

Contents

1	Introduction: Graphs—Basic Definitions	1
1.1	Graph theory	1
1.1.1	Basic definitions	1
1.1.2	Simple examples	17
1.2	Some polynomial invariants for graphs	21
1.2.1	The Tutte polynomial of a graph	22
1.2.2	The Ihara zeta function	27
1.2.3	The Duursma zeta function	29
1.2.4	Graph theory and mathematical blackjack	34
2	Graphs and Laplacians	41
2.1	Motivation	41
2.2	Basic results	41
2.3	The Moore–Penrose pseudoinverse	53
2.4	Circulant graphs	58
2.4.1	Cycle graphs	60
2.4.2	Relationship to convolution operators	61
2.5	Expander graphs	66
2.6	Cayley graphs	68
2.6.1	Cayley graphs on abelian groups	70
2.6.2	Cayley graphs for non-abelian groups	71
2.7	Additive Cayley graphs	77
2.7.1	Cayley graphs and p -ary functions	80
2.8	Graphs of group quotients	86
2.8.1	Example of the Biggs–Smith graph	94
3	Graphs as Manifolds	97
3.1	Motivation	97
3.2	Calculus on graphs	97
3.3	Harmonic morphisms on a graph	99

3.3.1	Matrix formulation of graph morphisms	102
3.3.2	Identities for harmonic morphisms	106
3.3.3	Covering maps	118
3.3.4	Graph spectra for harmonic morphisms	119
3.3.5	Riemann–Hurwitz formula	120
3.4	G -equivariant covering graphs	121
3.5	A Riemann–Roch theorem on graphs	126
3.5.1	Divisors and the Jacobian	126
3.5.2	Linear systems on graphs	127
3.5.3	Non-special divisors	128
3.5.4	The Riemann–Roch theorem for graphs	132
3.6	Induced maps on divisors	135
3.6.1	The pushforward map	136
3.6.2	The pullback map	137
3.6.3	Dimensions of linear systems and harmonic morphisms	138
4	Chip-Firing Games	145
4.1	Motivation	145
4.2	Introduction	145
4.2.1	The Laplacian	146
4.3	Configurations on graphs	148
4.3.1	Legal configurations	148
4.3.2	Chip-firing and set-firing moves	150
4.3.3	Stable, recurrent, and critical configurations	154
4.3.4	Identifying critical configurations	156
4.3.5	Reduced configurations	158
4.4	Energy pairing on degree 0 configurations	161
4.5	Equivalence classes of configurations	165
4.6	Critical group of a graph	169
4.6.1	The Jacobian and the Picard group	170
4.6.2	Simple examples of critical groups	170
4.6.3	The Smith normal form and invariant factors	171
4.6.4	Energy pairing on the critical group	175
4.7	Examples of critical groups	177
4.7.1	Trees	178
4.7.2	Cycle graphs	178
4.7.3	Complete graphs	179
4.7.4	Wheel graphs	180
4.7.5	Example of Clancy, Leake, and Payne	180
4.7.6	Some Cayley graphs	181
4.7.7	Graphs with cyclic critical groups	186
4.8	Harmonic morphisms and Jacobians	187
4.8.1	Example: morphism from cube to K_4	190

4.9	Dhar's burning algorithm	195
4.9.1	Finding reduced configurations	197
4.9.2	Finding a q -legal configuration equivalent to s	198
4.9.3	Ordered Dhar's algorithm	199
4.9.4	Merino's theorem	204
4.9.5	Computing the critical group of a graph	205
4.10	Application: Biggs' cryptosystem	206
5	Interesting Graphs	209
5.1	Biggs–Smith graph	210
5.2	Brinkmann graph	212
5.3	Chvátal graph	214
5.4	Coxeter graph	216
5.5	Desargues graph	216
5.6	Dürer graph	218
5.7	Dyck graph	220
5.8	Errera graph	223
5.9	Foster graph	225
5.10	Franklin graph	225
5.11	Gray graph	227
5.12	Grötzsch graph	229
5.13	Heawood graph	232
5.14	Hoffman graph	232
5.15	Hoffman–Singleton graph	235
5.16	Nauru graph	235
5.17	Paley graphs	236
5.18	Pappus graph	238
5.19	Petersen graph	241
5.20	Shrikhande graph	241
6	Cayley Graphs of Bent Functions and Codes	245
6.1	Motivation	245
6.2	Introduction	246
6.3	Bent functions	246
6.4	Duals and regularity of bent functions	252
6.5	Partial difference sets	255
6.5.1	Dillon's correspondence	257
6.6	Cayley graphs	257
6.6.1	Strongly regular graphs	259
6.6.2	Cayley graphs of bent functions	261
6.7	Association schemes	263
6.7.1	Adjacency rings (Bose–Mesner algebras)	263
6.7.2	Schur rings	264
6.8	The matrix-walk theorem	268

6.9	Weighted partial difference sets	269
6.10	Weighted Cayley graphs	273
6.10.1	Edge-weighted strongly regular graphs	273
6.10.2	Weighted partial difference sets	273
6.10.3	Level curves of p -ary functions	275
6.10.4	Intersection numbers	275
6.10.5	Cayley graphs of p -ary functions	278
6.10.6	Group actions on bent functions	280
6.11	Fourier transforms and graph spectra	282
6.11.1	Connected components of Cayley graphs	283
6.12	Algebraic normal form	284
6.13	Examples of bent functions	286
6.13.1	Bent functions $GF(3)^2 \rightarrow GF(3)$	286
6.13.2	Bent functions $GF(3)^3 \rightarrow GF(3)$	292
6.13.3	Bent functions $GF(5)^2 \rightarrow GF(5)$	292
6.14	Examples of Cayley graphs	294
6.15	Cayley graphs of linear codes	299
6.16	Analogs and questions	300
6.17	Further reading	302
