

Contents

- 1 Introduction 1**
 - 1.1 Background 1
 - 1.2 Modeling Approaches in HVAC Field 2
 - 1.2.1 Physics-Based Modeling Approach 2
 - 1.2.2 Data-Driven Modeling Approach. 7
 - 1.2.3 Hybrid Modeling Approach. 10
 - 1.3 Proposed Methods 11
 - 1.3.1 State-Space Modeling 11
 - 1.3.2 Graph-Theory Modeling 11
 - 1.3.3 Combined Forecasting Modeling. 12
 - 1.3.4 Decomposition–Coordination Algorithm for Global Optimization Model. 13
 - 1.3.5 Virtual Calibration for HVAC Sensors 14
 - 1.3.6 Model-Based Predictive Control (MPC) 17
 - 1.4 Organization of This Book 18
 - References. 21
- 2 Component Modeling with State-Space Method 29**
 - 2.1 Basic Knowledge About State-Space Modeling Method. 29
 - 2.2 Modeling for HVAC Components 30
 - 2.2.1 Water-to-Air Heat Exchanger 30
 - 2.2.2 Chiller 44
 - 2.2.3 Cooling Tower 60
 - 2.2.4 Duct (Pipe) and Fan (Pump) 71
 - 2.2.5 Air-Conditioned Room Modeling 85
 - 2.3 Modeling for HVAC System 96
 - 2.3.1 Component Model Connection 96
 - 2.3.2 State-Space Representation for HVAC System 100
 - 2.3.3 Case Study 103
 - References. 108

3	Dynamic Simulations with State-Space Models	109
3.1	On Water-to-Air Surface Heat Exchanger	109
3.1.1	Subjected to Different Perturbations	109
3.1.2	For Different Initial Conditions	113
3.2	On Chiller	124
3.2.1	Subjected to Different Perturbations	124
3.2.2	For Different Initial Conditions	128
3.3	On Cooling Tower	141
3.3.1	Subjected to Different Perturbations	141
3.3.2	For Different Initial Conditions	143
3.4	On Duct and Pipe	147
3.4.1	On Straight-Through Duct	147
3.4.2	On Straight-Through Pipe	150
3.5	On Air-Conditioned Room	152
3.5.1	Basic Conditions	152
3.5.2	Subjected to Different Perturbations	152
4	Graph-Theory Modeling and Structure-Matrix Analysis	159
4.1	Graph-Theory Modeling for HVAC Component State-Space Models	159
4.1.1	Fundamental Rules	159
4.1.2	Case Study	160
4.2	Graph-Theory Modeling for HVAC System	172
4.2.1	Basic Method	172
4.2.2	Case Study	173
4.3	Structure-Matrix Analysis Approach	176
4.3.1	Model Structural Matrix	176
4.3.2	Reachability Analysis of Model Input–Output	176
4.3.3	Controllability/Observability Analysis of Model	178
4.3.4	Case Study	180
	References	188
5	Virtual Measurement Modeling	189
5.1	Virtual Calibration	189
5.1.1	Conventional Calibration	189
5.1.2	Methodology of Virtual In Situ Calibration	192
5.1.3	Case Study	200
5.2	Virtual Sensing	203
5.2.1	Development Methodology for Virtual Sensing	204
5.2.2	Case Study	207
5.2.3	Model Development	210
	References	218

6	Control Design Based on State-Space Model	221
6.1	Model-Based Predictive Control (MPC)	221
6.1.1	Introduction of MPC	221
6.1.2	MPC in Broad Definition	222
6.2	Applications of MPC in HVAC Field	229
6.2.1	Control of a Hybrid Ventilation Unit	229
6.2.2	Control of Space Thermal Conditioning	266
6.3	State-Space Feedback Control System Design	285
6.3.1	Basic Principle	285
6.3.2	Control System Design for Water-to-Air Heat Exchanger	287
6.3.3	MATLAB Simulation of the Control System	289
6.3.4	Control System Design for Refrigeration System	291
	References	295
7	Combined Forecasting Models for Air-Conditioning Load Prediction	297
7.1	Typical Methods	297
7.1.1	MLR Modeling	297
7.1.2	ARIMA Modeling	299
7.1.3	GM Modeling	301
7.1.4	ANN Modeling	302
7.2	Combined Forecasting Model Based on Analytic Hierarchy Process (AHP)	304
7.2.1	Principles of the Combined Forecasting Method	304
7.2.2	Determining Weights by Analytic Hierarchy Process (AHP)	305
7.2.3	Combined Forecasting Model for Hourly Cooling Load Prediction Using AHP	308
7.3	Forecasting Model Based on Neural Network and Combined Residual Error Correction	316
7.3.1	Model Development	316
7.3.2	Case Study	323
	References	327
8	Energy Analysis Model for HVAC System	329
8.1	Energy Models for HVAC Components	329
8.1.1	Chiller	329
8.1.2	Boiler	331
8.1.3	Pump and Fan	332
8.1.4	Cooling Tower	332
8.1.5	Water-to-Air Heat Exchanger	333
8.2	Energy-Saving Analysis on VAV Air-Conditioning System	335

8.2.1	Evaluation Program for Energy Saving of VAV System.	336
8.2.2	Case Study	339
8.3	Energy Analysis on VAV Air-Conditioning System with Different Air-Side Economizers	346
8.3.1	Scheme for Air Economizer Cycle [27].	347
8.3.2	Case Study	351
	References.	356
9	Optimal Control of HVAC System Aiming at Energy Conservation	359
9.1	Air-Side Synergic Control	359
9.1.1	Background and Basic Idea	359
9.1.2	Mathematic Deduction of Synergic Control Model	361
9.1.3	Control Logic Details	373
9.1.4	Case Study	376
9.2	Global Optimization Control.	387
9.2.1	Model Development	387
9.2.2	Decomposition–Coordination Algorithm for Model Solution.	393
9.2.3	Case Study	399
	Appendix	413
	References.	420
10	Modeling and Control Strategies for VAV Systems	423
10.1	Background and Research Status	423
10.2	Modular Modeling with Simulink Tool	429
10.3	Model Library for Components of VAV System	432
10.3.1	VAV Terminal Unit	432
10.3.2	Variable Speed Fan	434
10.3.3	Air Ducts.	436
10.3.4	Other Local Resistance Components	444
10.3.5	Application of Component Model Library: Case Study	445
10.4	Control Strategies for VAV System	449
10.4.1	Constant Static Pressure Method	450
10.4.2	Total Air Volume Method.	453
10.4.3	Variable Static Pressure Method Based on Trim-and-Respond Logic	458
10.5	Control Sequences for VAV System with Different Terminal Units	464
10.5.1	For Cooling-Only Terminal Unit.	464
10.5.2	For Reheat Terminal Unit	465
10.5.3	For Series Fan-Powered Terminal Unit	467

- 10.6 Test Script for VAV Control Study 468
 - 10.6.1 Preparation 468
 - 10.6.2 General Inspection of Air-Handling and Distribution System. 469
 - 10.6.3 Trend Data Review 473
