

Contents

1	Introduction	1
1.1	The Roots of Plasma Physics	2
1.2	The Plasma Environment of Our Earth	4
1.2.1	The Energy Source of Stars	4
1.2.2	The Active Sun	5
1.2.3	The Solar Wind	7
1.2.4	Earth's Magnetosphere and Ionosphere	8
1.3	Gas Discharges	12
1.3.1	Lighting	13
1.3.2	Plasma Displays	15
1.4	Dusty Plasmas	16
1.5	Controlled Nuclear Fusion	17
1.5.1	A Particle Accelerator Makes No Fusion Reactor	19
1.5.2	Magnetic Confinement in Tokamaks	20
1.5.3	Experiments with D–T Mixtures	21
1.5.4	The International Thermonuclear Experimental Reactor	21
1.5.5	Stellarators	23
1.5.6	Inertial Confinement Fusion	24
1.6	Challenges of Plasma Physics	26
1.7	Outline of the Book	27
2	Definition of the Plasma State	29
2.1	States of Matter	29
2.1.1	The Boltzmann Distribution	31
2.1.2	The Saha Equation	32
2.1.3	The Coupling Parameter	34
2.2	Collective Behavior of a Plasma	35
2.2.1	Debye Shielding	35
2.2.2	Quasineutrality	40

2.2.3	Response Time and Plasma Frequency	40
2.3	Existence Regimes	41
2.3.1	Strong-Coupling Limit.	41
2.3.2	Quantum Effects	43
3	Single Particle Motion in Electric and Magnetic Fields	45
3.1	Motion in Static Electric and Magnetic Fields	45
3.1.1	Basic Equations.	45
3.1.2	Cyclotron Frequencies.	46
3.1.3	The Earth Magnetic Field	47
3.1.4	$E \times B$ Drift	48
3.1.5	Gravitational Drift	49
3.1.6	Application: Confinement of Nonneutral Plasmas	50
3.2	The Drift Approximation	51
3.2.1	The Concept of a Guiding Center	51
3.2.2	Gradient Drift	52
3.2.3	Curvature Drift	53
3.2.4	The Toroidal Drift.	53
3.3	The Magnetic Mirror	55
3.3.1	Longitudinal Gradient	55
3.3.2	Magnetic Moment	56
3.4	Adiabatic Invariants	57
3.4.1	The Magnetic Moment as First Invariant.	57
3.4.2	The Mirror Effect	58
3.4.3	The Longitudinal and the Flux Invariant.	60
3.5	Time-Varying Fields.	61
3.5.1	The Polarization Drift	61
3.5.2	Time-Varying Magnetic Field	62
3.6	Toroidal Magnetic Confinement	63
3.6.1	The Tokamak Principle	64
3.6.2	The Stellarator Principle	65
3.6.3	Rotational Transform.	65
3.7	Electron Motion in an Inhomogeneous Oscillating Electric Field	68
3.7.1	The Ponderomotive Force	68
4	Stochastic Processes in a Plasma	73
4.1	The Velocity Distribution	73
4.1.1	The Maxwell Velocity Distribution in One Dimension	73
4.1.2	The Maxwell Distribution of Speeds	75
4.1.3	Moments of the Distribution Function.	75
4.1.4	Distribution of Particle Energies	76
4.2	Collisions	77

4.2.1	Cross-Section	77
4.2.2	Mean Free Path and Collision Frequency	79
4.2.3	Rate Coefficients	80
4.2.4	Inelastic Collisions	81
4.2.5	Coulomb Collisions	82
4.3	Transport	83
4.3.1	Mobility and Drift Velocity	83
4.3.2	Electrical Conductivity	85
4.3.3	Diffusion	85
4.3.4	Motion in Magnetic Fields in the Presence of Collisions	95
4.3.5	Application: Cross-Field Motion in a Hall Ion Thruster	98
4.4	Heat Balance of Plasmas	100
4.4.1	Electron Heating in a Gas Discharge	100
4.4.2	Ignition of a Fusion Reaction: The Lawson Criterion	102
4.4.3	Inertial Confinement Fusion	107
5	Fluid Models	113
5.1	The Two-Fluid Model	113
5.1.1	Maxwell's Equations	114
5.1.2	The Concept of a Fluid Description	115
5.1.3	The Continuity Equation	117
5.1.4	Momentum Transport	118
5.1.5	Shear Flows	120
5.2	Magnetohydrostatics	122
5.2.1	Isobaric Surfaces	123
5.2.2	Magnetic Pressure	124
5.2.3	Diamagnetic Drift	125
5.3	Magnetohydrodynamics	127
5.3.1	The Generalized Ohm's Law	128
5.3.2	Diffusion of a Magnetic Field	128
5.3.3	The Frozen-In Magnetic Flux	130
5.3.4	The Pinch Effect	131
5.3.5	Application: Alfvén Waves	132
5.3.6	Application: The Parker Spiral	135
6	Plasma Waves	139
6.1	Maxwell's Equations and the Wave Equation	140
6.1.1	Basic Concepts	140
6.1.2	Fourier Representation	141
6.1.3	Dielectric or Conducting Media	142
6.1.4	Phase Velocity	143

