Part I Fluid Mechanics

1 The Equations of Change in Fluid Mechanics and Their Analytical Solutions	3
1.1 The Equations of Change in Fluid Mechanics	3
1.2 Exact Solutions of the Equations of Change	5
1.2.1 Hydraulically Developed Flow	6
1.2.2 Further Exact Solutions	7
1.3 Approaches by Solving Simplified Equations of Change.	7
1.3.1 Slender Flow Fields with Negligible Inertial Influence—The Lubrication Approximation	8
1.3.2 Slender Flow Fields at High Reynolds Number—The Boundary-Layer Approximation	11
1.3.3 Quasi One-Dimensional Flow	13
1.3.4 Quasi One-Dimensional Flow in a Slender Liquid Jet	18
1.3.5 Quasi One-Dimensional Flow in a Boundary Layer.	20
References	23
2 The Equation for the Stokesian Stream Function and Its Solutions	25
2.1 The Equation for the Stream Function in Cartesian Coordinates	25
2.1.1 Linear, Unsteady Flow.	27
2.1.2 Linear, Steady Flow	31
2.1.3 Nonlinear, Steady Flow with Constant Pressure	32
2.2 The Equation for the Stream Function in Cylindrical Coordinates	34
2.2.1 Polar, Linear, Unsteady Flow	35
2.2.2 Polar, Linear, Steady Flow	36
2.2.3 Polar, Nonlinear, Steady Flow	37

2.2.4	Axisymmetric, Linear, Unsteady Flow	38
2.2.5	Axisymmetric, Linear, Steady Flow	42
2.2.6	Axisymmetric, Nonlinear, Steady Flow with Constant Pressure	43
2.3	The Equation for the Stream Function in Spherical Coordinates	45
2.3.1	Linear, Unsteady Flow	46
2.3.2	Linear, Steady Flow	47
2.3.3	Nonlinear, Steady Flow with Constant Pressure	48
	References	49
3	Laminar Two-Dimensional Flow	51
3.1	Steady Flow	51
3.1.1	Channel and Pipe Flows	51
3.1.2	Flow Between Coaxial Spinning Cylinders	56
3.1.3	Flow Outside a Spinning Sphere	57
3.1.4	Duct Flow with Injection and Suction Through the Walls	59
3.2	Unsteady Flow	62
3.2.1	The Two Stokesian Problems	62
3.2.2	Flow Outside a Cylinder in Oscillatory Spinning Motion	67
3.2.3	Starting and Fading Plane Couette Flow	69
3.2.4	Starting and Fading Channel and Pipe Flows	72
3.2.5	Pulsating Pipe Flow	78
3.2.6	Onset of Flow Between Two Concentric Spherical Shells	80
	References	84
4	Lubrication Flow	85
4.1	Lubrication Approximation	85
4.2	Plane Slide Bearing	88
4.3	Pressure-Driven Flow Through a Plane Gap	90
4.4	Cylindrical Bearing	91
4.5	Pressure-Driven Flow Through a Cylindrical Gap	94
4.6	Pressure-Driven Flow Through a Spherical Gap	96
4.7	Wire Coating—Extended Lubrication Theory	98
	References	100
5	Boundary-Layer Flow	101
5.1	Laminar Flow Along a Flat Plate	101
5.2	Flow Along a Slender Body of Revolution	105
5.3	Plane Submerged Free Jet	108
5.4	Axisymmetric Submerged Free Jet	112

5.5	Plane Free Shear Layer	118
5.6	Wake Behind a Flat Plate	120
	References	122
6	Flows with Interfaces	123
6.1	Linear Temporal Instability of a Plane Liquid Sheet	123
6.2	Linear Temporal Capillary Instability of a Liquid Jet	130
6.3	Linear Spatial Capillary Instability of a Liquid Jet	140
6.4	Linear Oscillations of Drops and Bubbles	142
6.4.1	Linear Shape Oscillations of a Viscoelastic Drop	144
6.4.2	Linear Shape Oscillations of a Bubble in a Viscoelastic Liquid	154
6.5	Liquid Films from Drop Impact on Solid Substrates	165
6.6	Steady Creeping Flow Around a Spherical Particle	166
6.6.1	Hadamard–Rybczynski Flow Around a Fluid Spherical Particle	167
6.6.2	Stokes Flow Around a Solid Spherical Particle	170
	References	172
 Part II Heat and Mass Transfer		
7	The Equations of Change for Heat and Mass Transfer and Their Analytical Solutions	177
7.1	The Thermal Energy Equation	177
7.2	Concepts for Simplifying the Thermal Energy Equation	178
7.3	The Equations of Change for Mass Transport	180
7.3.1	The Description of Fluid Mixtures	180
7.3.2	The Continuity Equation for a Mixture Component	182
7.4	Concepts for Simplifying the Continuity Equations	187
	References	188
8	Heat Transfer	189
8.1	Heat Conduction	189
8.1.1	Steady Heat Conduction	190
8.1.2	Unsteady Heat Conduction—Early After Start or in Infinite Systems	197
8.1.3	Unsteady Heat Conduction—Long After Start in Finite Systems	200
8.2	Heat Transfer with Lumped Capacitances of Simple Geometries	221
8.3	Convective Heat Transport—Forced Convection	222
8.3.1	Heat Transfer Across a Flat-Plate Surface in Parallel Flow	223
8.3.2	Laminar Pipe Flow with Heat Transfer	227

8.4	Convective Heat Transport—Natural Convection	229
8.4.1	Natural Convection Along a Vertical Flat Plate.	231
8.4.2	Natural Convection Between Two Vertical Flat Plates	235
	References	237
9	Mass Transfer	239
9.1	Steady Diffusive Mass Transport—Equimolar and Stefan Flow	239
9.2	Diffusive Transfer Across Spherical, Spheroidal and Hyperboloidal Interfaces.	241
9.2.1	Introduction	241
9.2.2	The Sherwood Number of Equimolar Diffusion for a Sphere	241
9.2.3	The Sherwood Number of Equimolar Diffusion on Spheroidal and Hyperboloidal Surfaces	243
9.3	Convective Mass Transfer from Flat Plate Surfaces	252
9.4	Liquid Phase Analysis in the Convective Drying of Drops	256
9.4.1	Introduction	256
9.4.2	Mathematical Description.	257
9.4.3	Definition of the Problem.	257
9.4.4	Analytical Solution of the Problem	261
9.4.5	Evaluation of the Equations and Example Calculations	265
	References	269
 Part III Appendices		
	Appendix A: The Equations of Change in Transport Processes	273
	Appendix B: Basic Vector Analytical Operations	283
	Appendix C: Special Functions of Mathematical Physics.	287
	Index	299
