

Contents

1	Introduction Ill-Posedness of Inverse Problems for Differential and Integral Equations	1
1.1	Some Basic Definitions and Examples	1
1.2	Continuity with Respect to Coefficients and Source: Sturm-Liouville Equation	9
1.3	Why a Fredholm Integral Equation of the First Kind Is an Ill-Posed Problem?	13
 Part I Introduction to Inverse Problems		
2	Functional Analysis Background of Ill-Posed Problems	23
2.1	Best Approximation and Orthogonal Projection	24
2.2	Range and Null-Space of Adjoint Operators	31
2.3	Moore-Penrose Generalized Inverse	33
2.4	Singular Value Decomposition	38
2.5	Regularization Strategy. Tikhonov Regularization	45
2.6	Morozov's Discrepancy Principle	58
3	Inverse Source Problems with Final Overdetermination	63
3.1	Inverse Source Problem for Heat Equation	64
3.1.1	Compactness of Input-Output Operator and Fréchet Gradient	67
3.1.2	Singular Value Decomposition of Input-Output Operator	72
3.1.3	Picard Criterion and Regularity of Input/Output Data	79
3.1.4	The Regularization Strategy by SVD. Truncated SVD	84
3.2	Inverse Source Problems for Wave Equation	90
3.2.1	Non-uniqueness of a Solution	93
3.3	Backward Parabolic Problem	96

3.4	Computational Issues in Inverse Source Problems	104
3.4.1	Galerkin FEM for Numerical Solution of Forward Problems	105
3.4.2	The Conjugate Gradient Algorithm	107
3.4.3	Convergence of Gradient Algorithms for Functionals with Lipschitz Continuous Fréchet Gradient	112
3.4.4	Numerical Examples	116

Part II Inverse Problems for Differential Equations

4	Inverse Problems for Hyperbolic Equations	123
4.1	Inverse Source Problems	123
4.1.1	Recovering a Time Dependent Function	124
4.1.2	Recovering a Spacewise Dependent Function	126
4.2	Problem of Recovering the Potential for the String Equation	128
4.2.1	Some Properties of the Direct Problem	129
4.2.2	Existence of the Local Solution to the Inverse Problem	133
4.2.3	Global Stability and Uniqueness	138
4.3	Inverse Coefficient Problems for Layered Media	141
5	One-Dimensional Inverse Problems for Electrodynamic Equations	145
5.1	Formulation of Inverse Electrodynamic Problems	145
5.2	The Direct Problem: Existence and Uniqueness of a Solution	146
5.3	One-Dimensional Inverse Problems	155
5.3.1	Problem of Finding a Permittivity Coefficient	155
5.3.2	Problem of Finding a Conductivity Coefficient	160
6	Inverse Problems for Parabolic Equations	163
6.1	Relationships Between Solutions of Direct Problems for Parabolic and Hyperbolic Equations	163
6.2	Problem of Recovering the Potential for Heat Equation	166
6.3	Uniqueness Theorems for Inverse Problems Related to Parabolic Equations	168
6.4	Relationship Between the Inverse Problem and Inverse Spectral Problems for Sturm-Liouville Operator	171
6.5	Identification of a Leading Coefficient in Heat Equation: Dirichlet Type Measured Output	174
6.5.1	Some Properties of the Direct Problem Solution	175
6.5.2	Compactness and Lipschitz Continuity of the Input-Output Operator. Regularization	177
6.5.3	Integral Relationship and Gradient Formula	183
6.5.4	Reconstruction of an Unknown Coefficient	186

6.6	Identification of a Leading Coefficient in Heat Equation: Neumann Type Measured Output	191
6.6.1	Compactness of the Input-Output Operator	193
6.6.2	Lipschitz Continuity of the Input-Output Operator and Solvability of the Inverse Problem	197
6.6.3	Integral Relationship and Gradient Formula	200
7	Inverse Problems for Elliptic Equations	205
7.1	The Inverse Scattering Problem at a Fixed Energy	205
7.2	The Inverse Scattering Problem with Point Sources	208
7.3	Dirichlet to Neumann Map	213
8	Inverse Problems for the Stationary Transport Equations.	219
8.1	The Transport Equation Without Scattering	219
8.2	Uniqueness and a Stability Estimate in the Tomography Problem	222
8.3	Inversion Formula.	223
9	The Inverse Kinematic Problem.	227
9.1	The Problem Formulation.	227
9.2	Rays and Fronts	228
9.3	The One-Dimensional Problem.	231
9.4	The Two-Dimensional Problem	234
	Appendix A: Invertibility of Linear Operators	239
	Appendix B: Some Estimates For One-Dimensional Parabolic Equation	247
	References	253
	Index	259

Introduction to Inverse Problems for Differential
Equations

Hasanov Hasanoğlu, A.; Romanov, V.G.

2017, XIII, 261 p. 4 illus., Hardcover

ISBN: 978-3-319-62796-0
