| <b>Preface</b> .....   | v    |
| 0.1 Acknowledgements .....   | viii |
| <b>1 Introduction and Overview</b> .....   | 1    |
| 1.1 Introduction .....   | 1    |
| 1.2 Basic principles of quantum mechanics .....  | 3    |
| 1.2.1 Fundamental axioms of quantum mechanics .....  | 3    |
| 1.2.2 Principles of measurement theory .....   | 5    |
| 1.3 Unitary group representations .....  | 6    |
| 1.3.1 Lie groups .....   | 7    |
| 1.3.2 Group representations .....  | 7    |
| 1.3.3 Unitary group representations .....  | 10   |
| 1.4 Representations and quantum mechanics .....  | 11   |
| 1.5 Groups and symmetries .....  | 12   |
| 1.6 For further reading .....  | 13   |
| <b>2 The Group <math>U(1)</math> and its Representations</b> .....                             | 15   |
| 2.1 Some representation theory .....   | 16   |
| 2.2 The group $U(1)$ and its representations .....   | 19   |
| 2.3 The charge operator .....  | 21   |
| 2.4 Conservation of charge and $U(1)$ symmetry .....   | 24   |
| 2.5 Summary .....  | 25   |
| 2.6 For further reading .....  | 26   |
| <b>3 Two-state Systems and <math>SU(2)</math></b> .....  | 27   |
| 3.1 The two-state quantum system .....   | 28   |
| 3.1.1 The Pauli matrices: observables of the two-state<br>quantum system .....                 | 28   |
| 3.1.2 Exponentials of Pauli matrices: unitary<br>transformations of the two-state system ..... | 30   |

|          |   |           |
|----------|---|-----------|
| 3.2      | Commutation relations for Pauli matrices . . . . .  | 34        |
| 3.3      | Dynamics of a two-state system . . . . .  | 36        |
| 3.4      | For further reading . . . . .   | 37        |
| <b>4</b> | <b>Linear Algebra Review, Unitary and Orthogonal Groups . . . . .</b>                         | <b>39</b> |
| 4.1      | Vector spaces and linear maps . . . . .   | 39        |
| 4.2      | Dual vector spaces . . . . .  | 41        |
| 4.3      | Change of basis . . . . .   | 43        |
| 4.4      | Inner products . . . . .  | 43        |
| 4.5      | Adjoint operators . . . . .   | 47        |
| 4.6      | Orthogonal and unitary transformations . . . . .  | 48        |
|          | 4.6.1 Orthogonal groups . . . . .   | 48        |
|          | 4.6.2 Unitary groups . . . . .  | 50        |
| 4.7      | Eigenvalues and eigenvectors . . . . .  | 51        |
| 4.8      | For further reading . . . . .   | 53        |
| <b>5</b> | <b>Lie Algebras and Lie Algebra Representations . . . . .</b>                                 | <b>55</b> |
| 5.1      | Lie algebras . . . . .  | 56        |
| 5.2      | Lie algebras of the orthogonal and unitary groups . . . . .                                   | 59        |
|          | 5.2.1 Lie algebra of the orthogonal group . . . . .   | 60        |
|          | 5.2.2 Lie algebra of the unitary group . . . . .  | 61        |
| 5.3      | A summary . . . . .   | 62        |
| 5.4      | Lie algebra representations . . . . .   | 63        |
| 5.5      | Complexification . . . . .  | 68        |
| 5.6      | For further reading . . . . .   | 71        |
| <b>6</b> | <b>The Rotation and Spin Groups in Three and Four Dimensions . . . . .</b>                    | <b>73</b> |
| 6.1      | The rotation group in three dimensions . . . . .  | 73        |
| 6.2      | Spin groups in three and four dimensions . . . . .  | 76        |
|          | 6.2.1 Quaternions . . . . .   | 77        |
|          | 6.2.2 Rotations and spin groups in four dimensions . . . . .                                  | 78        |
|          | 6.2.3 Rotations and spin groups in three dimensions . . . . .                                 | 79        |
|          | 6.2.4 The spin group and $SU(2)$ . . . . .  | 83        |
| 6.3      | A summary . . . . .   | 85        |
| 6.4      | For further reading . . . . .   | 86        |
