

Contents

1	Complex Numbers. The Fundamental Theorem of Algebra	1
	Exercises	7
2	\mathbb{R}- and \mathbb{C}-Differentiability	9
	Exercises	14
3	The Stereographic Projection. Conformal Maps. The Open Mapping Theorem	17
	Exercises	22
4	Conformal Maps (Continued). Möbius Transformations	25
	Exercises	30
5	Möbius Transformations (Continued). Generalised Circles. Symmetry	33
	Exercises	38
6	Domains Bounded by Pairs of Generalised Circles. Integration	41
	Exercises	46
7	Primitives Along Paths. Holomorphic Primitives on a Disk. Goursat's Lemma	49
	Exercises	54
8	Proof of Lemma 7.2. Homotopy. The Riemann Mapping Theorem	57
	Exercises	64
9	Cauchy's Independence of Homotopy Theorem. Jordan Domains	67
	Exercises	74
10	Cauchy's Integral Theorem. Proof of Theorem 3.1. Cauchy's Integral Formula	77
	Exercises	84

11 Morera's Theorem. Power Series. Abel's Theorem. Disk and Radius of Convergence	87
Exercises	93
12 Power Series (Cont'd). Expansion of a Holomorphic Function. The Uniqueness Theorem	97
Exercises	103
13 Liouville's Theorem. Laurent Series. Isolated Singularities	107
Exercises	114
14 Isolated Singularities (Continued). Poles and Zeroes. Isolated Singularities at ∞	117
Exercises	124
15 Isolated Singularities at ∞ (Continued). Residues. Cauchy's Residue Theorem	127
Exercises	133
16 Residues (Continued). Contour Integration. The Argument Principle	137
Exercises	143
17 The Argument Principle (Cont'd). Rouché's Theorem. The Maximum Modulus Principle	147
Exercises	152
18 Schwarz's Lemma. (Pre)-Compactness. Montel's Theorem. Hurwitz's Theorem	157
Exercises	163
19 Analytic Continuation	167
Exercises	172
20 Analytic Continuation (Continued). The Monodromy Theorem	175
Exercises	181
21 Proof of Theorem 8.3. Conformal Transformations of Simply-Connected Domains	183
Exercises	189
Index	191

Twenty-One Lectures on Complex Analysis
A First Course

Isaev, A.

2017, XII, 194 p. 30 illus., Softcover

ISBN: 978-3-319-68169-6
