|----------|---|----------|
| 1 | Basics of Semiconductor and Spin Physics | 1 |
| | M.I. Dyakonov | |
| 1.1 | Historical Background | 1 |
| 1.2 | Spin Interactions | 2 |
| 1.2.1 | The Pauli Principle | 2 |
| 1.2.2 | Exchange Interaction | 3 |
| 1.2.3 | Spin-Orbit Interaction | 3 |
| 1.2.4 | Hyperfine Interaction with Nuclear Spins | 4 |
| 1.2.5 | Magnetic Interaction | 5 |
| 1.3 | Basics of Semiconductor Physics | 5 |
| 1.3.1 | Electron Energy Spectrum in a Crystal | 5 |
| 1.3.2 | Effective Masses of Electrons and Holes | 6 |
| 1.3.3 | The Effective Mass Approximation | 7 |
| 1.3.4 | Role of Impurities | 7 |
| 1.3.5 | Excitons | 8 |
| 1.3.6 | The Structure of the Valence Band. Light and Heavy Holes | 8 |
| 1.3.7 | Band Structure of GaAs | 11 |
| 1.3.8 | Photo-Generation of Carriers and Luminescence | 12 |
| 1.3.9 | Angular Momentum Conservation in Optical Transitions | 13 |
| 1.3.10 | Low Dimensional Semiconductor Structures | 14 |
| 1.4 | Overview of Spin Physics in Semiconductors | 16 |
| 1.4.1 | Spin Splittings of Energy Bands in Three and Two Dimensions | 16 |
| 1.4.2 | Optical Spin Orientation and Detection | 20 |
| 1.4.3 | Spin Relaxation | 20 |
| 1.4.4 | Hanle Effect | 26 |
| 1.4.5 | Interconnections Between Spin and Charge | 27 |

| | | |
|----------|---|-----------|
| 1.4.6 | Interaction Between the Electron and Nuclear Spin Systems | 28 |
| 1.5 | Overview of the Book Content | 33 |
| | References | 34 |
| 2 | Spin Dynamics of Free Carriers in Quantum Wells | 39 |
| | R.T. Harley, A. Balocchi and T. Amand | |
| 2.1 | Introduction | 39 |
| 2.2 | Optical Measurements of Spin Dynamics | 40 |
| 2.3 | Mechanisms of Spin Relaxation of Free Electrons | 42 |
| 2.4 | Electron Spin Relaxation in Bulk Semiconductors | 45 |
| 2.5 | Electron Spin Relaxation in [001]-Oriented Quantum Wells | 48 |
| 2.5.1 | Symmetrical [001]-Oriented Quantum Wells | 48 |
| 2.5.2 | Structural Inversion Asymmetry in [001]-Oriented Quantum Wells | 51 |
| 2.5.3 | Natural Interface Asymmetry in Quantum Wells | 53 |
| 2.5.4 | Oscillatory Spin-Dynamics in Two-Dimensional Electron Gases | 55 |
| 2.6 | Spin Dynamics of Free Holes in Bulk Material and Quantum Wells | 58 |
| 2.7 | Engineering and Controlling the Spin Dynamics in Quantum Wells | 60 |
| 2.8 | Conclusions | 65 |
| | References | 66 |
| 3 | Exciton Spin Dynamics in Semiconductor Quantum Wells | 69 |
| | Thierry Amand and Xavier Marie | |
| 3.1 | Two-Dimensional Exciton Fine Structure | 69 |
| 3.1.1 | Short-Range Electron-Hole Exchange | 70 |
| 3.1.2 | Long-Range Electron-Hole Exchange | 71 |
| 3.2 | Optical Orientation of Exciton Spin in Quantum Wells | 72 |
| 3.3 | Exciton Spin Dynamics in Quantum Wells | 74 |
| 3.3.1 | Exciton Formation in Quantum Wells | 75 |
| 3.3.2 | Exciton-Bound Hole Spin Relaxation | 76 |
| 3.3.3 | Exciton-Bound Electron Spin Relaxation | 79 |
| 3.3.4 | Exciton Spin Relaxation Mechanism | 81 |
| 3.4 | Exciton Exchange Energy and g-Factor in Quantum Wells | 87 |
| 3.4.1 | Exchange Interaction of Excitons and g-Factor Measured with cw Photoluminescence Spectroscopy | 87 |
| 3.4.2 | Exciton Spin Quantum Beats Spectroscopy | 90 |
| 3.5 | Exciton Spin Dynamics in Type II Quantum Wells | 95 |
| 3.6 | Spin Dynamics in Dense Excitonic Systems | 96 |
| | References | 100 |

