity of the Brownian local time $\ell(t, x)$ with respect to t	429
§11. The exact modulus of continuity of the Brownian local time $\ell(t, x)$ with respect to x	432

Chapter VI. Diffusions with jumps 439

§ 1. Diffusions with jumps	439
§ 2. Examples of diffusions with jumps	445
§ 3. Distributions of integral functionals of a diffusion with jumps and of infimum and supremum functionals	447
§ 4. Expectation of integral with respect to a counting process	453
§ 5. Distributions of functionals of diffusion with jumps bridges	455
§ 6. Distributions of integral functionals of a diffusion with jumps stopped at the first exit time	460
§ 7. Distributions of functionals of a diffusion with jumps stopped at the moment inverse of integral functional	467
§ 8. Random time change	471
§ 9. Transformation of measure	474
§10. Transition density of Brownian motion with jumps	478
§11. Distributions of infimum or supremum of Brownian motion with linear drift with jumps	483
§12. Examples for the first exit time	487
§13. Distribution of local time of Brownian motion with jumps	496

Chapter VII. Invariance principle for random walks and local times	501
§ 1. Formulation of problems	501
§ 2. The Skorohod embedding scheme	503
§ 3. Invariance principle for random walks	507
§ 4. Estimates for distributions of maximum of sums of random variables	514
§ 5. Auxiliary results	517
§ 6. Weak invariance principle for local times (integer random walk)	524
§ 7. Weak invariance principle for local times (continuous random walk)	544
§ 8. Strong invariance principle for local times	559
§ 9. Applications of invariance principle	572
 Appendix 1. Heat transfer problem	 583
 Appendix 2. Special functions	 593
 Appendix 3. Inverse Laplace transforms	 603
 Appendix 4. Differential equations and their solutions	 606
 Appendix 5. Examples of transformations of measures associated with diffusion processes	 613
 Appendix 6. n-fold differentiation formulas	 614
 Bibliography	 615
 Subject index	 623
