

Contents

1 Overview	1
References	6
 Part I Numerical Algorithms and Software for Time-Resolved Quantum Transport	
2 Introduction to Quantum Transport in the Time Domain	9
2.1 Mesoscopic Quantum Electronics	9
2.2 Experiments in the Time Domain	12
2.3 Theoretical Description of Quantum Circuits	16
2.3.1 A General Model for Quantum Circuits	16
2.3.2 Non-equilibrium Green's Function Techniques	18
2.3.3 Wavefunction Techniques	19
References	23
3 Numerical Algorithms for Time-Resolved Quantum Transport	27
3.1 A High-Level Overview of the Algorithm	27
3.1.1 A Note on Bound States	29
3.1.2 Algorithm Overview	30
3.2 Computing the Stationary Scattering States	31
3.2.1 Calculation of the Lead Transverse Modes	31
3.2.2 A Closed Set of Equations for the Scattering States	32
3.3 The Source-Sink Algorithm	33
3.3.1 The Source	33
3.3.2 The Sink	34
3.3.3 Analytical Calculation of the Spurious Reflection	36
3.3.4 Numerical Precision in the Time Domain	39
3.3.5 Additional Ingredients for a Robust Algorithm	42
3.3.6 A Note on Timestepping Algorithms	43

3.4	Integrating the Observables.	44
	References.	47
4	Software Design.	51
4.1	Requirements for Well Designed Scientific Software	51
4.1.1	KWANT: An Example of Well Designed Scientific Software	53
4.2	TKWANT: Time-Dependent Extensions to KWANT	55
4.2.1	Modifications to the Problem Definition Stage	56
4.2.2	Modifications to the Finalisation Stage	56
4.2.3	Modifications to the Solving Stage	57
4.3	TKWANT Usage in the Field: A Gallery of Examples	58
4.3.1	Calculating Time-Resolved Shot Noise	58
4.3.2	Stopping Voltage Pulses in the Quantum Hall Regime	60
4.3.3	a.c. Josephson Effect Without Superconductivity	62
4.3.4	Floquet Topological Insulators	63
	References.	65
Part II Applications of the Numerical Algorithms		
5	Split Wire Flying Qubit	69
5.1	Simple Model for the Split Wire Geometry	69
5.2	d.c Characterization of the Split Wire.	71
5.2.1	Analytical Treatment Using Scattering Theory	72
5.2.2	Numerical Treatment.	73
5.3	Application of a Voltage Pulse.	75
	References.	78
6	Time-Resolved Dynamics of Josephson Junctions.	81
6.1	The Bogoliubov-de Gennes Equation	82
6.1.1	Calculating Charge and Current in Superconducting Systems.	83
6.1.2	From Second to First Quantisation	84
6.2	Relevant Concepts for Superconducting Junctions	86
6.2.1	Andreev Reflection	87
6.2.2	Josephson Junctions	88
6.3	Time-Resolved Simulations of Josephson Junctions	91
6.3.1	Multiple Andreev Reflection and the a.c Josephson Effect	92
6.3.2	Relaxation of Andreev Bound States.	94
6.3.3	Propagation of a Voltage Pulse	95
	References.	99

7	Manipulating Andreev and Majorana Resonances in Nanowires. . .	101
7.1	Model for Normal-Insulator-Normal-Superconductor (NINS) Junctions.	101
7.2	Scattering Approach to Andreev Resonances	104
7.3	Trains of Voltage Pulses Applied to NINS Junctions	107
7.4	Majorana States in NINS Junctions	111
7.4.1	Introduction to Majorana States	111
7.4.2	Realisation of Majorana States In Nanowires	113
7.4.3	Scattering Perspective on Majorana Resonances	115
7.5	Manipulating Majorana Resonances with Voltage Pulses	117
7.6	Simulations in the Presence of Disorder and Finite Temperature.	120
	References.	122
8	Conclusion	125
	References.	126
	Appendix A: Discretising Continuous Models.	127
	Appendix B: The Peierls Substitution	131
	Appendix C: Gauge Transformations	135

Numerical Methods for Time-Resolved Quantum
Nanoelectronics

Weston, J.

2017, XIII, 138 p. 53 illus., 10 illus. in color., Hardcover
