

Contents

- 1 Introduction** 1
 - 1.1 Flight Data Recorder System 1
 - 1.1.1 Overview 1
 - 1.1.2 Developments 2
 - 1.1.3 Military Applications 10
 - 1.2 Application Research for Flight Data 11
 - 1.2.1 Basic Concepts 11
 - 1.2.2 Research Status 12
 - 1.3 Research Domain and Main Contents 16
- 2 Preprocessing of Flight Data** 19
 - 2.1 Support Degree-Based Amnesic Fusion Filtering Method for Flight Data 19
 - 2.1.1 Unified Error Model of Flight Data 19
 - 2.1.2 Support Degree-Based Amnesic Fusion Filtering Algorithm 21
 - 2.1.3 Application and Conclusion 25
 - 2.2 Missing Flight Data Filling Method Based on Comprehensive Weighting Optimization 30
 - 2.2.1 Modified Neural Network Model Based on Mixed Algorithm 30
 - 2.2.2 Polynomial Fitting Model Based on Least Square Method 31
 - 2.2.3 Comprehensive Weighting Method to Fill the Missing Values 33
 - 2.2.4 Simulated Analysis and Conclusion 34

2.3	Flight Data Extension Method Based on Virtual Sensor Technologies	35
2.3.1	Overview of Virtual Sensor Technologies.	35
2.3.2	Virtual Flight Data Extension Based on Mathematical Model	36
2.3.3	Virtual Flight Data Extension Based on BP Network	37
2.4	Self-expanding Genetic Algorithm for Feature Selection in Monitoring Flight Data Capacity	41
2.4.1	Feature Selection and Genetic Algorithm	42
2.4.2	Self-expanding Genetic Algorithm	44
2.4.3	Case Verification and Assessment.	47
2.5	Chaotic Property Analysis of Flight Data	49
2.5.1	Mathematical Description of Phase Space Reconstruction of the Chaotic Series.	50
2.5.2	Analysis and Verification of Chaotic Property	56
3	Typical Time Series Analysis of Flight Data Based on ARMA Model	65
3.1	Theory of ARMA Model	65
3.1.1	Mathematical Model	66
3.1.2	Modeling Process	67
3.1.3	Estimation of Model Parameters	70
3.1.4	Model Applicability Test.	73
3.1.5	Optimum Prediction	74
3.2	Trend of Parameter Monitoring Method Based on AR Model	75
3.2.1	Description for Steady State of Aircraft	76
3.2.2	Extraction of Monitoring Parameters Based on Rule Reasoning Machine.	76
3.2.3	Monitoring Method of Mean-Value and Range Based on AR Model	80
3.2.4	Case Study and Effect Assessment	81
4	Similarity Search for Flight Data	87
4.1	The Method of Similarity Analysis of Time Series.	87
4.1.1	Overview	88
4.1.2	Time Series Dimension Reduction	89
4.1.3	Similarity Measurement of Time Series	100
4.2	Similarity Search Method in Time Series Based on Slope Distance	109
4.2.1	Slope Set Representation of Time Series.	109
4.2.2	Slope Distance Measurement for Time Series.	110
4.2.3	Verification on Clustering of Flight Data Based on Slope Distance.	111

4.3	Similarity Search Method in Time Series Based on Included Angle Distance	114
4.3.1	Representation of Included Angle Set for Time Series	114
4.3.2	Included Angle Distance Measurement for Time Series . . .	116
4.3.3	Verification on Clustering of Time Series Based on Included Angle Distance	118
4.4	Similarity Search Method in Time Series Based on Curvature Distance	121
4.4.1	Data Preprocessing	121
4.4.2	Representation of Curvature Set for Time Series.	123
4.4.3	Curvature Distance Measurement for Time Series.	125
4.4.4	Verification on Clustering of Flight Data Based on Curvature.	127
4.5	Multivariable Flight Data Similarity Search Method Including Changing Step to Set Data in Different Bins	132
4.5.1	Piecewise Linear Representation for Time Series	132
4.5.2	Indexing Tag Based on Changing Step to Set Data in Different Bins	133
4.5.3	Similarity Search Method Including Changing Step to Set Data in Different Bins.	135
4.5.4	Verification on Clustering of Multivariable Flight Data Based on Similarity Search Method Including Changing Step to Set Data in Different Bins.	136
4.6	Multivariable Flight Data Similarity Search Method Based on QR decomposition of Correlation Coefficient Matrix . . .	142
4.6.1	Representation of Matrix and Plot for Multivariable Time Series	142
4.6.2	Correlative Representation of Matrix for Multivariable Time Series.	143
4.6.3	QR Distance Measurement for Multivariable Time Series.	144
4.6.4	Verification on Clustering of Multivariable Flight Data Based on QR Distance	147
5	Condition Monitoring and Trend Prediction Based on Flight Data.	153
5.1	Clustering Methods Based on Flexible-Size Grid for Airplane Equipment	153
5.1.1	Clustering Methods of Multivariate Data	154
5.1.2	Clustering Method Based on Density Function.	155
5.1.3	Shrinking Clustering Method Based on Flexible-Size Grid	157
5.1.4	Monitoring Examples of Flight Equipment Status Shrinking Clustering	165

5.2	Mutability Fault Diagnosis Arithmetic	
	Based on Expert System	170
5.2.1	Theory of Expert System	171
5.2.2	Main Functions of the Aircraft Fault Diagnosing Expert System	175
5.2.3	Implementation and Evaluation	177
5.3	Gradual Fault Diagnosis Arithmetic Based on Dynamic Principle Component Analysis	179
5.3.1	Overview of Principle Component Analysis	179
5.3.2	Dynamic Principle Component Analysis Method	181
5.3.3	Fault Diagnosis Arithmetic Based on Dynamic Principle Component Analysis	182
5.3.4	Simulation Evaluation of Fault Diagnosis	184
5.4	Engine Performance Parameter Prediction	
	Based on WLS-SVM	187
5.4.1	Basic Theory of SVM	187
5.4.2	The Weighted Least Square Support Vector Machine Arithmetic (WLS-SVM)	192
5.4.3	WLS-SVM Parametric Prediction Model	195
5.4.4	Application Example	198
5.5	Engine Performance Data Prediction on the Basis of Chaotic Sequence	206
5.5.1	Chaos and Chaotic Sequence	207
5.5.2	Prediction Model	208
5.5.3	Application of the Model	209
6	Design and Implementation of Flight Data Mining System	215
6.1	Data Mining System	215
6.2	Flight Data Warehouse Modeling	217
6.2.1	The Special Characteristics of Flight Data	217
6.2.2	Mining Goals of Flight Data	218
6.2.3	Flight Data Warehouse Modeling	219
6.3	Design and Development of Prototype System	220
6.3.1	General Design	220
6.3.2	Data Flow	222
6.3.3	Working Process	222
6.3.4	Main Functions	224
6.4	Summary	230
	References	233

Time Series Analysis Methods and Applications for
Flight Data

Zhang, J.; Zhang, P.

2017, X, 240 p. 161 illus., 35 illus. in color., Hardcover
