Contents

1 Introduction 1
1.1 Introduction 1

2 Phenomenological Properties and Constitutive Equations of Transport Processes 5
2.1 Density 5
2.2 Mixture Density, Concentration, Mass Fraction and Gas Law 7
2.3 Temperature 8
2.4 Pressure 9
2.5 Viscosity in Ideal Gases 10
2.6 Viscosity in Real Gases 12
2.7 Viscosity in Fluids 15
2.8 Typical Viscosity Variations 16
2.9 Viscosity in Gas Mixtures 17
2.10 Viscous Stresses in Three Dimensions 17
2.11 Viscosity and Shear Stress in Turbulent Flow 19
2.12 Molecular Thermal Conductivity in Gases 21
2.13 Thermal Conductivity in Gas Mixtures 25
2.14 Thermal Conductivity in Liquids and Solids 25
2.15 Thermal Conductivity and Diffusivity in Turbulent Flow 26
2.16 Mass Diffusivity in Gases 27
2.17 Mass Diffusivity in Gas Mixtures 30
2.18 Mass Diffusivity in Liquids 30
2.19 Mass Diffusivity in Solids 31
2.20 Diffusivity in Turbulent Flow 32
2.21 Specific Heat 33
2.22 Compressibility of Gas and Liquid 34
2.23 Corollary of the Elements of Transport Processes 35

3 Conservation of a Scalar Extensive in Integral Form 39
3.1 The Eulerian Shell-Balance Equation 39
3.2 Eulerian Balance Equation with Lagrangean Internal Transport 40
3.3 Comparison of the Eulerian and the New Eulerian–Lagrangean Forms 44

4 Conservation of a Scalar Extensive in Differential Form 47
4.1 Differential Species Balance in a Finite Cell 47
4.2 Differential Cell Balances with Substance Transport and Bulk Flow Conservation 49
4.3 Directional, off-Centered Differential Substance Balance Equations 51

5 Conservation of a Scalar Extensive in a State-Flux, Space-Time, Finite-Volume Cell 57
5.1 State-Flux, Finite-Volume Cell for Unit Courant Number 57
5.2 Multiple-Level, State-Flux, Finite-Volume Cell with Arbitrary Courant Number 61
5.3 State-Flux, Space-Time Finite-Volume Block Model with Arbitrary Courant Number 66
5.4 Extended Applications of the State-Flux, Space-Time Finite-Volume Block Model 72
5.5 Synopsis of the SFST Substance Balance Formulation 76

6 Conservation of Energy in Integral, Differential, and State-Flux Forms 79
6.1 Integral Balance Equation for Energy 79
6.2 Separation of the Mechanical and Thermal Components in the Integral Balance Equation for Energy 90
6.2.1 The Case of Zero Stagnant Volume 91
6.2.2 The Case of Nonzero Stagnant Volume 95

7 Transport Models for Mechanical Energy 105
7.1 Differential Form of Mechanical Energy Balance in a Finite Cell for Unit Courant Number 105
7.2 State-Flux, Finite-Volume, Mechanical Energy Transport Model for a Network Branch 108
7.3 State-Flux, Finite-Volume, Mechanical Energy Transport Model for a Network Junction 119
7.3.1 Mass Balance in a Junction Node 119
7.3.2 Mechanical Energy Balance for a Junction Node 122
7.4 State-Flux Network Model for Mechanical Energy Transport in Steady State 133
7.5 State-Flux Network Model for Time Dependent Mechanical Energy Transport 140

7.6 Approximate, Eulerian, State-Flux Network Model for Time Dependent Mechanical Energy Transport. 146
7.7 Synopsis of the Mechanical Energy Balance Equations 147

8 Transport Models for Thermal Energy 149
8.1 Differential Form of Thermal Energy Transport in a Finite Cell for Unit Courant Number. 149
8.2 State-Flux, Finite Volume, Thermal Energy Transport Model for a Network Branch 151
8.3 State-Flux, Finite Volume, Thermal Energy Transport Model for a Network Junction 157
8.4 State-Flux Network Model for Thermal Energy Transport in Steady State 158
8.5 State-Flux Network Model for Time-Dependent Thermal Energy Transport 164
8.6 Approximate, Eulerian, State-Flux Network Model for Time-Dependent Thermal Energy Transport 168

9 Conservation of Momentum in Integral, Differential, and State-Flux Forms 171
9.1 Integral Balance Equation for Momentum 171
9.2 SF and Differential Forms of Momentum Balance in a Finite Cell for Unit Courant Number. 177
9.3 Synopsis of the Momentum Balance Equations 180

10 Conservation of Diffusive Mass Component in State-Flux Forms. 181
10.1 Differential Form of Component Mass Diffusion in a Finite Cell for Unit Courant Number. 181
10.2 State-Flux, Finite-Volume, Diffusion Transport Model for a Component in a Network Branch. 182
10.3 State-Flux, Finite-Volume, Component Mass Transport Model for a Network Junction 186
10.4 State-Flux Network Model for Component Mass Transport in Steady State 188
10.5 State-Flux Network Model for Time-Dependent Component Transport 192
10.6 Approximate, Eulerian, State-Flux Network Model for Time-Dependent Component Mass Transport 196

11 Synopsis and Examples of State-Flux Transport Network Models 197
11.1 Synopsis of the General State-Flux Transport Network Models 197
11.2 Advection Mass Flow Network Examples 199

11.3 Advection Mass Flow with Component Diffusion Transport Examples 213
11.4 Coupled Advection, Heat Transport, and Component Diffusion Network Example 216

Appendix: Network Model Elements 233
