INHALT

PLENUM

Propulsion for 2025 3

Worldwide harmonization of emission regulations – a dream never becomes reality? 5

Climate-neutral mobility 7

TEIL I – PKW-MOTORENTECHNOLOGIE

MOTORENKONZEPTE

CNG as ideal supplement to e-traction aiming at CO_2-neutral mobility? 15

Challenges facing future high performance combustion engines using Porsche Boxer engines as an example 29

Load point shifting for Diesel engines – potentials for passenger car and truck engine applications 43

LADUNGSWECHSEL UND VERBRENNUNG I

Selecting a suitable stroke/bore ratio when combining variable compression and Early Intake Valve Closure (EIVC) 65

Extreme lean gasoline technology – best efficiency and lowest emission powertrains 101

From glow tube to corona – challenges to the ignition systems of future SI engines 123

SYSTEME UND METHODEN

Experimental investigation of the cold start behavior of different coolant circuits for a waste heat recovery system and their influence on the engine 149

Method for the predictive calculation of mixed friction 169

Predictive diagnostics solutions beyond big data 185

EMISSIONEN

Optimized heat release rate for enhanced thermal efficiency under NO_x, noise and peak firing pressure constraints in light-duty Diesel engines 209

Impact analysis of fuels, operating fluids and combustion parameters: focus raw emission behavior 227

ELEKTRIFIZIERUNGSKONZEPTE

FEV ECObrid – a 48 V mild hybrid concept for passenger car Diesel engines 245

The tailored powertrain for 48 V – options for the gasoline engine – chance for future Diesel engines 261

Optimal hybrid gasoline engine – solutions for complex powertrains 297

LADUNGSWECHSEL UND VERBRENNUNG II

Model-based combustion chamber layout for passenger car Diesel engines 315

Targets and parameters for combustion system layout 341

48 VOLT IM SERIENEINSATZ

48 V in series application 359

Deployment of 48 V in Renault, current status and future outlook 363

TEIL II – NEUE UND ALTERNATIVE KRAFTSTOFFE

HEUTIGE KRAFTSTOFFKONZEPTE

Alternative fuels of today for sustainable mobility of tomorrow 381

Natural gas-Diesel dual fuel for commercial vehicle engines 391

Natural gas for cleaner mobility 409

ALTERNATIVE KRAFTSTOFFKONZEPTE

Energy chains and drive systems in the comparison of efficiency taking into account the air quality 431

Potentials of sustainable bio Diesel fuels to achieve mobility 433

Alternative fuels for commercial vehicles 435

NACHHALTIGE KRAFTSTOFFKONZEPTE

Recent results of the sootless Diesel fuel oxymethylene ether 439

Oxygenate fuel in a Diesel engine – Is a CI engine capable of lambda 1? 457

Production of fuels from hydropower and carbon dioxide from organic waste in Norway 473

KRAFTSTOFFE VON ÜBERMORGEN

Green hydrogen and downstream synthesis products – electricity-based fuels for the transportation sector 485

Capturing CO_2 from air 499

ZUKÜNFTIGE KRAFTSTOFFNUTZUNG

Sustainable designer fuels for Diesel and Otto fuels 515

A pragmatic approach to deep reduction in U.S. CO_2 emissions 517

TEIL III – NFZ-MOTORENTECHNOLOGIE

EMISSIONEN UND AGN-KONZEPTE

The challenges of an aftertreatment system for Stage V with SCR-F 541

Highly integrated exhaust gas aftertreatment systems in heavy-duty applications 543

Next steps towards EGR-only concept for medium-duty industrial engine 555

LADUNGSWECHSEL UND VERBRENNUNG

Further thermal efficiency increase of the Diesel combustion for commercial engines 575

Improving commercial vehicle emissions and fuel economy with engine temperature management using variable valve actuation 591

In-house developed turbochargers as key technology element for the development of Daimler heavy-duty engines 619

WÄRMEMANAGEMENT

Efficiency increase of the CV engine with a WHR turbine expander combined with a 48 V board net 637

Organic Rankine cycle turbine expander design, development, and 48 V mild hybrid system integration 655

Fuel saving potential of indirect charge air cooling for heavy-duty trucks 679

ELEKTRIFIZIERUNG

Range extender systems for electric drivetrains in medium-duty distribution vehicles 703

Development of a Diesel Power Module (DPM) for electrification of the extra mile 723

NEUE MOTOREN

The new Diesel and gas engines for the lower power range 747

The latest generation of Daimler's 10.7 l heavy-duty engine 765

PLENUM

The future of the internal combustion engine impacted by increasing electrification 781

Impact of CO_2 and ultra-low NO_x legislation on commercial vehicle base engine 783

Fuel: a key element for the mobility of tomorrow 809