6.1.5	Wave Packet and Group Velocity	143
6.1.6	Refractive Index	145
6.2	The General Dispersion Relation	145
6.3	Waves in Unmagnetized Plasmas	146
6.3.1	Electromagnetic Waves	147
6.3.2	The Influence of Collisions	149
6.4	Interferometry with Microwaves and Lasers	151
6.4.1	Mach–Zehnder Interferometer	152
6.4.2	Folded Michelson Interferometer	154
6.4.3	The Second-Harmonic Interferometer	155
6.4.4	Plasma-Filled Microwave Cavities	156
6.5	Electrostatic Waves	157
6.5.1	The Longitudinal Mode	158
6.5.2	Bohm–Gross Waves	158
6.5.3	Ion-Acoustic Waves	159
6.6	Waves in Magnetized Plasmas	162
6.6.1	The Dielectric Tensor	162
6.6.2	Circularly Polarized Modes and the Faraday Effect	164
6.6.3	Propagation Across the Magnetic Field	169
6.7	Resonance Cones	171
7	Plasma Boundaries	175
7.1	The Space-Charge Sheath	175
7.2	The Child–Langmuir Law	176
7.3	The Bohm Criterion	178
7.3.1	The Pseudopotential	179
7.3.2	The Bohm Criterion Imposed by the Sheath	180
7.3.3	The Bohm Criterion as Seen from the Presheath	181
7.4	Application: Ion Extraction from Plasmas	182
7.5	Double Layers	184
7.5.1	Langmuir’s Strong Double Layer	185
7.5.2	Experimental Evidence of Double Layers	187
7.6	The Plane Langmuir Probe	188
7.6.1	The Ion Saturation Current	191
7.6.2	The Electron Saturation Current	191
7.6.3	The Electron Retardation Current	192
7.6.4	The Floating Potential	194
7.7	Advanced Langmuir Probe Methods	194
7.7.1	The Druyvesteyn Method	194
7.7.2	A Practical Realization of the Druyvesteyn Technique	196
7.7.3	Double Probes	197
7.7.4	Triple Probes	198
7.7.5	Direct Reading Temperature Probe	200

7.7.6	Probe Measurements in Radio-Frequency Discharges	202
7.7.7	Orbital Motion About Cylindrical and Spherical Probes	205
7.7.8	Concluding Remarks	208
8	Instabilities	211
8.1	Beam-Plasma Instability	212
8.1.1	Non-thermal Distribution Functions	213
8.1.2	Dispersion of the Beam-Plasma Modes	214
8.1.3	Growth Rate for a Weak Beam	216
8.1.4	Why Is the Slow Space-Charge Wave Unstable?	217
8.1.5	Temporal or Spatial Growth	219
8.2	Buneman Instability	220
8.2.1	Dielectric Function	220
8.2.2	Instability Analysis	221
8.3	Beam Instability in Finite Systems	222
8.3.1	Geometry of the Pierce Diode	222
8.3.2	The Dispersion Relation for a Free Electron Beam . . .	223
8.3.3	The Influence of the Boundaries	223
8.3.4	The Pierce Modes	225
8.3.5	Discussion of the Pierce Model	226
8.4	Macroscopic Instabilities	228
8.4.1	Stable Magnetic Configurations	228
8.4.2	Pinch Instabilities	229
8.4.3	Rayleigh–Taylor Instability	230
9	Kinetic Description of Plasmas	235
9.1	The Vlasov Model	236
9.1.1	Heuristic Derivation of the Vlasov Equation	236
9.1.2	The Vlasov Equation	238
9.1.3	Properties of the Vlasov Equation	240
9.1.4	Relation Between the Vlasov Equation and Fluid Models	240
9.2	Application to Current Flow in Diodes	242
9.2.1	Construction of the Distribution Function	243
9.2.2	Virtual Cathode and Current Continuity	244
9.2.3	Finding a Self-Consistent Solution	245
9.2.4	Discussion of Numerical Solutions	247
9.3	Kinetic Effects in Electrostatic Waves	248
9.3.1	Electrostatic Electron Waves	248
9.3.2	The Meaning of Cold, Warm and Hot Plasma	249
9.3.3	Landau Damping	251
9.3.4	Damping of Ion-Acoustic Waves	254

