

Contents

1	Overview	1
2	Introduction to Quantum Many-Body Physics	5
2.1	Defining the Problem	6
2.1.1	The Basics	6
2.1.2	Elementary Models	7
2.1.3	Statics and Dynamics	9
2.1.4	Quantum Phases and Phase Transitions	11
2.1.5	The Link with Experiment	12
2.2	Entanglement in the Low-Energy Subspace	13
2.3	Low-Dimensional Quantum Physics	15
2.3.1	One Dimension	16
2.3.2	Two Dimensions	18
2.4	Numerical Techniques	19
2.5	Integrability and the Bethe Ansatz	20
2.5.1	Solving the Heisenberg Model	20
2.5.2	Coordinate Bethe Ansatz: General Set-Up	23
2.5.3	Thermodynamic Bethe Ansatz	25
2.5.4	Dynamics and Out-of-Equilibrium	25
2.5.5	Breaking Integrability	28
2.6	Tensor Networks	29
2.6.1	The Density-Matrix Renormalization Group	30
2.6.2	Finitely Correlated States	32
2.6.3	Matrix Product States	33
2.6.4	Simulating Spin Chains with MPS	37
2.6.5	Projected Entangled-Pair States	41
2.6.6	Significant Other	43
2.7	Renormalization and Effective Particles	43
	References	44

3	Effective Particles in Quantum Spin Chains: The Framework.	59
3.1	The Variational Approach.	60
3.2	The Ground State and Its Correlations	64
3.3	One-Particle Excitations	68
3.3.1	The Variational Ansatz	68
3.3.2	Computing Expectation Values	71
3.3.3	Solving the Eigenvalue Problem	74
3.3.4	One-Particle Form Factors.	76
3.3.5	Topological Particle Excitations	77
3.3.6	Larger Blocks	78
3.4	Two-Particle States	80
3.4.1	Variational Ansatz.	80
3.4.2	Asymptotic Regime.	82
3.4.3	Solving the Full Eigenvalue Equation.	84
3.4.4	S Matrix and Normalization	85
3.4.5	Bound States.	87
3.5	<i>Intermezzo</i> : Excitations and the MPS Tangent Space	88
3.6	Scattering Theory in One Dimension	89
3.6.1	Møller Operators, the S Matrix and Stationary Scattering States	90
3.6.2	The Connection with Variational Scattering States	97
3.6.3	Scattering Phase, Scattering Length and Bound States	98
3.6.4	Dynamical Scattering Theory	100
3.7	Finite Density of Excitations: The Approximate Bethe Ansatz	103
3.7.1	The Bethe Ansatz Wavefunction.	103
3.7.2	Correlation Functions: The Luttinger Liquid.	106
3.7.3	Limiting Cases	107
3.7.4	Thermodynamic Bethe Ansatz.	108
3.7.5	Effective Integrable Field Theories	109
3.8	Dynamical Correlations	110
3.8.1	Spectral Functions at Zero Temperature	110
3.8.2	Divergences in the Density of States.	112
3.8.3	Adding an Imaginary Frequency.	113
3.8.4	Spectral Functions at Finite Temperature	114
3.9	Effective Field Theory	116
3.10	Non-equilibrium Processes	118
	References.	119
4	Effective Particles in Quantum Spin Chains: Applications.	125
4.1	The Spin-1 Heisenberg Chain.	127
4.2	The Spin-1/2 Heisenberg Antiferromagnetic Ladder.	136
4.3	The Frustrated and Dimerized Spin Chain	146
4.4	The Gapped XXZ Chain.	152

4.5	The Anisotropic Heisenberg Spin-1 Chain	154
4.6	Future Applications	157
	References.	159
5	Towards a Particle Theory in Two Dimensions	167
5.1	A PEPS and Its Tangent Space.	169
5.2	Transfer Matrices and Approximating Effective Environments.	170
5.2.1	The Linear Transfer Matrix.	171
5.2.2	The Corner Transfer Matrix	173
5.2.3	Channel Environments	175
5.2.4	Static Structure Factor.	177
5.3	Ground-State Optimization	179
5.3.1	Computing the Gradient	180
5.3.2	The Energy Variance	182
5.4	Ground State Optimization: Benchmarks	185
5.4.1	Transverse Ising Model.	185
5.4.2	Heisenberg Models	187
5.5	Elementary Particle Excitations.	189
5.5.1	The Excitation Ansatz.	189
5.5.2	The Eigenvalue Problem.	191
5.6	Excitations in Frustration-Free Systems	193
5.6.1	Two-Dimensional AKLT Model.	193
5.6.2	The Filtered Toric Code Model.	196
5.7	Outlook	198

Tensor Network States and Effective Particles for
Low-Dimensional Quantum Spin Systems

Vanderstraeten, L.

2017, XIII, 219 p. 54 illus., 48 illus. in color., Hardcover

ISBN: 978-3-319-64190-4
