## Keynote Talk

|                                                  |   |
|--------------------------------------------------|---|
| Cyber Security in Railways: Quo Vadis? . . . . . | 3 |
| <i>Jens Braband</i>                              |   |

## Communication Challenges in Railway Systems

|                                                                                                       |    |
|-------------------------------------------------------------------------------------------------------|----|
| LTE System Design for Urban Light Rail Transport . . . . .                                            | 17 |
| <i>Gianluca Mandò and Giovanni Giambene</i>                                                           |    |
| A Framework to Evaluate 5G Networks for Smart and Fail-Safe<br>Communications in ERTMS/ETCS . . . . . | 34 |
| <i>Roberto Canonico, Stefano Marrone, Roberto Nardone,<br/>and Valeria Vittorini</i>                  |    |
| Systems-Theoretic Likelihood and Severity Analysis for Safety<br>and Security Co-engineering. . . . . | 51 |
| <i>William G. Temple, Yue Wu, Binbin Chen, and Zbigniew Kalbarczyk</i>                                |    |

## Formal Modelling and Verification for Safety

|                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------|-----|
| Formal Modelling Techniques for Efficient Development of Railway<br>Control Products . . . . .      | 71  |
| <i>M. Butler, D. Dghaym, T. Fischer, T.S. Hoang, K. Reichl, C. Snook,<br/>and P. Tummeltshammer</i> |     |
| OVADO: Enhancing Data Validation for Safety-Critical Railway Systems . . .                          | 87  |
| <i>Manel Fredj, Sven Leger, Abderrahmane Feliachi, and Julien Ordioni</i>                           |     |
| A Domain-Specific Language for Generic Interlocking Models<br>and Their Properties . . . . .        | 99  |
| <i>Linh H. Vu, Anne E. Haxthausen, and Jan Peleska</i>                                              |     |
| Bayesian Network Modeling Applied on Railway Level Crossing Safety . . .                            | 116 |
| <i>Ci Liang, Mohamed Ghazel, Olivier Cazier, Laurent Bouillaut,<br/>and El-Miloudi El-Koursi</i>    |     |
| Deductive Verification of Railway Operations. . . . .                                               | 131 |
| <i>Eduard Kamburjan and Reiner Hähnle</i>                                                           |     |

|                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------|-----|
| Safety Analysis of a CBTC System: A Rigorous Approach with Event-B. . . .                                           | 148 |
| <i>Mathieu Comptier, David Deharbe, Julien Molinero Perez,<br/>Louis Mussat, Thibaut Pierre, and Denis Sabatier</i> |     |
| B-PERFect: Applying the PERF Approach to B Based<br>System Developments . . . . .                                   | 160 |
| <i>Alexandra Halchin, Abderrahmane Feliachi, Neeraj Kumar Singh,<br/>Yamine Ait-Ameur, and Julien Ordioni</i>       |     |
| Formal Verification of Train Control with Air Pressure Brakes . . . . .                                             | 173 |
| <i>Stefan Mitsch, Marco Gario, Christof J. Budnik, Michael Golm,<br/>and André Platzer</i>                          |     |
| <b>Light Rail and Urban Transit</b>                                                                                 |     |
| An Efficient Evaluation Scheme for KPIs in Regulated<br>Urban Train Systems . . . . .                               | 195 |
| <i>Bruno Adeline, Pierre Dersin, Éric Fabre, Loïc Hélouët,<br/>and Karim Kecir</i>                                  |     |
| Redundant and Reliable Architecture Based on Open Source Tools<br>for Light-Rail-Transit On-Board-Systems . . . . . | 212 |
| <i>Vincenzo Di Massa, Mirko Damiani, Maurizio Papini,<br/>and Gianluca Mandò</i>                                    |     |
| Dependable Dynamic Routing for Urban Transport Systems<br>Through Integer Linear Programming . . . . .              | 221 |
| <i>Davide Basile, Felicita Di Giandomenico, and Stefania Gnesi</i>                                                  |     |
| <b>Engineering Techniques and Standards</b>                                                                         |     |
| Theories, Techniques and Tools for Engineering Heterogeneous<br>Railway Networks. . . . .                           | 241 |
| <i>Paulius Stankaitis and Alexei Iliasov</i>                                                                        |     |
| Are Standards an Ambiguity-Free Reference for Product Validation?. . . . .                                          | 251 |
| <i>Alessio Ferrari, Mario Fusani, and Stefania Gnesi</i>                                                            |     |
| <b>Author Index</b> . . . . .                                                                                       | 265 |

Reliability, Safety, and Security of Railway Systems.  
Modelling, Analysis, Verification, and Certification  
Second International Conference, RSSRail 2017,  
Pistoia, Italy, November 14-16, 2017, Proceedings  
Fantechi, A.; Lecomte, T.; Romanovsky, A. (Eds.)  
2017, XVIII, 265 p. 80 illus., Softcover  
ISBN: 978-3-319-68498-7
