

Preface

This volume contains the papers presented at SecITC 2017, the 10th International Conference on Security for Information Technology and Communications (www.secitc.eu), held during June 8–9, 2017, in Bucharest. There were 22 submissions and each submitted paper was reviewed by at least three Program Committee members. The committee decided to accept seven papers (one paper was withdrawn by the authors, after the conference, from the LNCS volume) as well as a further seven invited speakers. For ten years SecITC has been bringing together computer security researchers, cryptographers, industry representatives, and graduate students. The conference focuses on research on any aspect of security and cryptography. The papers present advances in the theory, design, implementation, analysis, verification, or evaluation of secure systems and algorithms. One of SecITC’s primary goals is to bring together researchers belonging to different communities and provide a forum that facilitates the informal exchanges necessary for the emergence of new scientific collaborations. We would like to acknowledge the work of the Program Committee, whose great efforts provided a proper framework for the selection of the papers. The conference was organized by Advanced Technologies Institute, Bucharest University of Economic Studies and Military Technical Academy.
