

Contents

1	Introduction	1
1.1	Theoretical Interactions	1
1.2	Basic Notions	3
1.3	Organization of the Text	5
2	Duality	9
2.1	A Multifaceted Constant	9
2.2	The Dual Formula	11
3	Calibrated Sub-actions	13
3.1	An Iterative Approximation Approach	13
3.2	Asymptotic Behavior of Lax-Oleinik Operators	17
4	Aubry Set	21
4.1	A Maximizing Non-wandering Set	21
5	Mañé Potential and Peierls Barrier	27
5.1	Action Functionals in Ergodic Optimization	27
5.2	Mañé Potential and Kleene Star	34
6	Representation of Calibrated Sub-actions	37
6.1	The Mañé-Peierls Transform	37
7	Separating Sub-actions	41
7.1	A Minimalist Sub-action	41
8	Further Properties of Sub-actions	47
8.1	Convexity, Non-compactness, and Extremal Elements	47
9	Relations with the Thermodynamic Formalism	53
9.1	Equilibrium States and Maximizing Measures	53
9.2	Examples of Convergence of Equilibrium States	55

Appendix A Bounded Measurable Sub-actions 65
