

Table of content

German abstract (deutsche Zusammenfassung)	V
Acknowledgement	VII
Table of content	IX
Table of figures	XIII
List of tables.....	XVII
List of abbreviations.....	XXI
1 Background and motivation	1
1.1 Problem description	2
1.2 Research objectives and methodologies	5
1.3 Structure of the dissertation.....	8
2 Risk assessment of technological innovations.....	11
2.1 Technological innovations	11
2.2 Precautionary principle and technology assessment.....	13
2.3 Technology characterization as a methodology of TA	15
2.4 Conventional risk assessment in the risk governance process	16
2.4.1 Definition of risk.....	16
2.4.2 Risk and hazard assessment in the risk governance process	17
2.4.3 Definition and determinants of exposure.....	19
2.4.4 Exposure assessment as part of risk assessment.....	23
2.4.5 Significance of exposure assessment in risk regulation and REACH	26
2.5 Nanomaterials as technological innovation	28
2.5.1 Definition of nanotechnologies and nanomaterials.....	28
2.5.2 Properties of iron oxide in bulk- and nanosize.....	29
2.5.3 Properties of silver in bulk- and nanosize	32
2.5.4 Synthesis of nanomaterials	35
2.6 State-of-the-art in the assessment of NOAA exposures	36
2.6.1 Scientific studies on environmental NOAA releases	36
2.6.2 Environmental fate and behavior of NOAAs	39
2.6.3 Environmental models for assessing NOAA exposures	43
2.7 Challenges and needs for prospective assessment of NOAA exposures.....	47
2.7.1 Regulatory challenges in REACH	47
2.7.2 Challenges for the assessment of NOAA releases and exposures	48
2.7.3 Demand for prospective approaches.....	49

3	Approaches for release and product life cycle modeling	51
3.1	Basic principles of release estimation	51
3.2	Methods for the release estimation of products	57
3.3	Life cycle thinking concept for estimating NOAA releases	61
3.4	Applied approach for the release estimation of NOAAs and life cycle modeling.....	62
3.5	Data uncertainties in prospective material flow modeling of NOAAs	64
4	Product application scenarios for prospective assessments	69
4.1	Product application and product design	69
4.2	Intended and non-intended usage of products	72
4.3	Prospective scenarios in context of future research.....	76
4.3.1	Scenario methodology, concepts, and their relation to future studies	76
4.3.2	Scenario building and scenario quality	79
4.4	NOAA release aspects and their consideration in product application scenarios.....	81
4.4.1	Matrix material	81
4.4.2	NOAA incorporation strategies and NOAA design	82
4.4.3	Application context.....	83
4.5	Summary of product application scenarios	85
5	Current and future product applications of iron oxide and silver nanoparticles	89
5.1	Approach for determining current applications on the market	90
5.2	Bibliometric analysis and applied approaches	91
5.2.1	Bibliometric analysis of scientific publications on IONPs and AgNPs.....	93
5.2.2	Identification and delineation of current research topics with VOSviewer	95
5.2.3	Patents and patent database analysis	96
5.3	Current product applications of iron oxide nanoparticles	99
5.4	Future product applications of iron oxide nanoparticles.....	101
5.4.1	Bibliometric analysis of scientific publications.....	101
5.4.2	Results.....	102
5.4.3	Patent database analysis for iron oxide nanoparticles	115
5.4.4	Results of the patent analysis for iron oxide nanoparticles	117
5.5	Current applications of silver nanoparticles	122
5.6	Future product applications of silver nanoparticles	125
5.6.1	Bibliometric analysis of scientific publications.....	125
5.6.2	Results.....	125
5.6.3	Patent database analysis of potential applications for silver nanoparticles.....	137
5.6.4	Results of the patent analysis for silver nanoparticles.....	138
5.7	Conclusion and selection of case studies	141

6	Case study: Clothing textiles with incorporated silver nanoparticles	147
6.1	Technology description and state-of-the-art	147
6.2	Life-cycle modeling and release factor determination	149
6.2.1	Defining release scenarios	149
6.2.2	Model structure and reference material flow	152
6.2.3	Production stage of textiles and silver nanoparticles	153
6.2.4	Usage	154
6.2.5	End-of-life	158
6.2.6	Predicted environmental concentrations	159
6.3	Results and discussion on the environmental releases and their influences.....	161
6.4	Release characteristics of clothing textiles with incorporated AgNPs.....	171
6.5	Summary of the case study on clothing textiles	172
7	Case Study: Magnetic resonance imaging based on iron oxide nanoparticles.....	175
7.1	Technology description and state-of-the-art.....	175
7.2	Life-cycle modeling and release factor determination	176
7.2.1	Defining release scenarios	176
7.2.2	Model structure and reference material flow	179
7.2.3	Production volume estimation and IONP synthesis.....	180
7.2.4	Use stage and end-of-life	181
7.2.5	Compartment description and PEC estimation.....	183
7.3	Results and discussion	184
7.4	Prospective release characteristics of IONP-based contrast agents	189
7.5	Summary of the case study on magnetic resonance imaging	190
8	Conclusion and outlook for future research	193
8.1	Results	193
8.2	Limitations	197
8.3	Outlook for future research.....	199
9	References	201
	Appreciation of student contribution	235
	Annex	237

Environmental Release of and Exposure to Iron Oxide
and Silver Nanoparticles
Prospective Estimations Based on Product Application
Scenarios
