

Contents

1	The Classical Theory	1
1.1	Introduction	2
1.2	Regular Points of Smooth Maps: Theorems of Lyusternik and Graves	8
1.3	The Inverse and Implicit Function Theorems	12
1.4	Regular and Critical Values: Theorems of Sard and Smale	15
1.5	Manifolds	21
1.6	Transversality	23
1.7	The Morse Lemma	26
1.8	Exercises	28
2	Metric Theory: Phenomenology	33
2.1	Introduction	35
2.2	Regularity: Definitions and Equivalences	42
2.2.1	Local Regularity	42
2.2.2	General (Non-local) Case: Definitions and Discussion	48
2.2.3	Restricted Regularity	54
2.2.4	Regularity and Completeness	55
2.3	General Regularity Criteria	57
2.3.1	The Basic Lemma and Error Bounds	58
2.3.2	Main Regularity Criteria	60
2.3.3	A Fundamental Application – The Density Theorem	65
2.4	Related Concepts: Metric Subregularity, Calmness, Controllability, Linear Recession	66
2.5	Perturbations and Stability	71
2.6	Metric Implicit Function Theorems: Strong Regularity	76
2.7	Nonlinear Regularity Models	83
2.8	Supplement: Regularity of a Composition	87
2.9	Comments	90

3	Metric Theory: The Infinitesimal Viewpoint	99
3.1	Slopes and Metric Geometry	100
3.1.1	Curves and Lengths	101
3.1.2	Slope: An Infinitesimal Characterization of Length Spaces	102
3.1.3	Locally Coherent Spaces	105
3.2	Infinitesimal Regularity Criteria	107
3.2.1	Some Non-local Infinitesimal Results	108
3.2.2	Three Infinitesimal Local Regularity Criteria	110
3.2.3	Slope Criteria for Calmness and Subregularity	116
3.2.4	A Perturbation Theorem: Milyutin's Estimate Is Sharp	118
3.2.5	A Variational Approach	120
3.3	The Metric Implicit Function Theorem – Infinitesimal Version	122
3.4	Nonlinear Regularity Models – An Infinitesimal Viewpoint	126
3.4.1	Regularity of Order k	126
3.4.2	Error Bounds of Order k	129
3.4.3	The Variational Viewpoint	130
3.5	A Few Remarks Concerning Global Regularity	134
3.6	Comments	137
4	Subdifferentials: A Short Introduction	141
4.1	Introduction	142
4.2	Subdifferentials: General View	151
4.3	Subdifferentials of Fréchet and Hadamard. Tangent Cones	155
4.4	Subdifferentials of the Distance Function and Normal Cones	164
4.5	The Limiting Fréchet Subdifferential and Subdifferential Calculus in Asplund Spaces	171
4.6	Approximate G -subdifferential and Subdifferential Calculus in General Banach Spaces	174
4.6.1	G -subdifferential of a Lipschitz Function	177
4.6.2	General Case	182
4.6.3	The G -subdifferential on WCG Spaces	186
4.7	The Generalized Gradient	188
4.8	Comments	190
5	Banach Space Theory: Regularity Criteria	195
5.1	Homogeneous Mappings, Derivatives and Coderivatives	197
5.2	General Primal and Dual Regularity Criteria	202
5.2.1	The Case of a Single-Valued Mapping	203
5.2.2	Primal Estimates	205
5.2.3	Dual (Subdifferential or Coderivative) Estimates	209

5.2.4	Comparison of the Estimates	213
5.2.5	Exact Estimates	217
5.3	Point Criteria and Separable Reduction	222
5.3.1	Point Criteria	224
5.3.2	Separable Reduction	225
5.4	Linear Perturbations and Perfect Regularity	229
5.4.1	Radius of Regularity	229
5.4.2	Stability of Solutions with Respect to Linear Perturbations	232
5.4.3	A Counterexample: Failure of the Radius Formula in an Infinite-Dimensional Case	234
5.5	Comments	241
6	Banach Space Theory: Special Classes of Mappings	245
6.1	Error Bounds	246
6.1.1	Error Bounds for Convex Functions	247
6.1.2	General Results on Global Error Bounds	251
6.1.3	Comments	254
6.2	Mappings with Convex Graphs	254
6.2.1	Convex Processes	254
6.2.2	Mappings with Convex Graphs: The Robinson–Ursescu Theorem	259
6.2.3	Mappings with Convex Graphs: Regularity Rates	261
6.2.4	Linear Perturbations and Distance to Infeasibility	264
6.2.5	Systems of Convex Inequalities	270
6.2.6	Comments	272
6.3	Single-Valued Lipschitz Maps	273
6.3.1	The Case of an Asplund Space	274
6.3.2	Prederivatives and Directional Compactness	275
6.3.3	Scalarized Neighborhood Regularity Criteria	278
6.3.4	Semi-Fredholm Mappings and Point Criteria	282
6.3.5	Approximation by Sets of Linear Operators	288
6.3.6	Comments	292
6.4	Subdifferentials and Monotone Operators	293
6.4.1	Subdifferentials and Quadratic Growth	293
6.4.2	Enter Convexity and Monotonicity	296
6.4.3	Comments	297
7	Applications to Analysis and Optimization 1	299
7.1	Transversality	301
7.1.1	Transversality of Sets	301
7.1.2	Transversality of a Mapping to a Set in the Range Space	306
7.1.3	Comments	309

