
Inhaltsverzeichnis

Automated driving functions for traffic flow models to assess the traffic situation

Andreas Kerschbaumer, Martin Rudigier, Michael Haberl und Bernhard Hintermayer

Assistance-on-demand – development of a speech-based, personalized left-turning assistant

Dr. Martin Heckmann, Dr. Heiko Wersing, Dennis Orth und Prof. Dr. Dorothea Kolossa

Evolution or revolution of the user experience through networked vehicles

Heiko Herchet und Johannes Barckmann

From research to mass production – using a versatile platform for developing new HAD software functions

Dr. Sebastian Ohl

Integrated Cockpit Computer

David Rabe und Matthias Rudolf

Automotive 3D reconstruction based on multi-pixel LED headlight systems

Christian Schneider, Maximilian Meyer und Tim Kunz

Legal framework for automated driving functions „Burden Or Vantage“?

Carsten Winkelbach, Folkert Jürgens und Heiko Ehrich

Evaluation of ADAS at low speed scenarios

Gerald-Alexander Beese und Helge Kiebach

Current research results on the effectiveness of driver assistance systems with increasing degree of automation

Marcel Borrack, Dr. Johann Gwehenberger, Julian Schatz und Philip Feig

Connected car – driver assistance sensors get connected

Stephan Stass, Dr. Hans-Jörg Mathony, Cristian Gavanescu, Dr. Christian Passmann und Dr. Dieter Hötzer

Use cases for automated driving commercial vehicles

Alexander-Cosmin Teleki, Dr. Maria Fritz und Dr. Matthias Kreimeyer

Driver assistance in the new BMW 5 Series – experience automation

Dr. Claus Dorrer, Reiner Friedrich und Dr. Philipp Reinisch

Scenario-based approach for developing ADAS and automated driving functions

Dr. Andreas Höfer und Martin Herrmann

A real-time capable multi-sensor model to validate ADAS in a virtual environment

Marius Feilhauer und Dr. Jürgen Häring

Virtual validation of automated driving functions using a construction site assistant as an example

André Rolfsmeier, Dr. Hagen Haupt und Dr. Karsten Krügel

Evasive Maneuver Assist (EMA) – enhanced vehicle safety using a combination of braking and steering

Stephan Kallenbach, Ralph-Carsten Lülfi und Dr. Klaus Plähn

Sensor-based learning – one step closer to autonomous driving

Dr. Nicole Beringer

Vehicle speed trajectory optimization under limits in time and spatial domains

Ziqi Ye, Thorsten Plum, Prof. Dr. Stefan Pischinger, Prof. Dr. Jakob Andert, Dr. Michael Stapelbroek und Dr. Jan Pflüger

Trusted execution environments in vehicles for secure driver assistance systems

Dr. Jens Köhler und Henry Förster

The impact of 5G on future driver assistance and autonomous driving systems

Sebastian Rettlinger, Dr. S. Butenweg und Prof. Dr. Dr. F. Fitzek

Big data re-simulations for autonomous driving using DaSense

Dr. Tobias Abthoff, Nicoletta John, Dr. Katharina Kreplin, Jonas Lorenz, Dr. Andreas Pawlik, Dr. Tilmann Piffel, Dr. Jose Villaveces und Adrian Villwock

Incorporating high fidelity physics into ADAS and autonomous vehicles simulation

Sandeep Sovani, Lee Johnson und Jacques Duysens

Development and test of a lane change prediction algorithm for automated driving

Christian Wissing, Dr. Karl-Heinz Glander, Dr. Carsten Haß, Dr. Till Nattermann und Prof. Dr. Prof. Dr. Torsten Bertram

In-vehicle validation of safety-critical sensor fusion ECUs with microprocessor technology

Dr. Heinz Tilsner und Burkhard Triess

Tagungsbericht

Markus Schöttle

Fahrerassistenzsysteme 2017

Von der Assistenz zum automatisierten Fahren - 3.

Internationale ATZ-Fachtagung Automatisiertes Fahren

Isermann, R. (Hrsg.)

2017, XIII, 420 S. 132 Abb., Softcover

ISBN: 978-3-658-19058-3
