

Contents

1	Introduction	1
1.1	Background	1
1.1.1	Space Debris Problem	1
1.1.2	Active Debris Removal	3
1.1.3	Space Net Capture and Deorbiting	6
1.2	Related Project Research	9
1.2.1	Tethered Satellite	9
1.2.2	Space Nets	10
1.3	Related Technology Progress	12
1.3.1	Tether Dynamics	12
1.3.2	Dynamics and Control of Nonrotating Space Net	13
1.3.3	Dynamics and Control of Rotating Space Net	14
1.3.4	Dynamics and Control of Tethered Combination Deorbiting	15
1.4	Outline	17
2	Cable Dynamics Elements	19
2.1	Geometric Nonlinear Characteristics of Cable	19
2.2	Continuous Model of Cable	21
2.2.1	General Dynamics Equation of Space Cable Coordinate System	21
2.2.2	Dynamics of Continuous Space Cable	22
2.2.3	Simplification for Dynamics of Continuous Space Cable	24
2.2.4	Reflection and Transmission of Stress Wave Between Cable Sections	25
2.2.5	Numerical Solution of Stress Waves with Characteristic Line	30
2.3	Spring Damper Model of Cable	36
2.3.1	Description of Model	36
2.3.2	Computation of Internal Force	38

2.3.3	Computation of External Force	39
2.3.4	System Dynamics	43
2.4	Multi-rigid-body Model of Cable	44
2.4.1	Description of Model	44
2.4.2	Recurrence of Constraint Force	46
2.5	Conclusion	48
3	Dynamics of Space Nets	49
3.1	Introduction	49
3.1.1	System Description	50
3.1.2	Material.	51
3.2	Modeling Methodology	52
3.2.1	Basic Assumption	53
3.2.2	Finite Element Model	54
3.2.3	Forces on Tether Node	55
3.2.4	Equation of Motion.	56
3.3	Ejection Mode Analysis	56
3.3.1	Multi-point Ejection Mode	56
3.3.2	Evaluation Index of Space Nets	57
3.3.3	Numerical Simulation	58
3.4	Ejection Parametric Sensitivity Analysis.	61
3.4.1	Orthogonal Experimental Method	61
3.4.2	Ejection Parameter Analysis	62
3.5	Multi-objective Optimization	63
3.5.1	MOP of Space Net	63
3.5.2	Framework of MOEA/D	66
3.5.3	Optimization Result.	67
4	Simulation of Space Net Capture Process	69
4.1	Introduction	69
4.1.1	Systematic Simulation Model	69
4.1.2	Element Types and Selection	73
4.1.3	Meshing of Finite Element	75
4.1.4	Selection of Contact Type.	76
4.2	Deploying Simulation Analysis.	76
4.2.1	Simulation Result	76
4.2.2	Result Analysis	76
4.3	Impact Simulation Analysis	86
4.3.1	Frontal Impact Analysis	89
4.3.2	Oblique Impact Analysis.	95
4.3.3	Other Capture Locations	98
4.4	Net-Closing Simulation Analysis	101
4.4.1	Simulation Result	101
4.4.2	Result Analysis	101
4.5	Conclusion	109

5	Deployment Dynamics of Rotating Space Net	111
5.1	Introduction	111
5.2	Rotating Space Net System	112
5.2.1	System Description	112
5.2.2	Folding and Deploying Patterns of Rotating Net	112
5.3	Dynamic Model of Rotating Space Net	114
5.3.1	Dynamic Model of First Step	114
5.3.2	Dynamic Model of Second Step	119
5.4	Deployment Dynamics Analysis of Rotating Space Net	121
5.4.1	Deployment Control Law	121
5.4.2	Deployment Dynamics Characteristic Analysis	121
5.5	Conclusion	131
6	Dynamics of Tethered Combination System	133
6.1	Introduction	133
6.2	Four-Bridle and Double-Rigid-Body Model	134
6.2.1	Basic Assumptions and Reference Frames	134
6.2.2	Dynamics Equation	136
6.2.3	Tension Solution	138
6.3	Dynamics Analysis of Tether-Tug Reorbiting	138
6.3.1	Parameters of Simulation	138
6.3.2	Reorbiting Process in Reference States	139
6.3.3	Influence of Initial Deviation on the Reorbiting Process	142
6.4	Conclusion	149
7	Ground and Airdrop Test	151
7.1	Introduction	151
7.2	Ejection in Homogenous Gravitational Field	152
7.3	Ground Test System	153
7.3.1	Ground Test Equipment	153
7.3.2	Powder Dosage Calculation	155
7.3.3	Analysis of Test Result	156
7.4	Ground Test of Mechanical Energy Storage Self-adaptive Net-Closing Mechanism	158
7.4.1	Single-Axis Mechanical Energy Storage Self-adaptive Net-Closing Mechanism	159
7.4.2	Double-Axis Mechanical Energy Storage Self-adaptive Net-Closing Mechanism	159
7.4.3	Test Conclusion	160
7.5	Airdrop Test	161
7.5.1	Test Equipment and Measurement System	161
7.5.2	Test Results and Experience Summary	162
7.6	Conclusion	165
