Table of Contents

Preface V
Acknowledgements VII

1. Introduction 1
1.1 Overture 1
1.2 Motivation 1
1.3 Background and purpose of study 3
1.4 Aims of research 6

2. Theoretical framework 9
2.1 Spatial ability 9
2.1.1 Definitions of spatial ability and approaches to its research 10
2.1.2 Cognitive processes in solving spatial tasks 12
2.1.3 Selected spatial ability models 17
2.1.4 Spatial abilities in German mathematics curriculum and classroom 22
2.1.5 Strategies for solving spatial tasks 23
2.1.6 Sex differences in spatial ability performance 28
2.1.7 Summary: Spatial ability 30
2.2 Language in mathematics classroom 31
2.2.1 Definition of the notion of language 32
2.2.2 Language and thinking 34
2.2.3 The functions of language 36
2.2.4 Levels of language acquisition 37
2.2.5 Metaphors in mathematics classroom 40
2.2.6 Roles of language in German mathematics curriculum and classroom 42
2.2.7 Summary: Language in mathematics classroom 44
2.3 Interplay of spatial ability and language 45
2.3.1 Spatial language 46
2.3.2 Spatial task strategies and language 54
2.3.3 Summary: Interplay of language and spatial ability 56
2.4 Representations of mathematical knowledge 56
2.4.1 Sfard's dual nature of mathematical conceptions 57
2.4.2 Bruner's modes of representation 58
2.4.3 Summary: Representations of mathematical knowledge 60

3. Methodology 61
3.1 Research questions 61
3.2 Research paradigm 63
3.3 Research design process 66
3.4 Research method 67
3.4.1 Reconstruction method 68
3.4.2 Design principles of the reconstruction method 70
3.4.3 Limitations of the reconstruction method 76

4. Design and Implementation 77
4.1 Pilot study 77
4.1.1 Aims of the pilot study 77
4.1.2 Design of the pilot study 78
4.1.3 Sampling and implementation 81
4.1.4 Results and consequences of pilot study 81
4.2 Design of main study 85
4.2.1 Reconstruction method in the main study 86
4.2.2 Task design 87
4.2.3 Sampling 97
4.2.4 Quality criteria 108
4.2.5 Implementation of main study 113
4.2.6 Data analysis 116

5. Results and discussion from the inductive data analyses 125
5.1 Description of the identified strategies 125
5.1.1 Spatial metaphors 125
5.1.2 Object break-down strategy 142
5.1.3 Assembling strategy 145
5.1.4 Rotation strategy 147
5.1.5 Cubes controlling strategy 149
5.1.6 Structure controlling strategy 150
5.1.7 Discussion of the identified strategies and review of literature 151
5.2 Description of identified obstacles 156
5.2.1 Spatial metaphors as obstacles 158
5.2.2 Describing spatial relations 160
5.2.3 Verbalising rotation 164
5.2.4 Dimension reduction 169

5.2.5 Space disorientation 171
5.2.6 Discussion of the identified obstacles 172

6. Results and discussion from the deductive data analyses 175
6.1 Use of identified strategies under consideration of influencing factors..175
6.1.1 Hypotheses 176
6.1.2 Language proficiency as a possible influencing factor 178
6.1.3 Spatial abilities as a possibile influencing factor 181
6.1.4 Sex as a possible influencing factor 183
6.1.5 Discussion of the use of identified strategies 184
6.2 Deductive approaches for structural analysis of spatial language and influencing factors 187
6.2.1 Metaphoric-based approach 188
6.2.2 Linguistic-based approach....195
6.2.3 Content-based approach 201
6.2.4 Conception-based approach 209
6.3 Discussion of the results from the structural analyses of spatial language....211

7. Summary and Conclusion 215
7.1 Synthesis of the results....215
7.2 Implications....222
7.3 Concluding remarks 224