9.3.5	A Physical Picture of Landau Damping.	256
9.3.6	Plasma Wave Echoes.	261
9.3.7	No Simple Route to Landau Damping.	262
9.4	Plasma Simulation with Particle Codes.	263
9.4.1	The Particle-in-Cell Algorithm	264
9.4.2	Phase-Space Representation.	265
9.4.3	Instability Saturation by Trapping	267
9.4.4	Current Flow in Bounded Plasmas	269
10	Dusty Plasmas	275
10.1	Charging of Dust Particles	276
10.1.1	Secondary Emission	277
10.1.2	Photoemission	278
10.1.3	Charge Collection	282
10.1.4	Charging Time	287
10.1.5	Charge Fluctuations.	290
10.1.6	Influence of Dust Density on Dust Charge	291
10.2	Forces on Dust Particles	295
10.2.1	Levitation and Confinement.	296
10.2.2	Neutral Drag Force	304
10.2.3	Thermophoretic Force	305
10.2.4	Ion Wind Forces	306
10.2.5	Interparticle Forces	313
10.3	Plasma Crystals	317
10.3.1	Monolayers and Multilayers	317
10.3.2	Phase Transitions of Bilayers and Multilayers.	318
10.3.3	Laser Heating of Monolayers	319
10.3.4	Pair Correlation Function.	320
10.4	Yukawa Balls	322
10.4.1	Coulomb Balls.	324
10.4.2	Potential and Electric Field of Yukawa Spheres	326
10.4.3	The Density Profile of a Yukawa Ball in a Parabolic Trap	329
10.4.4	Shell Formation During Cooling of a Yukawa Ball.	331
10.4.5	Eigenmodes of a Yukawa Ball	332
10.4.6	Coulomb and Yukawa Explosions.	334
10.5	Waves in Dusty Plasmas.	336
10.5.1	Compressional and Shear Waves in Monolayers	336
10.5.2	Spectral Energy Density of Waves	348
10.5.3	Dust Density Waves	349
10.6	Attractive Forces Between Like-Charged Particles	351
10.6.1	Theories of Ion Wake Potentials	352
10.6.2	Experiments on Wakefield Attraction	354

10.6.3	Non-reciprocity of the Attractive Force	355
10.6.4	Instabilities Resulting from Ion Wakes	358
10.7	Concluding Remarks.	362
11	Plasma Generation	365
11.1	DC-Discharges	365
11.1.1	Types of Low Pressure Discharges	366
11.1.2	Regions in a Glow Discharge	367
11.1.3	Processes in the Cathode Region.	368
11.1.4	The Hollow Cathode Effect.	371
11.1.5	Thermionic Emitters	372
11.1.6	The Negative Glow	373
11.1.7	The Positive Column.	374
11.1.8	Similarity Laws	376
11.1.9	Discharge Modes of Thermionic Discharges	377
11.2	Capacitive Radio-Frequency Discharges	378
11.2.1	The Impedance of the Bulk Plasma.	379
11.2.2	Sheath Expansion	380
11.2.3	Electron Energetics	383
11.2.4	Self Bias	385
11.2.5	Application: Anisotropic Etching of Silicon	388
11.2.6	The Electrical Asymmetry Effect.	388
11.3	Inductively Coupled Plasmas	391
11.3.1	The Skin Effect	391
11.3.2	E and H-Mode.	393
11.3.3	The Equivalent Circuit for an ICP.	394
11.3.4	Applications of ICPs	395
11.4	Magnetron Discharges for Thin Film Deposition	395
11.4.1	Cathode Sputtering in Low-Pressure Discharges	396
11.4.2	The DC Sputter Magnetron	398
11.4.3	High-Power Impulse Magnetron Sputtering.	400
11.4.4	I-PVD Applications in Integrated Circuit Manufacturing	407
	Appendix: Constants and Formulas.	411
	Solutions to Problems	417
	Glossary.	433
	References	441
	Author Index.	453
	Subject Index.	455

Plasma Physics

An Introduction to Laboratory, Space, and Fusion

Plasmas

Piel, A.

2017, XX, 463 p. 268 illus., 39 illus. in color., Hardcover

ISBN: 978-3-319-63425-8
