

Contents

1	Introduction	1
1.1	Iteration of Conformal Maps	1
1.2	On Stochastic Models and Connection to Statistical Physics	3
1.2.1	Random Walk and Brownian Motion	3
1.2.2	Ising Model and Other Statistical Physics Models	4
1.2.3	Conformal Invariance of the Scaling Limits	6
1.3	An Example: Percolation Model and Cardy's Formula	7
1.3.1	Cardy's Formula from SLE(6)	7
1.4	On Reading This Book	10
	References	10
2	Introduction to Stochastic Calculus	11
2.1	Brownian Motion	11
2.2	Stochastic Integration	14
2.2.1	Stochastic Integral as L^2 -Extension	15
2.2.2	Stochastic Integral as a Process	18
2.3	Itô's Formula	22
2.3.1	Itô's Formula for a Brownian Motion	22
2.3.2	Itô's Formula for Semimartingales	23
2.4	Further Topics in Stochastic Calculus	25
2.4.1	When Is a Semimartingale a Local Martingale?	25
2.4.2	Time Changes of Local Martingales and Semimartingales	26
2.4.3	Stochastic Differential Equations	29
2.5	Conformal Invariance of Two-Dimensional Brownian Motion	31
2.6	Weak Convergence of Probability Measures	32
	References	34

3	Introduction to Conformal Mappings	35
3.1	Harmonic Functions	35
3.1.1	Mean Value Property and Poisson Kernel	35
3.1.2	Schwarz Reflection Principle	36
3.1.3	Harmonicity and Complex Brownian Motion	37
3.2	Conformal Maps	37
3.2.1	Continuity Up to the Boundary	39
3.2.2	Schwarz–Christoffel Mappings	41
3.3	From Area Theorem to Distortion	42
3.4	Conformally Invariant Tools	44
3.4.1	Harmonic Measure	44
3.4.2	Extremal Length	46
	References	47
4	Loewner Equation	49
4.1	Conformal Maps of the Upper Half-Plane	49
4.1.1	Hydrodynamically Normalized Maps and Half-Plane Capacity	49
4.1.2	Growing Families of Hulls	53
4.2	Loewner Chains	54
4.2.1	Loewner Equation Holds for Simple Curves	54
4.2.2	Solving Loewner Equation with a Continuous Driving Term	60
4.3	Loewner Equations in \mathbb{D} and \mathbb{S}_π	65
4.3.1	Loewner Equation in \mathbb{D}	65
4.3.2	Loewner Equation in the Strip \mathbb{S}_π	67
	References	67
5	Schramm–Loewner Evolution	69
5.1	Schramm–Loewner Evolution and Its Elementary Properties	69
5.1.1	Schramm’s Principle	70
5.1.2	Definition of SLE as a Stochastic Loewner Chain	73
5.2	Advanced Properties of SLE	76
5.2.1	SLE Is Generated by a Curve	76
5.2.2	Phases of SLE	76
5.2.3	Dimension of SLE	77
5.3	Proofs for Some of the Advanced Properties	77
5.3.1	SLE and Bessel Processes	77
5.3.2	Phase Transition from Simple to Non-simple Curve at $\kappa = 4$	80
5.3.3	Transience for $\kappa \in (0, 4]$	81
5.3.4	Phase Transition of Distance from a Point to γ at $\kappa = 8$	82

5.3.5	Phase Transition of $\tau(z)$ at $\kappa = 4$	85
5.3.6	One-Point Function of $SLE(\kappa)$	86
5.4	Variants of SLE	89
5.4.1	Radial $SLE(\kappa)$	90
5.4.2	Dipolar $SLE[\kappa, \alpha]$	90
5.4.3	Coordinate Changes and $SLE(\kappa, \rho)$	91
5.4.4	Special Parameters Values of $SLE(\kappa, \rho)$	93
5.5	Moments of the Derivative of the Loewner Map of $SLE(\kappa)$	95
	References.	100
6	Regularity and Convergence of Random Curves	101
6.1	Continuity Properties of the Loewner Chains	101
6.1.1	Carathéodory Kernel Convergence	102
6.1.2	Continuity Properties of the Mappings $W \mapsto F$ and $W \mapsto g$	102
6.1.3	Continuity Properties of the Mapping $\gamma \mapsto G$	104
6.1.4	Continuity Properties of the Mapping $\gamma \mapsto W$	105
6.1.5	Continuity Properties of the Mapping $W \mapsto \gamma$	106
6.2	Continuity of $SLE(\kappa)$	109
6.2.1	Existence of the Trace for Loewner Chains	109
6.2.2	Auxiliary Results on Conformal Maps	110
6.2.3	Proof of Theorem 5.2	111
6.3	Convergence of Interfaces in the Site Percolation Model	112
6.3.1	Definition of the Site Percolation Model.	113
6.3.2	A Probability Bound on Crossings by Multiple Open Percolation Paths.	115
6.3.3	Distortion Estimates of Annuli	120
6.3.4	Analysis of Tortuosity.	123
6.3.5	Regularity of the Percolation Interface in the Capacity Parametrization and Existence of Subsequent Scaling Limits	127
6.3.6	Cardy–Smirnov Formula of a Crossing Probability.	132
6.3.7	The Characterization of the Percolation Interface Scaling Limit.	139
	References.	141