| <b>7</b> | <b>Rotations and the Spin <math>\frac{1}{2}</math> Particle in a Magnetic Field . . . . .</b> | <b>87</b> |
| 7.1      | The spinor representation . . . . .   | 87        |
| 7.2      | The spin $\frac{1}{2}$ particle in a magnetic field . . . . .                                 | 89        |
| 7.3      | The Heisenberg picture . . . . .  | 93        |
| 7.4      | Complex projective space . . . . .  | 94        |
| 7.5      | The Bloch sphere . . . . .  | 98        |
| 7.6      | For further reading . . . . .   | 101       |

|           |  |     |
|-----------|--|-----|
| <b>8</b>  | <b>Representations of <math>SU(2)</math> and <math>SO(3)</math></b>              | 103 |
| 8.1       | Representations of $SU(2)$ : classification                                      | 104 |
| 8.1.1     | Weight decomposition   | 104 |
| 8.1.2     | Lie algebra representations: raising<br>and lowering operators                   | 106 |
| 8.2       | Representations of $SU(2)$ : construction  | 112 |
| 8.3       | Representations of $SO(3)$ and spherical harmonics                               | 115 |
| 8.4       | The Casimir operator   | 122 |
| 8.5       | For further reading  | 124 |
| <b>9</b>  | <b>Tensor Products, Entanglement, and Addition of Spin</b>                       | 125 |
| 9.1       | Tensor products  | 126 |
| 9.2       | Composite quantum systems and tensor products                                    | 128 |
| 9.3       | Indecomposable vectors and entanglement  | 129 |
| 9.4       | Tensor products of representations   | 130 |
| 9.4.1     | Tensor products of $SU(2)$ representations                                       | 131 |
| 9.4.2     | Characters of representations  | 132 |
| 9.4.3     | Some examples  | 133 |
| 9.5       | Bilinear forms and tensor products   | 135 |
| 9.6       | Symmetric and antisymmetric multilinear forms                                    | 136 |
| 9.7       | For further reading  | 138 |
| <b>10</b> | <b>Momentum and the Free Particle</b>  | 139 |
| 10.1      | The group $\mathbf{R}$ and its representations                                   | 140 |
| 10.2      | Translations in time and space   | 142 |
| 10.2.1    | Energy and the group $\mathbf{R}$ of time translations                           | 142 |
| 10.2.2    | Momentum and the group $\mathbf{R}^3$ of space<br>translations                   | 143 |
| 10.3      | The energy–momentum relation and the Schrödinger<br>equation for a free particle | 144 |
| 10.4      | For further reading  | 147 |
| <b>11</b> | <b>Fourier Analysis and the Free Particle</b>                                    | 149 |
| 11.1      | Periodic boundary conditions and the group $U(1)$                                | 150 |
| 11.2      | The group $\mathbf{R}$ and the Fourier transform                                 | 154 |
| 11.3      | Distributions  | 157 |
| 11.4      | Linear transformations and distributions   | 159 |
| 11.5      | Solutions of the Schrödinger equation in momentum<br>space                       | 161 |
| 11.6      | For further reading  | 164 |
| <b>12</b> | <b>Position and the Free Particle</b>  | 165 |
| 12.1      | The position operator  | 165 |
| 12.2      | Momentum space representation  | 166 |
| 12.3      | Dirac notation   | 167 |

|           |  |            |
|-----------|--|------------|
| 12.4      | Heisenberg uncertainty   | 169        |
| 12.5      | The propagator in position space                               | 170        |
| 12.6      | Propagators in frequency–momentum space                        | 174        |
| 12.7      | Green’s functions and solutions to the Schrödinger equations   | 177        |
| 12.8      | For further reading  | 180        |
| <b>13</b> | <b>The Heisenberg group and the Schrödinger Representation</b> | <b>181</b> |
