Introduction	1

Part I: Concepts, Model Level and Risk Assessment..... 21

1. Introduction to Part I.....	23
2. Literature Synthesis, Theoretical Background and Research Focus.....	25
2.1. Complexity and Modern Financial Systems.....	25
2.2. Risk and Risk Management in the Financial World.....	32
2.2.1. Risk modeling.....	37
2.2.2. Value at Risk (VaR).....	41
2.2.3. Expected Shortfall (ES)	47
2.3. Systemic Risk Assessment.....	49
2.3.1. Tools primarily for regulators: Conditional Value at Risk (CoVaR) and Systemic Expected Shortfall (SES)	51
2.3.2. Extreme Value Theory (EVT).....	53
2.4. General Appraisal	55
2.4.1. Advantages of conventional risk models and measures.....	56
2.4.2. Weaknesses of conventional risk models and measures.....	58
2.5. Excursus: Benoît Mandelbrot's Plea for Fractal Methods.....	63
3. Research Questions.....	73
4. On an Adequate Concept of Risk and Systemic Risk in the Realm of Banking	75
4.1. The Notion of Risk	75
4.2. The Concept of Systemic Risk	91
5. On the Relevance of Systemic Risks for Banks	103
5.1. Why should Banks take account of, and try to deal with, Systemic Risks?.....	103
5.2. What are concrete Systemic Risk Scenarios for Banks?	115
6. Dealing with Quantitative Risk Management in Banking as a Complex Systems Problem	123
6.1. A Trichotomy of Scientific Problems – Warren Weaver's Scheme as a General Answer to How to Manage Complexity.....	128
6.1.1. Tackling disorganized complexity versus organized simplicity	128
6.1.2. Disorganized complexity and statistical techniques.....	131
6.1.3. Tackling organized complexity: open questions remain.....	134
6.1.4. Synopsis.....	136
6.2. Weaver's Taxonomy Revisited: Attempts of Clarification, Extension and Refinement ..	139
6.2.1. Approaches towards the operationalization of Weaver's concept of organized complexity	139
6.2.2. The bigger picture of complexity and randomness.....	142

6.3.	Organized Complexity, Financial Systems and Assessing Extreme and Systemic Risks	152
6.3.1.	On the level of structures	154
6.3.2.	On the level of events.....	155
6.4.	A Tentative Bottom Line	157
7.	The Fundamental Inadequacy of Probability Theory as a Foundation for Modeling Systemic and Extreme Risk in a Banking Context.....	159
7.1.	Philosophical Roots of the Problem of Induction: some Preliminaries.....	161
7.2.	Probability Theory in a Nutshell, its Embeddedness and its Applications.....	164
7.3.	The Central Argument against using Probability Theory for Financial Risk Management	175
7.4.	Linking the Central Argument with the Current State of the Literature (IIIa-c))	183
8.	Conclusion to Part I	187
8.1.	Résumé.....	188
8.2.	Outlook: Explanatory Models for In-House Risk Management in Banking	191
Part II: The Transition to the Decision Level, Risk Assessment and Management.....		195
9.	Introduction to Part II	197
10.	The Critical Turn: The Renaissance of Practical Wisdom	199
11.	Scenario Planning in a Nutshell and its Role in Risk Management in Banking	205
12.	Strengths and Weaknesses of Scenario Planning as a Risk Management Tool	213
13.	Deriving Lessons for Rethinking the Approach to Assessing Extreme and Systemic Risks	219
Part III: In Search of a New Paradigm:		
The Third Way as a Road to Logic-Based Risk Modeling (LBR)		223
14.	Introduction to Part III.....	225
15.	Theoretical Foundations of a Logic-Based Risk Modeling (LBR) Approach	231
15.1.	A less Restrictive Axiomatization.....	231
15.2.	Non-Probabilistic Models of Uncertainty	239
15.3.	Ranking Theory	243
15.4.	Syntax of a Language for Describing Contracts and Correlations.....	246
15.5.	Semantics: Financial Contracts as Uncertain Sequences in a Non-Probabilistic Risk Model Context.....	252
15.5.1.	Uncertain sequences by example	253
15.5.2.	From contract value to risk	257
15.5.3.	Formalization of the approach.....	258
15.5.4.	Concrete instantiations of uncertainty monads: ranking functions	265
15.5.5.	Evaluating risk models.....	270
15.6.	Model Interpretation and Output: An Exact, Explanatory Scenario Planning Method.....	275
16.	Case Study: LTCM and Extreme Risk.....	279
16.1.	Example Trade.....	280
16.2.	A Fixed Income Portfolio in LBR.....	281
16.3.	Analysis	284
16.3.1.	Overview	285
16.3.2.	Zoom and filter	286
16.3.3.	Details on demand.....	288
16.4.	Discussion and Conclusion	288

17. Managerial Implications 291

18. Scales of Measurement and Qualitative Probabilities 297

19. Model Validation..... 303

**Part IV: Meta Level: Thinking about Thinking and Practices – What it Means to Reach
Effective Risk Management Decisions..... 321**

20. Introduction to Part IV as Overall Conclusion..... 323

21. Escaping the Traps for Logicians:
 Towards Decision-Making Competency in Risk Management 325

22. Final Remarks and a Path for Future Research 339
