Part I Introduction and Motivation

1	It Is All About Gravity	3
1.1	Approach to Classical Gravity and Quantum Field Theory	4
1.1.1	Classical Gravity and Its Limitations	4
1.1.2	Quantum Field Theory and Its Issues	6
1.1.3	Gravity Is Peculiar	6
1.1.4	Gravity and Quantum Theory: Chaos Out of Order	7
1.2	Quantum Matter in Classical Gravity	8
1.2.1	Quantum Fields in Curved Spacetime—What Can We Learn About Quantum Gravity?	8
1.2.2	Tussle of Titans: Black Hole Evaporation Versus Loss of Information	9
1.3	The Final Frontier: A Quantum Theory of Gravity	12
1.3.1	The Need to Quantize Gravity	12
1.3.2	Approaches to Quantize Gravity	12
1.3.3	Gravity May Not Be a Fundamental Interaction	13
1.3.4	Trademark of Quantum Gravity—Existence of Zero Point Length	16
	References	17

Part II Geometrical Aspects of Gravitational Action

2	Setting the Stage: Review of Previous Results	23
2.1	Introduction	23
2.2	A Fresh Look at the Einstein-Hilbert Action	24
2.2.1	On the Structure of the Einstein-Hilbert Action	25
2.2.2	In Search of Alternative Variables in General Relativity	26
2.2.3	Einstein-Hilbert Action in Terms of the New Variables	26

2.2.4	Noether Current.	29
2.2.5	Gravitational Momentum.	30
2.3	Lanczos-Lovelock Gravity: A Brief Introduction	31
2.3.1	How Does Lanczos-Lovelock Gravity Comes About?.	32
2.3.2	Noether Current and Entropy for Lanczos-Lovelock Gravity	35
2.4	Construction of Gaussian Null Coordinates	36
2.5	Looking to the Future.	39
	References.	39
3	Alternative Geometrical Variables in Lanczos-Lovelock Gravity.	43
3.1	Introduction	43
3.2	Possible Generalization of Conjugate Variables to Lanczos-Lovelock Gravity	44
3.3	Describing Gravity in Terms of Conjugate Variables	46
3.3.1	Einstein-Hilbert Action with the New Set of Variables.	46
3.3.2	Generalization to Lanczos-Lovelock Gravity	48
3.4	Concluding Remarks.	51
	Appendix	51
	References.	55
 Part III Thermodynamics, Gravity and Null Surfaces		
4	Thermodynamic Interpretation of Geometrical Variables	59
4.1	Introduction	59
4.2	Thermodynamics Related to Lanczos-Lovelock Action	60
4.2.1	A General Static Spacetime.	61
4.2.2	Generalization to Arbitrary Null Surface	62
4.3	Concluding Remarks.	64
	References.	65
5	Spacetime Evolution and Equipartition in Lanczos-Lovelock Gravity.	67
5.1	Introduction	67
5.2	Warm Up: Some Illustrative Examples in General Relativity.	68
5.3	Generalization to Lanczos-Lovelock Gravity	73
5.3.1	Heat Content of Spacetime in Lanczos-Lovelock Gravity	73
5.3.2	Evolution Equation of Spacetime in Lanczos-Lovelock Gravity.	74

5.4	Discussion	77
	Appendix A	78
	References	84
6	Lanczos-Lovelock Gravity from a Thermodynamic Perspective	85
6.1	Introduction	85
6.2	Thermodynamic Identity from Gravitational Field Equations	85
6.3	Applications	88
6.3.1	Stationary Spacetime	89
6.3.2	Spherically Symmetric Spacetime	89
6.4	Thermodynamic Interpretations in Lanczos-Lovelock Gravity	91
6.4.1	Bulk Gravitational Dynamics and Its Relation to Surface Thermodynamics in Lanczos-Lovelock Gravity	91
6.4.2	Heat Density of the Null Surfaces	95
6.5	Discussion	97
	Appendix A	98
	References	106
7	Null Surface Geometry and Associated Thermodynamics	109
7.1	Introduction	109
7.2	Noether Current and Spacetime Thermodynamics: Null Surfaces	110
7.3	Reduced Gravitational Momentum and Time Development Vector	114
7.4	Projections of Gravitational Momentum on the Null Surface	116
7.4.1	Navier-Stokes Equation	117
7.4.2	A Thermodynamic Identity for the Null Surface	120
7.4.3	Evolution of the Null Surface	122
7.5	Conclusions	124
	Appendix A	125
	References	143
8	Entropy of a Generic Null Surface from Its Associated Virasoro Algebra	145
8.1	Introduction	145
8.2	The Formalism	146
8.3	Entropy Associated with an Arbitrary Null Surface	147
8.4	Summary	150
	Appendix	151
	References	152

Part IV Classical Gravity, Quantum Matter

9	A Quantum Peek Inside the Black Hole Event Horizon	157
9.1	Introduction, Motivation and Summary of Results	157
9.2	The Gravitational Collapse Geometry	163
9.2.1	Junction Conditions	163
9.2.2	Double Null Coordinates	166
9.3	Regularised Stress-Energy Tensor	168
9.4	Energy Density and Flux Observed by Different Observers	169
9.4.1	Static Observers in Region C	169
9.4.2	Radially In-Falling Observers	171
9.5	Energy Density and Flux on Events Along Specific Null Rays	178
9.6	Effective Temperature Measured by Detectors	181
9.6.1	Effective Temperature as a Measure of Detector Response	181
9.6.2	Static Detectors in Region C	182
9.6.3	Radially In-Falling Detectors: Inside Regions D and A	183
9.6.4	Radially In-Falling Detectors: Outside Regions C and B	184
9.7	Conclusion	186
	Appendix A	188
	References	197
10	Information Retrieval from Black Holes	199
10.1	Introduction: The Black Hole Information Loss Paradox	199
10.2	Initial State of Spherical Collapse	202
10.3	Information of Black Hole Formation: Correlation Function	205
10.4	Radiation from Black Hole: Information About the Initial State	207
10.5	CGHS Model: Introduction	209
10.6	Information Regarding the Collapsing Matter	213
10.6.1	Test Field Approximation	214
10.6.2	Adding Back-Reaction: Extracting Information About the Matter Forming the Black Hole	215
10.7	Conclusions	217
	Appendix A	219
	References	226

11	Dynamic Realization of the Unruh Effect for a Geodesic Observer	229
11.1	Introduction	229
11.2	A Picture Book Representation	231
11.3	A Null Shell Collapse	234
11.4	Dynamical Unruh Effect in CGHS Black Hole Spacetime	236
11.5	Unruh-DeWitt Detector Response	242
	References	244
 Part V Zero Point Length—Towards Quantum Gravity		
12	Spacetime with Zero Point Length is Two-Dimensional at the Planck Scale	249
12.1	Introduction and Motivation	249
12.2	Volume and Area in Presence of Zero Point Length	251
12.3	Conclusions	254
	References	254
 Part VI Summary and Outlook		
13	Summary and Outlook	259
	References	263

Classical and Quantum Aspects of Gravity in Relation to
the Emergent Paradigm

Chakraborty, S.

2017, XXI, 263 p. 26 illus. in color., Hardcover

ISBN: 978-3-319-63732-7
