

Table of Contents

Keynotes	1
Renewable Energy: New Market Environment is Key	3
Solar Energy Systems – Selected Applications	6
Electrical Power Grids – Elektrische Netze	13
Estimation of Reactive Power Compensation in the European Transmission System	15
Modelling of Low-Voltage Grids with the Help of Open Data	21
Self-testing Solid-State Power Controller for High-Voltage-DC Aircraft Applications	26
Power-Transmission via an MMC-based HVDC System for the Rededication of Existing AC-Lines	32
Diversification of Energy Sources in the Republic of Tajikistan and their Financing	39
Assessment of possible Technologies for Small Scale Emergency Power Supplies	43
Wind and Photovoltaic Power Plant – Windkraft und Photovoltaik	51
Provision of Control Reserve by Wind Power Plants – A System Study	53
Practical Considerations regarding Implementation of Wind Power Applications into Real-Time Hardware-In-The-Loop Framework	61
Using Reference Load and PV Profiles for Realistic Evaluations of Residential Energy Systems Including PV Systems	67
Computer Based Analysis of Distributed Wind Farms for Reactive Power Management in Sub-Transmission Grids	74
Regulatory and Market Framework Conditions – Regulierungs-, Markt- und Rahmenbedingungen	81
Connected Charging Services for Electric Vehicles: Analysis for Identifying Smart Charging Strategies in Distributed Energy Systems	83
The Standby Power of Low Power Equipment Must Be Reduced under 100 Milliwatt	89
Status of the National Implementation of the NC RfG in Germany	94
Energy Storage Systems – Energiespeicher	101
Dynamic Requirements on LFP Batteries used for Providing Virtual Inertia	103
Optimization of Cogeneration by Seasonal Heat Storage in an Aquifer	108
A Predictive Control Strategy for Battery Energy Storage Systems to combine Peak Shaving with Primary Frequency Control	113
Underground Pumped Hydroelectric Energy Storage in South Africa using Aquifers and Existing Infrastructure	119
Enhancing Chiller Efficiencies via use of Cold Energy Storage	123
Grid Integration – Netzintegration	131
SmartExergy – Primary Energy Efficient and Hybrid Grid Solutions for Municipal Energy Supply Systems	133
Power Theory as Basis for the Control of Grid-Connected Converter Systems	140
Implementation and Compatibility Analysis of Dynamic Voltage Support and Unintentional Islanding Capability of Power-Electronic Generators	146
Schedule Coordination for Technically and Economically Optimized Virtual Power Plants	153

Fuel Cell and Battery Systems – Brennstoffzellen- und Batteriesysteme	161
Pressure-Dependent Operation of Polymer Electrolyte Membrane Fuel Cells; Exemplified by Aircraft Applications	163
A novel PEM Electrolysis System with Dynamic Hydraulic Compression for an Optimized High-pressure Operation	169
Model-based Lifetime Analysis of 2 nd -life Lithium-Ion Battery Storage Systems for Stationary Applications	175
Charging Strategy for a Residential Battery Storage System using Fuzzy Logic Controller	182
Erratum	191
Decentralized control of residential hybrid heating systems for supply of control power under consideration of local voltage levels	192
Posters	201
Meshed On-Bord Power Supply of Aircrafts	203
Anti-Islanding Detection in Low Voltage Grids	204
Autonomous Emergency Power Supply for the Population below the Threshold of Critical Infrastructures	205
Testing Container for Controllable Membrane Units in PEM Fuel Cells	206
High-Voltage Testing Container for new Power Electronic Circuit Concepts	207
NetzHarmonie – Optimizing Efficiency and Grid Compatibility from the View of Harmonics of Generation Plants	208
Measurement Container for the Time- and Frequency-Dependent Grid Impedance Identification on the 110 kV High Voltage Level	209
Excursion to the 110-kV-Main-Distribution-Station in Hamburg-Jenfeld – Exkursion zum Umspannwerk Jenfeld	211
Energy-Slam 2016	219
List of Authors	223

NEIS Conference 2016

Nachhaltige Energieversorgung und Integration von
Speichern

Schulz, D. (Hrsg.)

2017, X, 227 S. 71 Abb., Hardcover

ISBN: 978-3-658-15028-0