| | | |
|----------|--|-----|
| 4 | Exciton Spin Dynamics in Semiconductor Quantum Dots | 105 |
| | Xavier Marie, Bernhard Urbaszek, Olivier Krebs and Thierry Amand | |
| 4.1 | Introduction | 105 |
| 4.2 | Electron-Hole Complexes in Quantum Dots | 107 |
| 4.2.1 | Coulomb Corrections to the Single Particle Picture | 107 |
| 4.2.2 | Fine Structure of Neutral Excitons | 107 |
| 4.3 | Exciton Spin Dynamics in Neutral Quantum Dots Without Applied Magnetic Fields. | 110 |
| 4.3.1 | Exciton Spin Dynamics Under Resonant Excitation | 110 |
| 4.3.2 | Exciton Spin Quantum Beats: The Role of Anisotropic Exchange | 111 |
| 4.4 | Exciton Spin Dynamics in Neutral Quantum Dots in External Magnetic Fields | 113 |
| 4.4.1 | Zeeman Effect Versus Anisotropic Exchange Splittings in Single Dot Spectroscopy | 113 |
| 4.4.2 | Exciton Spin Quantum Beats in Applied Magnetic Fields. | 115 |
| 4.5 | Charged Exciton Complexes: Spin Dynamics Without Applied Magnetic Fields | 116 |
| 4.5.1 | Formation of Trions: Doped and Charge Tuneable Structures | 117 |
| 4.5.2 | Fine Structure and Polarization of X^+ and X^- Excitons. | 118 |
| 4.5.3 | Spin Dynamics in Negatively Charged Exciton Complexes X^{n-} | 119 |
| 4.5.4 | Spin Memory of Trapped Electrons. | 121 |
| 4.6 | Charged Exciton Complexes: Spin Dynamics in Applied Magnetic Fields | 121 |
| 4.6.1 | Electron Spin Polarization in Positively Charged Excitons in Longitudinal Magnetic Fields | 122 |
| 4.6.2 | Electron Spin Coherence in Positively Charged Excitons in Transverse Magnetic Fields | 124 |
| 4.7 | Conclusions | 125 |
| | References. | 126 |
| 5 | Time-Resolved Spin Dynamics and Spin Noise Spectroscopy | 131 |
| | J. Hübner and M. Oestreich | |
| 5.1 | Introduction | 131 |
| 5.2 | Time- and Polarization-Resolved Photoluminescence | 133 |
| 5.2.1 | Experimental Technique | 133 |
| 5.2.2 | Example I: Spin Relaxation in (110) Oriented Quantum Wells | 135 |
| 5.2.3 | Example II: Coherently Coupled Electron and Hole Spins | 137 |

| | | |
|----------|---|------------|
| 5.2.4 | Photoluminescence and Spin-Optoelectronic Devices | 139 |
| 5.3 | Time-Resolved Faraday/Kerr Rotation | 139 |
| 5.3.1 | Experimental Setup | 141 |
| 5.3.2 | Example: Spin Amplification. | 142 |
| 5.4 | Spin Noise Spectroscopy | 144 |
| 5.4.1 | Experimental Realization. | 147 |
| 5.4.2 | Example: Spin Noise Measurements in n-GaAs | 148 |
| 5.4.3 | Example: Spin Noise of Single Holes in Quantum Dots. | 149 |
| 5.5 | Conclusions | 151 |
| | References. | 152 |
| 6 | Coherent Spin Dynamics of Carriers. | 155 |
| | Dmitri R. Yakovlev and Manfred Bayer | |
| 6.1 | Introduction | 155 |
| 6.2 | Spin Coherence in Quantum Wells. | 160 |
| 6.2.1 | Electron Spin Coherence | 161 |
| 6.2.2 | Hole Spin Coherence. | 171 |
| 6.2.3 | Exploiting Carrier Spin Coherence | 175 |
| 6.3 | Spin Coherence in Singly Charged Quantum Dots | 176 |
| 6.3.1 | Exciton and Electron Spin Beats Probed by Faraday Rotation. | 177 |
| 6.3.2 | Generation of Electron Spin Coherence. | 181 |
| 6.3.3 | Mode Locking of Spin Coherence in an Ensemble of Quantum Dots. | 183 |
| 6.3.4 | Nuclei Induced Frequency Focusing of Spin Coherence | 192 |
| 6.3.5 | Manipulation of Spin Coherence | 198 |
| 6.4 | Conclusions | 202 |
| | References. | 203 |
| 7 | Spin Properties of Confined Electrons in Si | 207 |
| | Wolfgang Jantsch and Zbysław Wilamowski | |
| 7.1 | Introduction | 207 |
| 7.2 | Spin-Orbit Effects in Si Quantum Wells. | 210 |
| 7.2.1 | The Rashba–Sheka Field | 210 |
| 7.3 | Spin Relaxation of Conduction Electrons in Si/SiGe Quantum wells. | 215 |
| 7.3.1 | Mechanisms of Spin Relaxation of Conduction Electrons | 215 |
| 7.3.2 | Linewidth and the Longitudinal Relaxation Time of the Two-Dimensional Electron Gas in Si/SiGe | 216 |

| | | |
|----------|---|-----|
| 7.3.3 | Dephasing and Longitudinal Spin Relaxation | 220 |
| 7.3.4 | Comparison with Experiment | 223 |
| 7.4 | Current Induced Spin-Orbit Field | 224 |
| 7.5 | ESR Excited by an AC Current | 226 |
| 7.5.1 | Electric Dipole Versus Magnetic Dipole Spin Excitation | 226 |
| 7.5.2 | The ESR Signal Strength in Two-Dimensional Si/ SiGe Structures- Experimental Results | 227 |
| 7.5.3 | Modeling the Current Induced Excitation and Detection of ESR | 228 |
| 7.5.4 | Power Absorption, Line Shape | 229 |
| 7.6 | Spin Relaxation Under Lateral Confinement. | 230 |
| 7.6.1 | Shallow Donors. | 231 |
| 7.6.2 | From the Two-Dimensional Electron Gas to Quantum Dots. | 233 |
| 7.6.3 | Spin Relaxation and Dephasing in Si Quantum Dots. | 233 |
| 7.7 | Some Results Obtained Since 2008 | 235 |
| 7.8 | Conclusions | 237 |
| | References. | 238 |
| 8 | Spin Hall Effect | 241 |