| 13.1      | The Heisenberg Lie algebra                                     | 182        |
| 13.2      | The Heisenberg group   | 183        |
| 13.3      | The Schrödinger representation                                 | 185        |
| 13.4      | For further reading  | 188        |
| <b>14</b> | <b>The Poisson Bracket and Symplectic Geometry</b>             | <b>189</b> |
| 14.1      | Classical mechanics and the Poisson bracket                    | 190        |
| 14.2      | The Poisson bracket and the Heisenberg Lie algebra             | 192        |
| 14.3      | Symplectic geometry  | 195        |
| 14.4      | For further reading  | 198        |
| <b>15</b> | <b>Hamiltonian Vector Fields and the Moment Map</b>            | <b>199</b> |
| 15.1      | Vector fields and the exponential map                          | 200        |
| 15.2      | Hamiltonian vector fields and canonical transformations        | 202        |
| 15.3      | Group actions on $M$ and the moment map                        | 207        |
| 15.4      | Examples of Hamiltonian group actions                          | 210        |
| 15.5      | The dual of a Lie algebra and symplectic geometry              | 211        |
| 15.6      | For further reading  | 214        |
| <b>16</b> | <b>Quadratic Polynomials and the Symplectic Group</b>          | <b>215</b> |
| 16.1      | The symplectic group   | 216        |
| 16.1.1    | The symplectic group for $d = 1$                               | 216        |
| 16.1.2    | The symplectic group for arbitrary $d$                         | 220        |
| 16.2      | The symplectic group and automorphisms of the Heisenberg group | 222        |
| 16.2.1    | The adjoint representation and inner automorphisms             | 223        |
| 16.2.2    | The symplectic group as automorphism group                     | 224        |
| 16.3      | The case of arbitrary $d$                                      | 226        |
| 16.4      | For further reading  | 227        |
| <b>17</b> | <b>Quantization</b>  | <b>229</b> |
| 17.1      | Canonical quantization   | 229        |
| 17.2      | The Groenewold–van Hove no-go theorem                          | 232        |
| 17.3      | Canonical quantization in $d$ dimensions                       | 234        |
| 17.4      | Quantization and symmetries                                    | 234        |
| 17.5      | More general notions of quantization                           | 235        |
| 17.6      | For further reading  | 236        |

|           |   |     |
|-----------|---|-----|
| <b>18</b> | <b>Semi-direct Products</b>   | 237 |
| 18.1      | An example: the Euclidean group   | 237 |
| 18.2      | Semi-direct product groups  | 239 |
| 18.3      | Semi-direct product Lie algebras  | 241 |
| 18.4      | For further reading   | 243 |
| <b>19</b> | <b>The Quantum Free Particle as a Representation of the Euclidean Group</b> | 245 |
| 19.1      | The quantum free particle and representations of $E(2)$                     | 246 |
| 19.2      | The case of $E(3)$  | 251 |
| 19.3      | Other representations of $E(3)$   | 254 |
| 19.4      | For further reading   | 256 |
| <b>20</b> | <b>Representations of Semi-direct Products</b>                              | 259 |
| 20.1      | Intertwining operators and the metaplectic representation                   | 260 |
| 20.2      | Constructing intertwining operators   | 262 |
| 20.3      | Explicit calculations   | 263 |
| 20.3.1    | The $SO(2)$ action by rotations of the plane for $d = 2$                    | 263 |
| 20.3.2    | An $SO(2)$ action on the $d = 1$ phase space                                | 266 |
| 20.3.3    | The Fourier transform as an intertwining operator                           | 268 |
| 20.3.4    | An $\mathbf{R}$ action on the $d = 1$ phase space                           | 268 |