7.2	Subdifferential Calculus	310
7.3	Implicit Functions in Banach Spaces	319
7.3.1	General Results on Implicit Functions.	320
7.3.2	Implicit Function Theorem for Generalized Equations	323
7.3.3	Comments.	324
7.4	Differential Inclusions – Existence of Solutions	326
7.4.1	Local Existence Theorem	326
7.4.2	Existence on the Entire Interval	328
7.4.3	Dependence on Initial Conditions	330
7.4.4	Comments.	332
7.5	Necessary Conditions for Optimality	333
7.5.1	Non-controllability and Optimality	334
7.5.2	Exact Penalty	336
7.5.3	Second-Order Conditions	338
7.5.4	The Optimality Alternative	342
7.6	Optimal Control of Differential Inclusions	345
7.7	Fixed Points of Set-Valued Mappings	353
7.7.1	Existence of Fixed Points	353
7.7.2	Consequences for Stability and Globally Defined Mappings	359
7.7.3	The Two Maps Paradigm: Double Fixed Points and Related Problems	361
7.7.4	Comments.	362
8	Regularity in Finite-Dimensional Spaces	365
8.1	Regularity in IR^n	367
8.1.1	Regularity	367
8.1.2	Subregularity.	371
8.1.3	Transversality	374
8.1.4	Linear Perturbations and Stability	376
8.1.5	Local Versus Global Regularity	377
8.1.6	A Few Remarks Concerning Subdifferentials in IR^n	378
8.2	Polyhedral and Semi-linear Sets and Mappings	379
8.2.1	Face Geometry	380
8.2.2	Regularity Properties of Polyhedral and Semi-linear Mappings	385
8.2.3	Piecewise Affine Mappings.	390
8.3	Semi-algebraic Geometry (D. Drusvyatskiy).	394
8.3.1	Recognizing Semi-algebraicity	394
8.3.2	Basic Structure	396
8.3.3	The Size of Semi-algebraic Subdifferential Graphs	402
8.3.4	The Kurdyka–Łojasiewicz Inequality	407

8.4	A Semi-algebraic Sard Theorem and Generic Behavior	409
8.4.1	Sard's Theorem for Semi-algebraic Set-Valued Mappings	409
8.4.2	Generic Transversality	411
8.5	Comments	413
9	Applications to Analysis and Optimization 2.	415
9.1	Variational Inequalities over Polyhedral Sets	417
9.1.1	The Main Result	418
9.1.2	Characterization Theorem	422
9.1.3	Regularity Rates	426
9.1.4	Application to KKT Systems	430
9.1.5	Comments	433
9.2	The Method of Alternating Projections	434
9.2.1	The Case of Convex Sets	434
9.2.2	The Case of Nonconvex Sets	437
9.2.3	Comments	442
9.3	Curves of Descent	443
9.3.1	Curves of Maximal and Near Maximal Slope	443
9.3.2	Existence Theorem	445
9.3.3	Representation by Subdifferential Dynamical Systems	449
9.3.4	Curves of Near Maximal Slope for Semi-algebraic Functions	451
9.3.5	Comments	454
9.4	Regularity Properties of Subdifferentials and Local Minima of Functions	454
9.4.1	The Case of a Semi-algebraic Function	454
9.4.2	First-Order Characterization of Second-Order Behavior	457
9.4.3	Strong Metric Regularity, Tilt Stability and Strong Optimality	461
9.4.4	Comments	465
9.5	Some Genericity Results	466
9.5.1	Tame Optimization	466
9.5.2	Debreu's Theorem on Regular Economies	472
9.5.3	Comments	476
	Notation	477
	Bibliography	481
	Index	493

Variational Analysis of Regular Mappings

Theory and Applications

Ioffe, A.

2017, XXI, 495 p. 11 illus., 2 illus. in color., Hardcover

ISBN: 978-3-319-64276-5
