

Contents

1	Introduction	1
1.1	Simulation Approaches for Biochemical Reactions	3
1.2	Further Reading	5
2	Stochastic Simulation of Biochemical Reaction Systems	7
2.1	Stochastic Chemical Kinetics	7
2.1.1	Biochemical Reactions	7
2.1.2	Reaction Propensity	11
2.1.3	Chemical Master Equation	13
2.2	Stochastic Simulation	16
2.3	Simulation Output Analysis	20
2.3.1	Confidence Interval Estimation	20
2.3.2	Probability Distribution Estimation	22
2.3.3	Illustrative Examples	22
2.4	Summary	27
2.5	Further Reading	27
3	Implementations of the Stochastic Simulation Algorithm	29
3.1	Direct Method	31
3.1.1	Enhanced Direct Method	34
3.2	Improvements for Direct Method	37
3.2.1	Direct Method with Sorted Reactions	38
3.2.2	Direct Method with Multi-level Search	43
3.2.3	Direct Method with Tree-Based Search	45
3.2.4	Direct Method with Composition-Rejection Search	55
3.3	Partial-Propensity Direct Method	58
3.3.1	PDM with Composition-Rejection Search	66
3.4	Benchmark of DM and Its Derived Algorithms	68
3.5	First Reaction Method	71
3.5.1	First Family Method	74
3.6	Next Reaction Method	75

3.6.1	Modified Next Reaction Method	81
3.7	Benchmark of FRM and Its Derived Algorithms	85
3.8	Rejection-Based SSA	87
3.8.1	Simultaneous RSSA	95
3.9	Improvements for RSSA	96
3.9.1	RSSA with Tree-Based Search	96
3.9.2	RSSA with Composition-Rejection Search	99
3.9.3	RSSA with Table-Lookup Search	101
3.10	Benchmark of RSSA and Its Derived Algorithms	104
3.11	Summary	108
3.12	Further Reading	111
4	Approximate Simulation of Biochemical Reaction Systems	113
4.1	Probability-Weighted Dynamic Monte Carlo Method	115
4.2	Bounded Acceptance Probability RSSA	118
4.3	τ -Leaping Method	122
4.3.1	Leap Selection	125
4.3.2	Avoiding the Negative Population Problem	131
4.3.3	Switching to Exact Simulation	131
4.3.4	The τ -Leaping Algorithm	132
4.4	Improvements for τ -Leaping	133
4.4.1	Modified τ -Leaping	133
4.4.2	Binomial τ -Leaping	137
4.4.3	Implicit τ -Leaping	138
4.5	k_α -Leaping Method	140
4.5.1	K-Leaping Method	142
4.6	Benchmark of Approximate Stochastic Algorithms	144
4.7	Chemical Langevin Method	147
4.8	Deterministic Simulation	148
4.8.1	From Biochemical Reactions to ODEs	150
4.8.2	Numerical Solution of ODEs	155
4.8.3	Improving the Accuracy of Numerical Methods	158
4.8.4	Multistep Methods	164
4.8.5	Adaptive Methods	168
4.8.6	Issues of Deterministic Simulation	174
4.9	Summary	178
4.10	Further Reading	178
5	Hybrid Simulation Algorithms	181
5.1	Motivation	181
5.2	Reaction-Based System Partitioning	184
5.3	Synchronization of Exact and Approximate Simulations	187
5.4	Hybrid Rejection-Based SSA (HRSSA)	191
5.4.1	Correctness of the Simulation of Slow Reactions	195
5.5	Hybrid Simulation with Stiffness	197

5.5.1	Formulation of Reactions with Stiffness	198
5.5.2	Slow-Scale Stochastic Simulation Algorithm	202
5.5.3	Nested Stochastic Simulation Algorithm	204
5.6	Summary	204
5.7	Further Reading	205
A	Benchmark Models	207
A.1	Birth Process Model	207
A.2	Fast Isomerization Model	207
A.3	Oscillator Model	208
A.4	Schlögl Model	208
A.5	Oregonator Model	209
A.6	Gene Expression Model	210
A.7	Folate Cycle Model	211
A.8	MAPK Cascade Model	212
A.9	FcεRI Pathway Model	213
A.10	B Cell Antigen Receptor Signaling Model	214
A.11	Linear Chain Model	214
B	Random Number Generation	217
B.1	Uniform Random Number Generator	217
B.2	Non-uniform Random Number Generator	218
B.2.1	General Techniques	218
B.2.2	Exponential Distribution	220
B.2.3	Erlang Distribution	220
B.2.4	Normal Distribution	221
B.2.5	Discrete Distribution with Given Probability Vector	222
B.2.6	Poisson Distribution	222
B.2.7	Binomial Distribution	223
B.2.8	Multinomial Distribution	224