| 20.4      | Representations of $N \rtimes K$ , $N$ commutative                          | 269 |
| 20.5      | For further reading   | 272 |
| <b>21</b> | <b>Central Potentials and the Hydrogen Atom</b>                             | 275 |
| 21.1      | Quantum particle in a central potential                                     | 275 |
| 21.2      | $\mathfrak{so}(4)$ symmetry and the Coulomb potential                       | 280 |
| 21.3      | The hydrogen atom   | 284 |
| 21.4      | For further reading   | 285 |
| <b>22</b> | <b>The Harmonic Oscillator</b>  | 287 |
| 22.1      | The harmonic oscillator with one degree of freedom                          | 288 |
| 22.2      | Creation and annihilation operators   | 290 |
| 22.3      | The Bargmann–Fock representation  | 294 |
| 22.4      | Quantization by annihilation and creation operators                         | 297 |
| 22.5      | For further reading   | 298 |

|           |   |     |
|-----------|---|-----|
| <b>23</b> | <b>Coherent States and the Propagator for the Harmonic Oscillator</b>                                   | 299 |
| 23.1      | Coherent states and the Heisenberg group action   | 299 |
| 23.2      | Coherent states and the Bargmann–Fock state space   | 302 |
| 23.3      | The Heisenberg group action on operators  | 305 |
| 23.4      | The harmonic oscillator propagator  | 305 |
| 23.4.1    | The propagator in the Bargmann–Fock representation  | 306 |
| 23.4.2    | The coherent state propagator   | 307 |
| 23.4.3    | The position space propagator   | 308 |
| 23.5      | The Bargmann transform  | 309 |
| 23.6      | For further reading   | 311 |
| <b>24</b> | <b>The Metaplectic Representation and Annihilation and Creation Operators, <math>d = 1</math></b>       | 313 |
| 24.1      | The metaplectic representation for $d = 1$ in terms of $a$ and $a^\dagger$                              | 313 |
| 24.2      | Intertwining operators in terms of $a$ and $a^\dagger$  | 317 |
| 24.3      | Implications of the choice of $z, \bar{z}$  | 320 |
| 24.4      | $SU(1, 1)$ and Bogoliubov transformations   | 322 |
| 24.5      | For further reading   | 324 |
| <b>25</b> | <b>The Metaplectic Representation and Annihilation and Creation Operators, arbitrary <math>d</math></b> | 325 |
| 25.1      | Multiple degrees of freedom   | 326 |
| 25.2      | Complex coordinates on phase space and $U(d) \subset Sp(2d, \mathbf{R})$                                | 327 |
| 25.3      | The metaplectic representation and $U(d) \subset Sp(2d, \mathbf{R})$                                    | 331 |
| 25.4      | Examples in $d = 2$ and $3$   | 333 |
| 25.4.1    | Two degrees of freedom and $SU(2)$  | 333 |
| 25.4.2    | Three degrees of freedom and $SO(3)$  | 336 |
| 25.5      | Normal ordering and the anomaly in finite dimensions  | 338 |
| 25.6      | For further reading   | 339 |
| <b>26</b> | <b>Complex Structures and Quantization</b>  | 341 |
| 26.1      | Complex structures and phase space  | 341 |
| 26.2      | Compatible complex structures and positivity  | 344 |
| 26.3      | Complex structures and quantization   | 347 |
| 26.4      | Complex vector spaces with Hermitian inner product as phase spaces                                      | 350 |
| 26.5      | Complex structures for $d = 1$ and squeezed states  | 353 |
| 26.6      | Complex structures and Bargmann–Fock quantization for arbitrary $d$                                     | 356 |
| 26.7      | For further reading   | 356 |

|           |  |     |
|-----------|--|-----|
| <b>27</b> | <b>The Fermionic Oscillator</b>  | 357 |
| 27.1      | Canonical anticommutation relations and the fermionic oscillator                     | 357 |
| 27.2      | Multiple degrees of freedom  | 359 |
| 27.3      | For further reading  | 362 |
